# Eliminate barriers to innovation and improve productivity with on-demand cloud hosting services.

Dell Cloud On Demand with ScaleFlex

Use our on-demand cloud hosting services to quickly execute jobs, handle out-of-the-ordinary computational projects and gain a strategic resource.

Support new initiatives and enable cutting-edge technologies

Most enterprises restrict mission-critical applications to a limited set of resources, which leads to project delays, missed opportunities and huge financial losses. With insufficient internal compute capacity and fluctuating demand, it can be difficult to get the resources you need, when you need them. Now you can pay as you go, on an actual resource-usage basis, for virtually unlimited, on-demand computing capabilities.

Developed by Dell Services and ScaleMatrix, the ScaleFlex cloud platform is ideally suited to support test and development projects, on-demand compute needs or budget-conscious hosting requirements. ScaleFlex is an instance-based, hourly billed, cloud computing service that provides your users with the ability to spin up a variety of pre-established and variable capacity cloud instances on demand.

Your organization can support new initiatives and application development, or enable rapidly-changing IT projects with on-demand and usage-billed ScaleFlex cloud hosting services. Choose from a variety of virtual machine (VM) and operating system blueprints, or select a flexprint profile that customizes compute and RAM resources as needed. Once deployed, VMs boot quickly and are presented with attached storage resources. ScaleFlex deployments include 1,500GB of bandwidth and make a cost-effective hosting platform for your business.

Dell Cloud On Demand with ScaleFlex provides:

- **Cost savings:** Eliminate expenditure on expensive hardware, software and servers. Get access to all the business applications you need, and store your data on our cloud servers.
- **Simplicity:** Benefit from a smoother work experience for your business. By handling all the updates, upgrades, hardware and daily operations, our cloud technology ensures that everything is up to date.
- **Flexibility:** Adjust the services you use and how you use them at any time, depending on your business requirements.

Key features

- Secure web portal to access ScaleFlex cloud hosting services from anywhere
- Ready-to-launch blueprints or a customizable flexprint profile on demand
- Variety of Windows and Linux templates that support hosted applications
- Rapid booting of VMs that are billed on an hourly basis
- Enhanced performance and availability compared to traditional hyperscale providers

Key benefits

- Get 24x7x365 white-glove personalized support
- Save time with quick and easy deployment on demand
- Make special projects and testing affordable with a variety of compute choices
- Gain business agility and operational efficiency with rapid implementation
- Get up and running fast with pre-configured blueprint images
- Take advantage of an ideal sandbox for test and development efforts
