Cloud Client Manager

Simplified, secure management.
Empowered users.

Securely embrace user mobility & BYOD with corporate owned devices, apps and content

Wyse Cloud Client Manager (CCM) allows you to securely manage your thin clients, mobile devices, mobile workspaces, Dell Edge Gateways and employee access to corporate applications and content all from a single cloud-based console. It offers comprehensive over-the-air (OTA) asset, configuration and policy management for Wyse thin and zero clients and iOS and android-based mobile devices.

At a glance features:

The web based console provides four core areas of functionality:

- Systems Management
- App & Content Management
- User Self-Service Portal
- Real-time Reporting, Alerts & Analytics
- Secure, Scalable, Multi-tenant SaaS Service

Cloud Client Manager provides a unified, user-centric platform and intuitive administrator dashboard with real-time alerts and detailed audit trail. Featuring simple group-based management, across a large variety of users and devices,

Solution Overview

Cloud Client Manager is a software as a service offering to securely manage end-user devices, applications and content from a single, simple console while empowering end users with policy-driven self-service capability.

Leading cloud platform.

The cloud-based, multi-tenant console is available from anywhere on any device with a browser and internet access. It features role-based administration for segregation of duties between IT admins and group-based management of end users that fully integrates with Active Directory.

Key Features Dell Cloud Client Management IoT Portal is available for free trial now; fully featured for licensing in April 2016

- Configure and manage thin clients and mobile devices like the Edge Gateway from anywhere*

- Securely manage access to IoT devices and end-points via the Edge Gateway

- Get real-time alerts, troubleshooting and audit trails

- Monitor user devices, track asset and application inventory and enforce policy compliance

- Help create consistent data protection and uniform policy compliance across all user devices.

- Enable user self-service provisioning for devices and corporate resources

- Enforce mobile application policies and monitor compliance.

- Maintain a complete mobile application inventory across your end users' mobile devices.

- Help create consistent data protection and uniform policy compliance across all user devices.

- Delegate supervision to a group administrator to manage at the group level (global administrator).

- Maintain a complete mobile application inventory across your end users' mobile devices.

- Enhanced security and auditing though two-factor authentication.

- Ability for global administrator to delegate supervision to a group administrator to manage at the group level.

- Intuitive app management experience for Mandatory, Restricted and Recommended Apps – for iOS, Android & Windows Phones.

- Auto-discovered devices can be automatically placed in the quarantine folder where the admin can select where and what policies are applied in production environment.

- Administrators can define automated remediation actions allowing them to set rules, in the event a device or user violates a mobile policy – for iOS, Android & Windows.

* Supports iOS and Android mobile devices and Wyse ThinOS thin and zero clients.
