# Power your business with a Dell Precision workstation that is certified.

What does it mean for a Dell Precision™ workstation to be certified?

To you, it means peace of mind knowing that Dell works with many ISVs to provide an exceptional, seamless user experience. To Dell, it means hundreds of engineering man-hours and rigorous testing that have been poured into Dell Precision workstations to optimize performance and reliability with leading industry applications. The result is a fine-tuned machine running at peak performance that brings you a level of confidence you trust and value.

"You want hardware that's been certified. When you've installed 3ds Max on the Dell Precision, you have the default environment that you know Autodesk has envisioned."

— Beau Perschall,
VP of Business Development

It's a solution to a problem you may not even know you have.

Put a certified Dell workstation to work for you.

In order to succeed in an increasingly competitive market, you demand scalable software, improved workflows and the resulting productivity gains. If you've implemented a consumer-based or office-productivity product for what is clearly a workstation application, you may not even realize how much performance you are losing. A certified Dell Precision workstation can provide the scalability, workflow and productivity that you need, and more.

How do you know if a certified Dell workstation is what your business needs?

1. Does your business manage or create complex graphics/designs or perform data-intensive calculations?

2. Does your business rely on specific, often high-powered, software to function?

3. Does running this data-intensive software require a high-performance system — one designed for office, datacenter or mobile environments?

If you answer "yes" to any of the criteria above, your business needs a certified Dell workstation.

Find out more about certified Dell Precision workstations. Visit www.dell.com/Precision

"Certification doesn't just mean that we've validated a workstation. It means that not only have we validated it, but we will do everything necessary to support you — and what you're using the workstation for — all the way to the end."

— Diego Esteves,
Dell Certification
System Engineer
