## WINDOWS 7 IS HERE

The next-generation Operating System (OS) from Microsoft, Windows 7, is designed to be the most secure, highest quality Windows® release to date. Microsoft has made many incremental improvements and a few big ones, that provide a product that requires less waiting, fewer clicks, and less complexity. Windows 7 offers new and enhanced features in security, performance, manageability and is designed to support compatibility, standardization and management across systems. By upgrading to Windows 7, you can experience enhanced productivity and advanced security which can translate to cost savings and revenue growth for your business.

To capitalize on the benefits of Windows 7, your environment must be ready for the upgrade. What percentage of your applications will need upgrading? Is your infrastructure prepared for the new security features? How much end-user training will be required?
