

Storage / SAN Compatibility Guide For ESX Server 3.0.x

Last Updated: September 10, 2008

NOTE ESX Server 3.5 and ESX Server 3i information has been moved to the [Storage / SAN Compatibility Guide For ESX Server 3.5 and ESX Server 3i](#).

What's New

Changes since the last edition of this guide include:

- Added support for NetApp V3000 Series Data ONTAP 7.2.4. See ["NetApp,"](#) on page 40.
- Modified support information for FSC CX4-120, CX4-240, CX4-480 and CX4-960. See ["Fujitsu Siemens,"](#) on page 54.

Introduction

VMware ESX Server software has been tested and deployed in a variety of storage area network (SAN) environments. This guide describes the storage devices currently tested by VMware and its storage partners.

NOTE The use of an external enclosure, or JBOD connected to a supported SAS/SCSI controller in a supported server is supported, as long as there is no disk sharing among multiple servers or SAS/SCSI cards.

If you are having a technical issue with 3rd party HW/SW and it is not found on this list, please refer to our 3rd Party HW/SW support policy at <http://www.vmware.com/support/policies/ThirdParty.html>.

This document discusses the following topics:

- ["Maximum Storage Specifications Supported"](#) on page 2
- ["Third-Party Software"](#) on page 3
- ["Fibre Channel SANs"](#) on page 4
- ["Network Attached Storage"](#) on page 41

- [“iSCSI”](#) on page 44
- [“OEM SAN Array Model Reference”](#) on page 67

Maximum Storage Specifications Supported

The following system and virtual machine maximums are supported for ESX Server hosts:

Table 1. Supported system and virtual machine maximums

	ESX Server 3.x
Maximum LUNs per system	256 (128 during install)
Maximum HBAs per system	16 ports (4 quad-port cards, 8 dual-port cards, etc.)
Maximum virtual HBAs per virtual machine	4
Maximum targets per virtual HBA	15
Maximum virtual disks per Windows virtual machine	60
Maximum virtual disks per Linux virtual machine	60
Maximum number of VMFS file systems per server	256
Maximum disk space per VMFS	2TB * # of extents
Maximum file size per VMFS-3 file	Default max file size for VMFS-3 is 256GB (block size of 1MB). This can be configured to a block size of 8MB which will allow a 2TB file.
Maximum number of files per VMFS-3	Supports enough files to hold the maximum number of VMs per VMFS volume supported by ESX 3.0 (typically greater than 30,000 files)
Maximum number of paths per LUN	32
Maximum number of total paths	1024
Maximum number of targets per HBA	15
Minimum VMFS-3 volume size	1.1 GB

Third-Party Software

Third party backup, replication, and snapshot software is certified and supported by the providers of the software. The ESX Server 2.5 guide at http://www.vmware.com/pdf/esx25_san_cfg.pdf shows the list of software that was supported with ESX Server 2.5. Please contact your SAN vendors regarding their plans to support ESX Server 3.x. As vendors certify software, we will create a list of certified software for ESX Server 3.x.

Microsoft Cluster Service (MSCS) with ESX

Clustering refers to the use of Microsoft Cluster Services (Windows 2003 and 2000) in a shared disk configuration between two virtual machines or a virtual machine and a physical system.

