Comprehensive quality improvement and regulatory compliance measures

The heart of effective quality improvement is real-time access to clinical metrics that provide feedback on performance. The faster and more efficient your system is at analyzing, reporting and disseminating clinical data, the faster your quality improvement cycles will be.

Today, there is an increased focus on care quality and new regulatory requirements — such as Stage 2 meaningful use, Physician Quality Reporting System (PQRS), Healthcare Effectiveness Data and Information Set (HEDIS), Joint Commission, patient-centered medical home (PCMH), value-based purchasing measures and readmission management. Providers need quality and compliance reporting that is actionable, scalable and flexible enough to adapt to the evolving regulatory environment.

Dell Quality Improvement Compliance Reporting Analytics for Healthcare can help you quickly analyze the data and provide easy-to-understand reports that are disseminated automatically to the people who need them. Our solution can also improve the speed and accuracy of compliance reporting through automated data integration and analytics.

Whether you need an enterprise-wide analytics solution or individual tools for specific analytic needs, Dell can help. With our extensive experience in the clinical, financial and operational aspects of healthcare, we can help you increase the effectiveness of your quality improvement efforts and reduce the cost and labor associated with compliance reporting.

Key benefits:

- Actionable information provided at the right point of care to help physicians improve performance on key quality measures
- Adaptable platform to support various quality programs and reporting requirements
- Powerful rules engine to configure custom clinical measures and key performance indicators
- Support for multiple standards and clinical terminologies
- Complete coverage of Stage 2 meaningful use quality measures, PQRS, HEDIS and measures for risk-based contracts and incentive programs
End-to-end capabilities
We start with data integration and management services to ensure the data you need is available to the analytics engine. We can provide an enterprise-wide analytics platform or, if you already have a platform, provide the tools and software you need to effectively analyze and report quality data. Our reporting services can help you with:

- Data aggregation
- Reporting for meaningful use
- Utilization management
- Accountable care organizations quality reporting
- PCMH scorecards
- Quality reporting for the Joint Commission on Accreditation of Healthcare Organizations and Joint Commission International
- PQRS and HEDIS reporting and compliance

Healthcare subject matter expertise
Having an analytics partner who understands the clinical, financial and operational aspects of healthcare can help you maximize the effectiveness of your program. With years of experience working with healthcare providers and health plans, we have the depth of knowledge needed to help you design an effective analytics program and put your insights into action.
