ALIENWARE®

Best Gaming Desktop Brand

Alienware Aurora

As far as branded desktop PCs go, the Alienware Aurora is one of the few that actually gets it right. With the Aurora, you can customize the PC to house Intel's top-of-the-line Skylake CPU, as much as 32GB of DDR4 RAM, and anything from an entry-level NVIDIA GeForce GTX 950 to NVIDIA's latest Pascal-powered GeForce GTX 1070.

Alienware 13

With NVIDIA's Pascal now part of the mainstream consciousness, premium gaming notebooks such as the Alienware 13 are now more than capable of outputting desktop-level graphics fidelity. With its thinner form factor and the option for a 13.3-inch QHD OLED display, this notebook is decked out with an Intel Core i7-6700HQ CPU, up to 32GB DDR4 RAM, super-fast NVMe SSD storage, and the powerful GeForce GTX 1060 with 6GB of GDDR5 VRAM.