Table 2. Microsoft Cluster Service (MSCS) with ESX

ESX Version	Windows OS	FC HBA Speed	Supported FC drivers
ESX Server 3.0	2000 SP4	2G	Default 2G
	2003 RTM	2G	
ESX Server 3.0.1	2000 SP4	2G	Rollback 2G
	2003 RTM	2G	Qlogic 7.04.00 Emulex 7.1.14
ESX Server 3.0.1 patches: ESX-2066306 ESX-3199476	2000 SP4	2G	Rollback 2G
	2003 RTM	2G	Qlogic 7.04.00 Emulex 7.1.14
	2003 SP1 ¹	2G	
	2003 R2 ¹	2G	
ESX Server 3.0.2	2000 SP4	2G&4G	Default unified 2G&4G
	2003 RTM	2G&4G	Qlogic: 7.07.04.2vmw Emulex: 7.3.2_vmw4
	2003 SP1 ¹	2G&4G	
	2003 R2 ¹	2G&4G	
	2003 SP2	2G&4G	
	2003 SP2 64bit ²	4G	Qlogic: 7.07.04.02.3vmw Emulex: 7.3.2_vmw4_1
ESX Server 3.0.3	2000 SP4	2G&4G	Default unified 2G&4G
	2003 RTM	2G&4G	Qlogic: 7.07.04.01.3vmw Emulex: 7.3.2_vmw10
	2003 SP1	2G&4G	
	2003 R2	2G&4G	
	2003 SP2	2G&4G	
	2003 SP2 64bit	4G	Qlogic: 7.07.04.01.3vmw Emulex: 7.3.2_vmw10

Table 2. Microsoft Cluster Service (MSCS) with ESX

ESX Version	Windows OS	FC HBA Speed	Supported FC drivers
¹ Requires Microsoft hotfix KB http://support.microsoft.com/kb/911030 .			
² Requires ESX Server 3.0.2 with Patch ESX-1003524 (build 81860 or later).			

Application-level clustering using MSCS on virtual machines is certified only with certain arrays listed in this guide. Before installing VMware ESX Server 3.0.x software with your storage array, please examine the lists on the following pages to find out whether your array and configuration are supported. Please refer to your storage vendor for more information.

Fibre Channel SANs

For Fibre Channel SANs, VMware tests the following configurations:

- **Basic Connectivity** — The ability of ESX Server 3.x hosts to recognize and interoperate with the storage array. This configuration does not allow for multipathing or any type of failover.
- **Multipathing** — The ability of ESX Server 3.x hosts to handle multiple paths to the same storage device.
- **HBA Failover** — In this configuration, the ESX Server 3.x host is equipped with multiple HBAs connecting to one or more SAN switches. The server is robust to HBA and switch failure only.
- **Storage Port Failover** — In this configuration, the ESX Server 3.x host is attached to multiple storage ports and is robust to storage port failures.
- **Clustering Support** — Clustering support applies to Windows 2000 SP4, Windows 2003 RTM, SP 1, R2 and SP 2. For ESX Server version requirements for these operating systems in cluster environment, please refer to <http://kb.vmware.com/kb/2021>. Clustering is supported only with a limited set of HBAs; please refer to the I/O Compatibility Guide (http://www.vmware.com/pdf/vi3_io_guide.pdf) for the list of HBAs not supported with MSCS.
- **Boot from SAN** — In this configuration, the ESX Server 3.x host boots from a LUN stored on the SAN rather than a local disk.
- **Direct Connect** — In this configuration, the ESX Server 3.x host is directly connected to the array (that is, no switch between HBA and the array). HBA and Storage Processor Failover is supported provided that there is no sharing of LUNs between multiple hosts. Clustering is not supported in this configuration.

In the following tables, an X in a table cell indicates the storage array or an equivalent configuration has been tested. All storage products listed in this compatibility guide are supported. For further details about array firmware, storage product configurations and best practices, please contact the storage vendor.

There are several items on the ESX Server 2.5.x SAN Compatibility Guide (http://www.vmware.com/pdf/esx_SAN_guide.pdf) that are not on this 3.x list. Please contact your storage vendors for plans regarding these items.

NOTE Unless otherwise footnoted, all fibre channel arrays are supported with both 2Gbit and 4Gbit connectivity.

VMware works closely with each of its OEMs to drive towards mutual support of ESX Server at the time of announcement. Due to different product release cycles, levels of testing, and OEM agreements, not all OEM devices will be supported at the general availability date of a new version of ESX Server. We recommend contacting the OEM vendor for the best information on when their device is planned to be certified with Virtual Infrastructure 3.

VMware supports Storage Virtualization Devices (SVD) with ESX Server 3.0.2 or later. See [“Storage Virtualization Device \(SVD\)”](#) on page 36 for more information.

