

Dell Healthcare Print Station

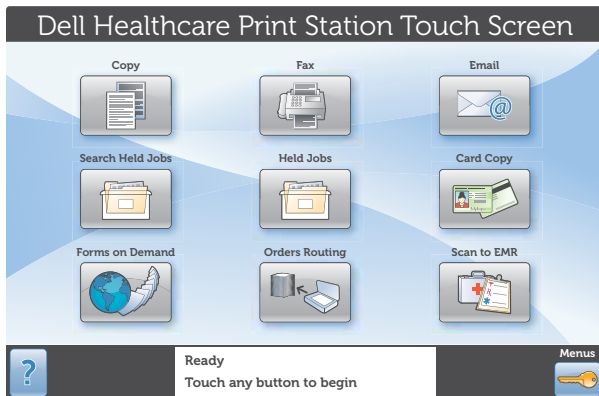

A one-touch solution that can help increase staff productivity, reduce medical errors, and improve patient care

Healthcare organizations are increasingly challenged to reduce medical errors and improve patient outcomes while cutting costs and boosting the productivity of clinical staff. The focus of many of these efforts is the nursing station – the busy crossroads where physician orders, patient care and facility management converge. With chronic nursing shortages and increasing job pressures, the need for new tools that increase staff productivity and free up more time for quality patient care has never been more critical.

A versatile, hard-working addition for busy nursing stations

The Dell Healthcare Print Station is a Dell multifunction printer (MFP) with features specifically designed for the healthcare profession. The solution is designed to free up precious space in nursing stations by combining the ability to print, copy, scan and fax into one efficient footprint. Custom healthcare functions are easily accessed through icons on the MFP's user-friendly touch screen, allowing clinical staff to complete complicated workflow processes easily.

Immediate access to a suite of powerful healthcare workflow solutions

Scan to EMR

Electronic Medical Records (EMR) systems can help reduce medical errors by capturing and storing patient information electronically, allowing physicians to quickly access critical information. With the Dell Healthcare Print Station's one-touch Scan to EMR feature, clinical staff can:

- Securely scan and route documents to network destinations.
- Scan patient updates into their EMR files in a timely fashion.
- Reduce turnaround time for accounts receivable with easy access to supporting documentation for insurance claims.

Physician Order Routing

Improving the medication order process is a top priority in virtually every healthcare organization. Unfortunately, fax machines are still commonly used to send handwritten physician's orders to the pharmacy or a lab for processing, which can lead to lost, delayed or inaccurate orders. The Dell Healthcare Print Station includes an integrated one-touch Orders Routing function that allows nursing staff and clinicians to:

- Securely route scanned physician orders from nursing stations to pharmacy utilizing the inherent IPsec security of the MFP.
- Automatically separate STAT orders from normal orders to facilitate faster processing.
- Integrate with leading medication order management systems.

Forms on Demand

Many healthcare facilities are moving away from expensive preprinted forms to storing frequently accessed documents online for printing on demand. However, clinical staff often do not have time to log in to a workstation, locate the document and submit a print job. Forms on Demand allows clinical staff to quickly access forms directly from their Dell Healthcare Print Station, making it easy to:

- Select and print documents right at the Dell Healthcare Print Station.
- Quickly assemble patient chart form sets.
- Ensure that the most current form versions are used.

