IX. PERFORMANCE DATA

Energy Consumption⁴

Service Level	Energy Consumption (Wattage)	BTU Calculation	Description of Service Level
Active / Printing	18	61.56	The power state in which the product is connected to a power source and is actively producing output, as well as performing any of its other primary functions
Ready Mode	8.17	27.94	The condition that exists when the product is not producing output, has reached operating conditions, has not yet entered into any lower-power modes, and can enter Active mode with minimal delay
Sleep Mode	4.03	13.78	The reduced power state that the product enters automatically after a period of inactivity. In addition to entering Sleep automatically, the product may also enter this mode 1) at a user set time-of-day, 2) immediately in response to user manual action, without actually turning off, or 3) through other, automatically-achieved ways that are related to user behavior.
Standby	0.37	1.27	The lowest power consumption mode which cannot be switched off (influenced) by the user and that may persist for an indefinite time when the product is connected to the main electricity supply and used in accordance with the manufacturer's instructions ¹ . Standby is the product's minimum power mode.
Copying Mode	12	41.04	The system is copying.
Scan Mode	8.5	29.07	The system is scanning to PC.
Off	0.37	1.27	The power state that the product enters when it has been manually or automatically switched off but is still plugged in and connected to the mains.
External Power Supply	0.2	0.68	AC adapter is connected to mains with system detached otherwise known as "No-load" condition