See NOTE on page 1 for JBOD support information.																					
¹ MSCS supported with 2Gb HBAs using Qlogic 7.04.00 and Emulex 7.1.14 drivers only. Please refer to http://kb.vmware.com/kb/1560391 .																					
² MSCS supported with both 2Gb and 4Gb Fibre Channel HBAs on ESX Server ESX 3.0.2 or later. Please refer to http://kb.vmware.com/kb/1002304 .																					
³ Direct Connect and multipathing with HBA failover is supported.																					
⁴ Supported with Windows Server 2003 SP1 Enterprise Edition, Windows Server 2003 SP2 Enterprise Edition and Windows Server 2003 R2 Enterprise Edition. Supported with Windows 2000 SP4 and Windows 2003 RTM for 2G HBAs only.																					
⁵ Supported only for the open Fibre Channel ports on the arrays that are captive to NS20FC and NS40FC.																					
⁶ LUNs are not shared between Fibre Channel and iSCSI hosts.																					
⁷ The storage vendor is responsible for first level support.																					
⁸ Supported with Windows 2000 SP4, Windows 2003 SP1, SP2 and R1.																					
⁹ Support is only for the open FC ports on the arrays that are captive to NX4.

See **NOTE** on page 1 for JBOD support information.

Contact HDS for additional information, including HDS storage array microcode levels and the specific guest operating system, HBA, and switched fabric configurations that HDS supports.

¹ MSCS supported with 2Gb HBAs using Qlogic 7.04.00 and Emulex 7.1.14 drivers only. Please refer to <http://kb.vmware.com/kb/1560391>.

² Supported with Qlogic 2G HBAs and 7.04.00 driver only. Please refer to <http://kb.vmware.com/kb/1560391>.

³ MSCS supported with both 2Gb and 4Gb Fibre Channel HBAs on ESX Server 3.0.2 or later. Please refer to <http://kb.vmware.com/kb/1002304>.

⁴ Both internal and virtualized storage are supported. Refer to SVD section for details on virtualized storage support.

⁵ Supported with 2G Qlogic HBAs only.

See NOTE on page 1 for JBOD support information.																						
¹ MSCS supported with 2Gb HBAs using Qlogic 7.04.00 and Emulex 7.1.14 drivers only. Please refer to http://kb.vmware.com/kb/1560391 .																						
² Supported with Qlogic 2G HBAs and 7.04.00 driver only. Please refer to http://kb.vmware.com/kb/1560391 .																						
³ Support for 2Gb HBA only. Please refer to http://kb.vmware.com/kb/1560391 .																						
⁴ MSCS supported with both 2Gb and 4Gb Fibre Channel HBAs on ESX Server 3.0.2 or later. Please refer to http://kb.vmware.com/kb/1002304 .																						
⁵ Only supported with MRU failover policy

⁶ Limited to internal storage configurations only.

⁷ Both internal and virtualized storage are supported. Refer to SVD section for details on virtualized storage support.

⁸ Supported with 4G HBAs only.

⁹ Requires patch ESX-9865995 for correct failover operations.

¹⁰ Supported with Windows Server 2003 SP1 Enterprise Edition, Windows Server 2003 SP2 Enterprise Edition and Windows Server 2003 R2 Enterprise Edition.

¹¹ Supported with Windows Server 2003 SP1 Enterprise Edition, Windows Server 2003 SP2 Enterprise Edition and Windows Server 2003 R2 Enterprise Edition. Supported with Windows 2000 SP4 and Windows 2003 RTM for 2G HBAs only.

¹² Supported with Qlogic 7.07.04 and Emulex 7.3.2_vmw2 drivers or later versions.

¹³ Please refer to <http://kb.vmware.com/kb/1005009>.

Storage Virtualization Device (SVD)

VMware supports Storage Virtualization Devices (SVD) with ESX Server 3.0.2 or later.

