

Services

Dell Mobility Services: Mobility Custom Applications

From platform capability to custom built...

- Sometimes, all you are looking for is simply a one-off application for a specific area of the business
- Sometimes, existing ready-made application suites are just not right for your organization, even if minor or major changes can be made
- Most times you don't have the experience, tools or time to commit your own teams to design and build a tailored solution

The Custom Solution

Dell can develop custom application solutions to help organizations not only mitigate the IT challenges associated with mobility, but also embrace and capitalize on this new business dynamic.

We will conduct a full end to end review of your mobility strategy, drilling in to the specific requirements that your business needs to take you well beyond off-the-peg solutions

Dell's proven methodology and experience will ensure you get what you need and not just what a standard application is able to deliver.

If your mobile application needs truly are unique, then Dell can build a custom mobile application.

End to End Custom Application Development Services with Ongoing Support

Within the Framework of Your IT Mobility Strategy

1. Full assessment of your specific requirements
2. Agree preferred architecture and design
3. Full development of solution(s)
4. Full testing and deployment
5. Appropriate transition and support

Core Capabilities