The Dell 3333dn
Multifunction Printer

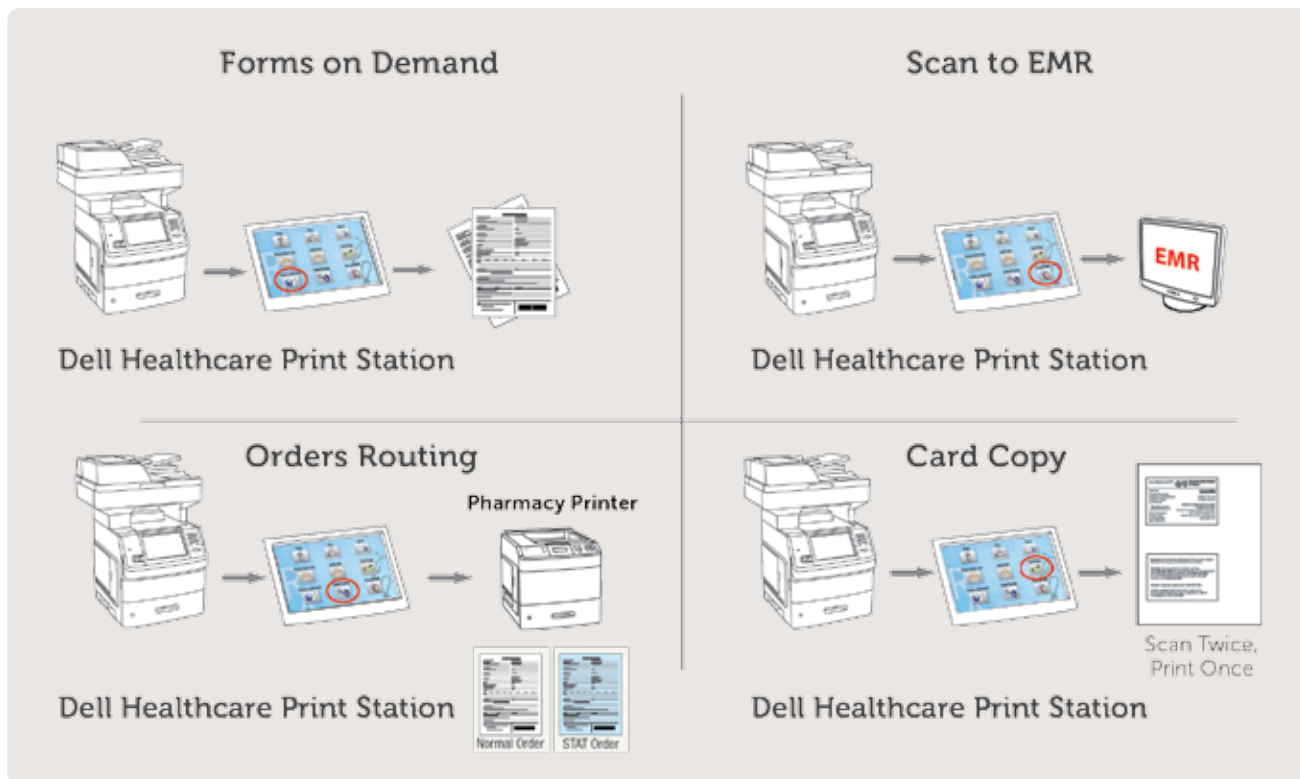

The Dell Healthcare Print Station is available as an option with the Dell 3333dn, 3335dn, and 5535dn Multifunction Printers

Card Copy

Patient insurance or identification cards are frequently copied and included with patient files. However, because the cards are typically two-sided, medical staff have to first make a copy of the front of the card, then make another copy for the back — an inefficient use of time and paper. The Card Copy solution allows staff to scan each side of the card and print both sides on one side of a single sheet of paper.

- Saves time.
- Saves paper.
- Helps improve legibility with enlarged format option.

Thanks to the Dell Healthcare Print Station's Embedded Solutions Framework, which allows Java-based applications to run directly on Dell MFPs, clinicians can save the expense of installing additional servers while enjoying these time-saving solutions.

Simple, efficient and cost-effective prior to CPOE, plus a platform for additional healthcare solutions

While most healthcare organizations are working to adopt Computerized Provider Order Entry (CPOE), acceptance by physicians and other hurdles are slowing the process. The Dell Healthcare Print Station not only functions as a productive, cost-effective interim solution prior to CPOE implementation, but can also serve as a back-up once CPOE is installed.

Put the Dell Healthcare Print Station to work at your healthcare facility

Dell's Healthcare Print Station can help your organization streamline processes, improve productivity and reduce medical errors. To put a Dell Healthcare Print Station to work in your facility, contact your Dell representative today or go to www.Dell.com/printers.