- Backend storage arrays must be listed on both the *ESX Server 3.x Storage/SAN Compatibility Guide* (http://www.vmware.com/pdf/vi3_san_guide.pdf) and the SVD Vendor supported list.
- Do not share the same LUN of the backend storage array between SVD and any other host.

This section contains information on storage virtualization devices from the following vendors:

- “EMC Invista,” on page 36
- “Hewlett Packard,” on page 37
- “Hitachi, Ltd.,” on page 38
- “Hitachi Data Systems (HDS),” on page 39
- “IBM,” on page 39
- “NetApp,” on page 40
- “Nihon Unisys, Ltd.,” on page 40
- “Sun,” on page 41

³ ESX Server 3.0.2 Update 1 is required for ESX Server 3.0.2.

Network Attached Storage

This section contains information on the support for network attached storage with ESX Server software.

NOTE MSCS clustering is not supported with NAS.

The following sections are included:

- [“Supported Linux Distributions”](#) on page 41
- [“Supported Storage Devices”](#) on page 42

Supported Linux Distributions

The following Linux distributions support network attached storage when used with ESX Server 3.x software:

- Red Hat Enterprise Linux 3 NFS Server (Update 5).
- Fedora Core 4 NFS Server (2.6.12-1.1456_FC4.9550smp).
- Fedora Core 6 NFS Server (2.6.18-1.2798.fc6 #1 SMP) for ESX Server 3.5 only.

Supported Storage Devices

This section lists all of the supported devices for network attached storage with ESX Server 3.x software from the following vendors:

- [“Adaptec,”](#) on page 42
- [“Fujitsu,”](#) on page 42
- [“IBM”](#) on page 43
- [“Isilon Systems,”](#) on page 43
- [“NetApp”](#) on page 43
- [“EMC”](#) on page 44

NOTE Celerra models noted are family names and cover all model numbers and model types (integrated and gateway) within the family.

iSCSI

VMware supports the iSCSI Storage listed in this section.

The following maximums are in place when using iSCSI arrays with ESX Server hosts:

Table 43. Storage parameter maximums with iSCSI Arrays

Parameter	Initiator type used	Limit
Number of HBAs	software	1
	hardware	1 dual port or 2 single port
Maximum number of targets	both software and hardware initiator	64
Number of LUNs	both software and hardware initiator	254
Number of paths to storage	software	4
	hardware	8

VMware supports connections to iSCSI arrays using either the software initiator in the kernel or a hardware initiator (iSCSI HBA). Please refer to the *I/O Compatibility Guide* at http://www.vmware.com/pdf/vi3_io_guide.pdf for a list of hardware initiators that can be used with ESX.

The following configurations are supported for iSCSI storage with the software initiator over a supported NIC:

- **iSCSI Base Connectivity** – The ability of an ESX Server host to recognize the target and interoperate with it.
- **SP failover** – In this configuration the ESX Server host is attached to multiple ports and is robust to storage port failover
- **NIC failover for software initiator** – If the Ethernet adapters are teamed and one fails, the other one takes over. Both adapters must be connected to the same physical switch and be on the same subnet (both NICs and iSCSI storage ports).

The following configurations are supported for iSCSI storage with hardware initiators:

- **iSCSI Base Connectivity** – The ability of an ESX Server host to recognize the target over an iSCSI HBA and interoperate with it.
- **SP failover** – In this configuration, ESX Server host is attached to multiple ports over an iSCSI HBA and is robust to storage port failover.
- **Boot from iSCSI** – In this configuration, ESX Server hosts boot from the target iSCSI array rather than from a local disk.
- **iSCSI hardware initiator failover** – The ESX server host is equipped with multiple hardware initiators and is robust to hardware initiator failover.

NOTE Clustering is not supported with iSCSI.

NOTE Software initiated iSCSI is supported fully in ESX 3.0 and later releases. Hardware initiated iSCSI is supported in experimental mode only in ESX 3.0. It is supported fully in ESX 3.0.1 with iSCSI arrays that have been qualified/certified for use with the hardware initiators.

iSCSI Storage devices from the following manufactures have been tested for the stated release of ESX Server 3.x:
