Unable to complete the erase operation on the non-volatile DIMM with serial number arg1 in slot arg2 .

Message

Arguments arg1 = serial number arg2 = slot number

Detailed Description The erase operation could not be completed for the DIMM identified in the message.

MEM9073

Message	Unable to update firmware on a Non-Volatile Dual In-line Memory Module (NVDIMM) device in the slot arg1 .
Arguments	arg1 = location
Detailed Description	Unable to update firmware for the NVDIMM identified in the message.
Recommended Response Action	Retry the operation. If the issue persists, replace the NVDIMM, or contact your service provider. It is also recommended that the system be upgraded to the latest BIOS.

Fabric Event Messages

NFAB0001

Message	The health status of SmartFabric arg1 is ok.
Arguments	arg1 = fabric ID
Detailed Description	The health status of SmartFabric identified in the message is ok.
Recommended Response Action	No response action is required.
Category	System Health (NFAB = Fabric)
Severity	Informational
Redfish Event Type	
	No alerts are applicable for this message

NFAB0002

Message	The health status of SmartFabric ID arg1 is in Warning condition.
Arguments	arg1 = fabric ID
Detailed Description	The health status of SmartFabric identified in the message is in Warning condition.

Recommended Response Action Make sure that there are no ongoing maintenance activities on the following: 1) MCM Group 2) Management Module 3) SmartFabric 4) I/O Module. Make sure that the I/O Module management interface configuration and physical connections are appropriate for the model of I/O module. Make sure that all I/O Modules in the fabric are healthy.

Category System Health (NFAB = Fabric)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

NFAB0003

Message The health status of SmartFabric ID arg1 is in Critical condition.

Arguments arg1 = fabric ID

Detailed Description The health status of SmartFabric identified in the message is in Critical condition.

Make sure that the I/O Module, management interface configuration, and physical connection are appropriate for the node. Also, make sure that the maintenance activities on the following are completed before proceeding further: 1) Ongoing MCM Group maintenance 2) Management Module 3) Fabric 4) Node. For more information, see the Fabric Health issue list.

Recommended Response Action

Category System Health (NFAB = Fabric)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NFAB0004

Message The SmartFabric ID arg1 is valid.

Arguments arg1 = fabric ID

Detailed Description The SmartFabric identified in the message is valid. The SmartFabric validation criteria such as design, fabric node inventory, I/O module placement requirements, and inter-node connectivity are consistent.

Recommended Response Action No response action is required.

Category System Health (NFAB = Fabric)

Severity Informational

Redfish Event Type

No alerts are applicable for this message

NFAB0005

Message	The SmartFabric ID arg1 is invalid.
Arguments	arg1 = fabric ID
Detailed Description	The SmartFabric identified in the message is invalid. The SmartFabric validation criteria such as design, fabric node inventory, I/O module placement requirements, and inter-node connectivity are inconsistent.
Recommended Response Action	For more information about the configuration, inventory, and placement requirements, see the predefined System Architecture documentation available on the support site.

No alerts are applicable for this message

NFAB0011

Message	Unable to validate the SmartFabric because the I/O Modules are different models.
Detailed Description	The SmartFabric cannot be validated because the I/O Modules are different models.
Recommended Response Action	Make sure that all the I/O Modules are the same model and retry the operation.
Category	Audit (NFAB = Fabric)
Severity	Critical
Redfish Event Type	
	No alerts are applicable for this message

NFAB0012

Message	Unable to validate the SmartFabric because the VLTi cable for link arg1 is not connected as per fabric design arg2 .
Arguments	arg1 = Design Link arg2 = Design
Detailed Description	The SmartFabric cannot be validated because the VLTi cable is not connected to the correct port as per the selected fabric design.
Recommended Response Action	Make sure that the VLTi cables are connected to the correct ports as per the selected fabric design.
Category	Audit (NFAB = Fabric)
Severity	Critical
Redfish Event Type	
	No alerts are applicable for this message

NFAB0013

Message	Unable to validate the SmartFabric because the fabric design arg1 is unavailable.
Arguments	arg1 = Design
Detailed Description	The SmartFabric cannot be validated because the fabric design is unavailable.
Recommended Response Action	Make sure that the correct fabric design information is provided and retry the operation.
Category	Audit (NFAB = Fabric)
Severity	Critical
Redfish Event Type	
	No alerts are applicable for this message

NFAB0014

Message	The SmartFabric is not healthy because the I/O Module arg1 is not healthy.
Arguments	arg1 = Node ID
Detailed Description	The SmartFabric is not healthy because the I/O Module identified in the message is not healthy.
Recommended Response	
Action	Fix the health of the I/O Module.
Category	Audit (NFAB = Fabric)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

NFAB0015

Message	The SmartFabric is not healthy because the I/O Module arg1 is offline or can not be communicated with.
Arguments	arg1 = Node Id
Detailed Description	The SmartFabric is not healthy because the I/O Module identified in the message is offline or cannot be communicated with.
Recommended Response	
Action	Make sure that the I/O Module is online and healthy.
Category	Audit (NFAB = Fabric)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

NFAB0016

Message	The SmartFabric is not healthy because interface arg1 for uplink arg2 is not in operational status.
Arguments	arg1 = Interface Name arg2 = Uplink Id
Detailed Description	The SmartFabric is not healthy because the interface for an uplink mentioned in the message is not in operational status.
Recommended Response	
Action	Make sure that all the uplink interfaces are in operational status.
Category	Audit (NFAB = Fabric)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

NFAB0017

Message	The fabric is not healthy because one or more VLTi links are not connected.
Detailed Description	The SmartFabric is not healthy because one or more VLTi links are not connected.
Recommended Response Action	Make sure that the VLTi cables for all ISLs are connected and operational as per the selected fabric design.
Category	Audit (NFAB = Fabric)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

NFAB0018

Message	The SmartFabric is not healthy because at least one uplink must be configured.
Detailed Description	The SmartFabric is not healthy because at least one uplink must be configured.
Recommended Response Action	Make sure at least one uplink is configured for the SmartFabric.
Category	Audit (NFAB = Fabric)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

NFAB0019

Message	The SmartFabric is not healthy because the uplink arg1 interface arg2 is not bonded to the other interfaces in the uplink.
Arguments	arg1 = Uplink Id arg2 = Interface Id
Detailed Description	The SmartFabric is not healthy because one or more of the uplink interfaces are not bonded.
Recommended Response Action	Make sure that the Link Aggregation Control Protocol (LACP) is enabled on all ports on the remote switch to which the uplink ports from the fabric are connected.
Category	Audit (NFAB = Fabric)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

NFAB0020

Message	The SmartFabric is not healthy because the configuration of uplink arg1 across the fabric switches is asymmetrical.
Arguments	arg1 = Uplink Id
Detailed Description	The SmartFabric is not healthy because the configuration of the uplink identified in the message is not symmetrical across the fabric switches.
Recommended Response Action	Make sure the configuration for the uplink is symmetrical across the fabric switches.

Interface Event Messages

NINT0001

Message	The interface arg1 is in operational status.
Arguments	arg1 = interface ID
Detailed Description	The interface identified in the message is in operational status.
Recommended Response Action	No response action is required.
Category	Audit (NINT = Interface)
Severity	Informational
Redfish Event Type	
	No alerts are applicable for this message

NINT0002

Message	The interface arg1 is not operational.
Arguments	arg1 = interface ID
Detailed Description	The interface identified in the message is not operational.
Recommended Response Action	Confirm the interface configuration and the associated physical port connectivity to determine the operational status of the interface.
Category	Audit (NINT = Interface)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

Link Event Messages

NLIN0001

Message	The link between Source arg1 and Destination arg2 is created.
Arguments	arg1 = source interface ID arg2 = destination interface ID
Detailed Description	The link between Source and Destination identified in the message is created.

Recommended Response Action No response action is required.

Category Audit (NLIN = Link)

Severity Informational

Redfish Event Type

No alerts are applicable for this message

NLIN0002

Message The link arg1 is successfully deleted.

Arguments arg1 = Source Interface ID

Detailed Description The link identified in the message is successfully deleted.

Recommended Response Action No response action is required.

Category Audit (NLIN = Link)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

Node Event Messages

NNOD0001

Message The I/O Module arg1 is operational.

Arguments arg1 = Node ID

Detailed Description The I/O Module identified in the message is operational.

Recommended Response Action No response action is required.

Category System Health (NNOD = Node)

Severity Informational

Redfish Event Type

No alerts are applicable for this message

NNOD0002

Message The operational status of I/O Module arg1 might have ended.

Arguments arg1 = Node ID

Detailed Description	The operational status of the I/O Module identified in the message has ended. Possible reasons could be that the MCM Group maintenance is in progress or Management Module maintenance is in progress or Fabric maintenance is in progress or Node maintenance is in progress.
Recommended Response Action	Make sure that the I/O Module, management interface configuration and physical connectivity are appropriate for the node. Also ensure that all the ongoing MCM Group maintenance and Management Module maintenance and Fabric maintenance and Node maintenance have completed before proceeding further.
Category	System Health (NNOD = Node)
Severity	Warning
Redfish Event Type

NNOD0003

Message	The I/O Module arg1 is discovered.
Arguments	arg1 = Node ID
Detailed Description	The I/O Module identified in the message is discovered.
Recommended Response Action	No response action is required.
Category	Audit (NNOD = Node)
Severity	Informational
Redfish Event Type	
	No alerts are applicable for this message

NNOD0004

Message	Unable to detect the I/O Module arg1 because of physical connection and operational issues.
Arguments	arg1 = Node ID
Detailed Description	The I/O Module identified in the message cannot be detected because of physical connection and operational issues.
Recommended Response Action	Make sure that the physical presence and operations of the I/O Module are correct.
Category	Audit (NNOD = Node)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

NNOD0005

Message	The MX7116n Fabric Expander Module arg1 is discovered.
Arguments	arg1 = spinner ID
Detailed Description	The MX7116n Fabric Expander Module identified in the message is discovered.
Recommended Response Action	No response action is required.
Category	Audit (NNOD = Node)
Severity	Informational
Redfish Event Type	
	No alerts are applicable for this message

NNOD0006

Message	Unable to detect the MX7116n Fabric Expander Module arg1 because of physical connection issues.
Arguments	arg1 = spinner ID
Detailed Description	The MX7116n Fabric Expander Module identified in the message cannot be detected because of physical connection issues.
Recommended Response Action	Make sure that the MX7116n Fabric Expander Module is properly connected.
Category	Audit (NNOD = Node)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

NNOD0007

Message	Unable to perform a simple I/O module swap operation because the replacement I/O module software version arg1 is different from the fabric software version arg2 .
Arguments	arg1 = software version arg2 = software version
Detailed Description	A simple I/O module swap operation cannot be performed because the replacement I/O module software version is different from the fabric software version as identified in the message.
Recommended Response Action	Make sure that the software versions of replacement I/O module and fabric are the same.
Category	Audit (NNOD = Node)
Severity	Warning

Redfish Event
Type

No alerts are applicable for this message

NNOD0008

Message The Restore operation of the I/O Module arg1 is not started because the node is offline.

Arguments arg1 = IOM Name

Detailed Description IO Module identified in the message is OFFLINE in Fabric Manager during Smart Fabric restore operation, Fabric might be restored as unhealthy state.

Recommended Response Action Once OME-M restore is completed, Verify and ensure the following: 1) Node is correctly inserted in the slot. 2) make the IO Module identified in the message online by performing a power on or power cycle activity for the IO Module.

Category Configuration (NNOD = Node)

Network Partition Event Messages

NNPA0002

Message Unable to create or enable the server profile because the user is not allowed to configure both SharedLOM native VLAN and SharedLOM tagged VLAN Networks attributes.

Detailed Description This error is returned if the Server profile is configured both SharedLOM native VLAN and SharedLOM tagged VLAN Networks attributes.

Recommended Response Action Enter either SharedLOM native VLAN or SharedLOM tagged VLAN Networks configurations for Server profile partition.

Category Configuration (NNPA = Network Partition)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

NNPA0003

Message Unable to create or deploy the server interface profile because native VLAN or tagged VLAN configuration is not allowed on the parent port if nPar partitioning is enabled.

Detailed Description The server interface profile cannot be created or deployed because either native VLAN or tagged VLAN configs are present in the payload for the parent interface when nPar partitioning is enabled.

Recommended Response Action Make sure to remove the native VLAN or tagged VLAN Configurations in the payload for the parent interface, if nPar partitioning is enabled, then retry the operation.

Category Configuration (NNPA = Network Partition)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

NNPA0004

Message Unable to create or enable the server profile because the more than one nPar-parent-tagged network cannot be configured at a time.

Detailed Description The server profile cannot be created or enabled because the more than one nPar-parent-tagged network cannot be configured at a time.

Recommended Response Action Retry the operation by configuring only one nPar-parent-tagged network in the server profile.

Category Configuration (NNPA = Network Partition)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

NNPA0005

Message Unable to create or deploy the server profile or server interface profile because the network type (FCoE) of native VLAN or tagged VLAN network is not supported for Network Partitions (NPAR).

Detailed Description The server profile or server interface profile cannot be created or deployed because the network type (FCoE) of native VLAN or tagged VLAN network is not supported for Network Partitions (NPAR).

Recommended Response Action Make sure to configure the native VLAN or tagged network with supported network type and then retry the operation.

Category Configuration (NNPA = Network Partition)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

NNPA0006

Message Unable to create the partition interface because the properties of native VLAN and tagged VLAN of the partition interface are the same.

Detailed Description The partition cannot be created because the properties of native VLAN and tagged VLAN of the partition interface are the same.

Recommended Response Action: Enter a valid and unique ID for native and tagged VLANs and retry the operation.

Category: Configuration (NNPA = Network Partition)

Severity: Warning

Redfish Event Type

No alerts are applicable for this message

NNPA0007

Message: Unable to create or deploy the server interface profile because untagged VLAN configuration is not allowed on the parent interface if nPar partition is enabled.

Detailed Description: The server interface profile cannot be created or deployed because an untagged VLAN config is present in the payload for the parent interface when nPar partitioning is enabled.

Recommended Response Action: Make sure to remove the untagged VLAN config in the payload for the parent interface if nPar partitioning is enabled, then retry the operation.

Category: Configuration (NNPA = Network Partition)

Severity: Warning

Redfish Event Type

No alerts are applicable for this message

NNPA0008

Message: Unable to configure the invalid tagged VLAN network ID in the server profile and server interface profile because the network partition is enabled.

Detailed Description: The Invalid tagged VLAN network ID cannot be configured in the server profile and server interface profile because the network partition is enabled.

Recommended Response Action: Configure valid tagged VLAN network ID in the server profile and server interface profile.

Category: Configuration (NNPA = Network Partition)

Severity: Warning

Redfish Event Type

No alerts are applicable for this message

NNPA0009

Message: Unable to update the server interface profile because the Network Partition (NPAR) count in the existing server interface profile is not same as the NPAR count in the new server interface profile.

Detailed Description	The server interface profile cannot be updated because the Network Partition (NPAR) count in the existing server interface profile is not same as the NPAR count in the new server interface profile.
Recommended Response Action	In the PUT query payload request, enter Network Partition (NPAR) IDs same as the existing server interface profile, and then retry the operation.
Category	Configuration (NNPA = Network Partition)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

NNPA0011

Message	Unable to create or update the server interface profile along with partitions because the partition ID sequence is invalid.
Detailed Description	The server interface profile along with partitions cannot be created or updated because the partition ID sequence is invalid.
Recommended Response Action	Enter a valid partition ID sequence and retry the operation. The partition ID must start with 1 as the first number.
Category	Configuration (NNPA = Network Partition)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

NNPA0012

Message	Unable to configure Maximum Transmission Unit (MTU) on the interface arg1 because the interface is of the Network Partitions (NPAR) type.
Arguments	arg1 = Interface Name
Detailed Description	The Maximum Transmission Unit (MTU) cannot be configured on the specified interface because it is of the Network Partitions (NPAR) type.
Recommended Response Action	Select a different interface type and retry the operation.
Category	Configuration (NNPA = Network Partition)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

NNPA0013

Message	Unable to configure the Breakout property on the port-group or interface arg1 because either the child interface of the port-group or the interface is partitioned.
Arguments	arg1 = Interface Name
Detailed Description	The breakout property on the port-group or interface identified on the message cannot be configured because either the child interface of port-group or the interface is partitioned.
Recommended Response	
Action	Remove the partition configurations and retry the operation.
Category	Configuration (NNPA = Network Partition)
Severity	Warning
Redfish Event Type	

No alerts are applicable for this message

Server Event Messages

NSER0001

Message	The server arg1 is detected.
Arguments	arg1 = Server ID

Redfish Event Type

No alerts are applicable for this message

NVFA0002

Message Unable to configure the fabric because the Fabric Node arg1 does not exist.

Arguments arg1 = node ID

Detailed Description The fabric cannot be configured because the fabric node identified in the message is not present.

Recommended Response Action

Enter a valid fabric node and retry the operation again.

Category Configuration (NVFA = Fabric)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVFA0003

Message Unable to retrieve fabric because the fabric does not exist.

Detailed Description The fabric cannot be retrieved because the fabric does not exist.

Recommended Response Action

Enter a valid fabric and retry the operation.

Category Configuration (NVFA = Fabric)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVFA0004

Message Unable to configure fabric with the given Node arg1 because the node is already part of another fabric arg2 .

Arguments arg1 = node ID arg2 = fabric ID

Detailed Description The fabric cannot be configured because the node mentioned in the message is already part of another fabric.

Recommended Response Action

Create the fabric with a different node which is not part of any existing fabric and retry the operation.

Category Configuration (NVFA = Fabric)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVFA0005

Message Unable to configure fabric design because the fabric design arg1 does not exist.

Arguments arg1 = fabric design

Detailed Description The fabric cannot be configured because the fabric design identified in the message does not exist.

Recommended Response Action

Enter a valid fabric design and retry the operation again.

Category Configuration (NVFA = Fabric)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVFA0006

Message Unable to do configure fabric because the fabric node arg1 , node type arg2 does not match with fabric design node arg3 design node type arg4 .

Arguments arg1 = fabric node arg2 = node type arg3 = fabric design arg4 = design node type

Detailed Description The fabric cannot be configured because the fabric node and fabric design node identified in the message does not match.

Recommended Response Action

Enter a valid fabric node, node type and retry the operation again.

Category Configuration (NVFA = Fabric)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVFA0007

Message Unable to configure fabric because the design node arg1 does not exist in fabric design.

Arguments arg1 = design node

Detailed Description The fabric cannot be configured because the design node does not exist in the fabric design identified in the message.

Recommended Response Action Enter a valid design node and retry the operation again.
Category Configuration (NVFA = Fabric)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVFA0008

Message Unable to configure fabric because the fabric design node count arg1 does not match with fabric node count arg2 .
Arguments arg1 = fabric nodes count arg2 = fabric node count
Detailed Description The fabric cannot be configured because the fabric node count and fabric design node count identified in the message does not match.
Recommended Response Action Enter valid nodes matching the fabric design and retry the operation again.
Category Configuration (NVFA = Fabric)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVFA0009

Message Updating fabric design map on an existing fabric is not supported.
Detailed Description Once fabric is created, the design map cannot be changed.
Recommended Response Action No response action is required.
Category Configuration (NVFA = Fabric)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVFA0010

Message Updating the fabric design of an existing fabric is not supported.
Detailed Description Once fabric is created, fabric design cannot be updated.

Recommended Response Action No response action is required.

Category Configuration (NVFA = Fabric)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVFA0011

Message Updating the nodes of an existing fabric is not supported.

Detailed Description Once the fabric is created, the nodes cannot be added/removed.

Recommended Response Action No response action is required.

Category Configuration (NVFA = Fabric)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVFA0012

Message Unable to assign the node arg1 to a fabric because a Lifecycle operation is in progress on the node and the node state is arg2 .

Arguments arg1 = node ID arg2 = current lifecycle state

Detailed Description The node identified in the message cannot be assigned to a fabric because a Lifecycle operation is in progress on the node.

Recommended Response Action Wait for the pending Lifecycle action to complete and retry the operation.

Category Configuration (NVFA = Fabric)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVFA0013

Message Unable to start the Fabric Lifecycle operation because a Lifecycle operation is already in progress on the Fabric.

Detailed Description The Lifecycle operation cannot be started on the Fabric because a Lifecycle operation is already in progress on the Fabric.

Recommended Response Action	Wait for the pending Lifecycle operation to get completed and retry the operation.
Category	Configuration (NVFA = Fabric)
Severity	Critical
Redfish Event Type	
	No alerts are applicable for this message

NVFA0014

Message	Unable to delete the fabric because a fabric upgrade operation is in progress on the selected fabric.
Detailed Description	The fabric cannot be deleted because a fabric upgrade operation is in progress on the selected fabric.
Recommended Response Action	Wait for the pending lifecycle operation on the fabric to be completed and retry the operation.
Category	Configuration (NVFA = Fabric)
Severity	Critical
Redfish Event Type	
	No alerts are applicable for this message

NVFA0015

Message	Unable to apply the Fabric Lifecycle configuration because the lead I/O module arg1 lifecycle activity is in progress.
Arguments	arg1 = lead servicetag
Detailed Description	The Fabric Lifecycle operation cannot be applied because the lead I/O modules lifecycle activity is in progress.
Recommended Response Action	Wait for the Lifecycle activity of the lead I/O module to complete and retry the operation.
Category	Configuration (NVFA = Fabric)
Severity	Critical
Redfish Event Type	
	No alerts are applicable for this message

NVFA0016

Message	Unable to replace the switch because the Service Tag provided for the old or new switch is invalid, the old switch is still online, the new switch is offline, or the new switch is or was part of another fabric.
---------	--

Detailed Description	The switch cannot be replaced because the Service Tag provided for the old or new switch is invalid, the old switch is still online, the new switch is offline, or the new switch is or was part of another fabric.
Recommended Response Action	Make sure of the following and retry the operation: 1)The Service Tag entered for the old and new switch is valid. 2) The old switch has physically been removed. 3) The new switch is online in full-switch mode and at the same version of OS10 as the other switch in the SmartFabric. 4) The new switch was not part of another SmartFabric in the same Multi-Chassis Management group as the old switch.

Network Validation Fabric Health Event Messages

NV FH0001

Message	The current leader node is not preferred and a node arg1 with preferred leader configuration is discovered.
Arguments	arg1 = nodeName
Detailed Description	The current leader is not configured as the preferred leader.
Recommended Response Action	Check cluster members. It is suggested to keep the current node as leader. Else, switch-over to new preferred leader.

Category Configuration (NVFH = Network Validation Fabric Health)
Severity Warning
Redfish Event Type

No alerts are applicable for this message

NV FH0002

Message A node arg1 of more preferred platform type arg2 than the current leader is discovered.

Arguments arg1 = nodeName arg2 = platformType

Detailed Description A node of more preferred platform type is discovered.

Recommended Response Action It is suggested to configure the preferred leader with the preferred platform type.

Category Configuration (NVFH = Network Validation Fabric Health)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

NV FH0003

Message A node of more preferred platform type arg1 than the current leader is discovered and preferred leader is not configured on it.

Arguments arg1 = platform Type

Detailed Description A node of more preferred platform type is discovered but the preferred leader is not configured on it.

Recommended Response Action It is suggested to configure the preferred leader if required.

Category Configuration (NVFH = Network Validation Fabric Health)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

NV FH0017

Message The backup node does not have information about the leader node.

Detailed Description The backup node does not have information about the leader node.

Recommended Response Action To view information about the leader node, run the following command at the CLI: show smartfabric cluster.

Category Configuration (NVFH = Network Validation Fabric Health)
Severity Warning

NVIF0008

Message Unable to configure the Breakout property on the interface arg1 because the resource validation has failed.

Arguments arg1 = Interface Name

Detailed Description The Breakout property on the interface identified on the message cannot be configured because the interface has associated configured resources.

Recommended Response

Action Unconfigure the resources for the interface and retry the operation.

Category Configuration (NVIF = Interface)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVIF0009

Message Unable to configure the Breakout property on the interface arg1 because the VLAN association validation has failed.

Arguments arg1 = Interface Name

Detailed Description	The Breakout property on the interface identified in the message cannot be configured because the interface member has associated vlan configuration.
Recommended Response Action	Unconfigure VLAN resources for the interface and retry the operation.
Category	Configuration (NVIF = Interface)
Severity	Critical
Redfish Event Type	

No alerts are applicable for this message

NVIF0010

Message	Unable to configure the Breakout property on the interface arg1 because the interface is part of the uplink.
Arguments	arg1 = Interface Name
Detailed Description	The Breakout property on the interface identified in the message cannot be configured because the interface member has associated FIP-VLAN configuration.
Recommended Response Action	Unconfigure FIP-VLAN resources for the interface and retry the operation.
Category	Configuration (NVIF = Interface)
Severity	Critical
Redfish Event Type	

No alerts are applicable for this message

NVIF0011

Message	Unable to configure the breakout property on the interface arg1 because the breakout member is part of an uplink.
Arguments	arg1 = Interface Name
Detailed Description	The Breakout property on the interface identified in the message cannot be configured because the member interface is associated with an uplink.
Recommended Response Action	Remove the breakout member from the uplink and retry the operation.
Category	Configuration (NVIF = Interface)
Severity	Critical
Redfish Event Type	

No alerts are applicable for this message

NVIF0012

Message	Unable to configure the breakout property on the interface arg1 because the breakout member is part of another port channel.
Arguments	arg1 = Interface Name
Detailed Description	The Breakout property on the interface identified in the message cannot be configured because the member interface is associated with another port channel.
Recommended Response Action	Remove the breakout member from the port channel member and retry the operation.
Category	Configuration (NVIF = Interface)
Severity	Critical
Redfish Event Type	
	No alerts are applicable for this message

NVIF0013

Message	Unable to configure the Breakout property on the interface arg1 because the MX7116n Fabric Expander Module resource validation has failed.
Arguments	arg1 = Interface Name
Detailed Description	The Breakout property on the interface identified on the message cannot be configured because the interface has associated MX7116n Fabric Expander Module resources.
Recommended Response Action	Remove the cable between the MX7116n Fabric Expander Module and port group and retry the operation.
Category	Configuration (NVIF = Interface)
Severity	Critical
Redfish Event Type	
	No alerts are applicable for this message

NVIF0014

Message	Unable to configure Maximum Transmission Unit(MTU) on interface arg1 because the interface is of fibre channel (FC) type.
Arguments	arg1 = interface Name
Detailed Description	The Maximum Transmission Unit (MTU) cannot be configured on the specified interface because it is of Fibre Channel interface type.
Recommended Response Action	Choose a different interface type and retry the operation.

Node Event Messages

NVNO0001

Message Unable to retrieve the I/O Module because the I/O Module does not exist.
Detailed Description The I/O Module can not be retrieved because the I/O Module does not exist in the inventory.
Recommended Response Action Enter a valid I/O Module value and retry the operation.
Category Configuration (NVNO = Node)
Severity Critical
Redfish Event Type

No alerts are applicable for this message

NVNO0002

Message Unable to start the I/O Module Lifecycle operation because a Lifecycle operation is already in progress on the I/O Module.
Detailed Description The Lifecycle operation cannot be started on the I/O Module because a Lifecycle operation is already in progress on the I/O Module.
Recommended Response Action Wait for the pending Lifecycle operation to completed and retry the operation.
Category Configuration (NVNO = Node)
Severity Critical
Redfish Event Type

No alerts are applicable for this message

NVNO0003

Message Unable to start the lifecycle operation on the I/O Module because the I/O Module is offline.
Detailed Description The lifecycle operation cannot be started on the I/O Module because the I/O Module is offline.

Recommended Response Action Wait for the I/O Module to come back online and retry the operation.
Category Configuration (NVNO = Node)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVNO0004

Message Unable to perform upgrade operation because the I/O Module is part of a SmartFabric.
Detailed Description The upgrade operation on a I/O Module that is part of a SmartFabric is not permitted.
Recommended Response Action Perform fabric upgrade to upgrade the I/O Modules or delete the SmartFabric and retry the operation again.
Category Configuration (NVNO = Node)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVNO0005

Message Unable to apply the configuration because the I/O Module is not in fabric mode.
Detailed Description The configuration cannot be applied because the I/O Module is not in the fabric mode.
Recommended Response Action Make sure that the I/O Module belongs to a fabric mode by creating a fabric between the I/O Modules and retry the operation.
Category Configuration (NVNO = Node)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVNO0006

Message Unable to apply the Node Lifecycle configuration because the lead I/O module arg1 Lifecycle activity is in progress.
Arguments arg1 = lead ServiceTag
Detailed Description The Node Lifecycle configuration cannot be applied because the lead I/O Modules lifecycle activity is in progress.

Recommended Response Action Wait for the Lifecycle activity of lead I/O module to complete and retry the operation.
Category Configuration (NVNO = Node)

REST Event Messages

NVRE0001

Message Unable to process the request because the Base Authentication Token is not present in the request.
Detailed Description The request failed because the Base Authentication token is not present in the request header.
Recommended Response Action Enter a Base Authentication Token in the request header and retry the operation.
Category Configuration (NVRE = REST)
Severity Critical
Redfish Event Type

No alerts are applicable for this message

NVRE0002

Message Unable to process the request because the Authorization Token is not of Basic type.
Detailed Description The request can not be processed because the Authorization Token entered is not of Basic type.
Recommended Response Action Change the Authorization token type to Basic Authentication and retry the operation.
Category Configuration (NVRE = REST)
Severity Critical
Redfish Event Type

No alerts are applicable for this message

NVRE0003

Message Unable to process the request because the authorization failed.
Detailed Description The request can not be processed because the username and password provided in the authorization token is not valid.

Recommended Response Action Provide a valid user name and password and retry the operation again.
Category Configuration (NVRE = REST)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVRE0004

Message Unable to process the request because the provided URL is not valid.
Detailed Description The request can not be processed because the given URL is not valid.
Recommended Response Action Enter a valid URL and retry the operation again.
Category Configuration (NVRE = REST)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVRE0005

Message Unable to process the request because the provided image stream is not valid.
Detailed Description The request can not be processed because the given image stream is not a valid firmware image.
Recommended Response Action Provide a valid image stream and retry the operation.
Category Configuration (NVRE = REST)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVRE0006

Message Unable to process the request because the input JSON payload is invalid. Error information: arg1 .
Arguments arg1 = details
Detailed Description The request failed because the payload provided is not of valid JSON format.

Recommended Response Action Enter a valid JSON payload and retry the operation again.
Category Configuration (NVRE = REST)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVRE0007

Message Unable to process the request because the VLAN ID entered is not an integer.
Detailed Description The request can not be processed because the entered VLAN ID is not an integer.
Recommended Response Action Enter a valid integer for VLAN ID in the payload and retry the operation again.
Category Configuration (NVRE = REST)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVRE0008

Message Unable to process the request because the URL is not valid.
Detailed Description The request can not be processed because the entered odata URL does not have correct parenthesis.
Recommended Response Action Enter a valid odata URL, check the correctness of parenthesis and retry the operation again.
Category Configuration (NVRE = REST)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVRE0009

Message Unable to process the request because the URL is not valid.
Detailed Description The request can not be processed because the URL is not valid and the ID provided in the URL is not correct.
Recommended Response Action Enter a valid URL, check for correctness of odata ID and retry the operation.

Category Configuration (NVRE = REST)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVRE0016

Message Unable to process the request because the discovered server does not exist.

Detailed Description The request can not be processed because the given discovered server ID is not present.

Recommended Response

Action Enter a valid discovered server ID and retry the operation.

Category Configuration (NVRE = REST)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVRE0017

Message Unable to process the request because the discovered server interface does not exist.

Detailed Description The request can not be processed because the given discovered server interface ID is not present.

Recommended Response

Action Enter a valid discovered server interface ID and retry the operation.

Category Configuration (NVRE = REST)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVRE0018

Message Unable to process the request because the server interface bond does not exist.

Detailed Description The request can not be processed because the given server interface bond id is not present.

Recommended Response

Action Enter a valid server interface bond id and retry the operation.

Category Configuration (NVRE = REST)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVRE0019

Message Unable to process the request because the VLAN does not exist.

Detailed Description The request can not be processed because the given VLAN ID is not present.

Recommended Response

Action Enter a valid VLAN ID and retry the operation.

Category Configuration (NVRE = REST)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVRE0020

Message Unable to save the image file because necessary disk space is unavailable.

Detailed Description The image file cannot be processed because necessary disk space is unavailable.

Recommended Response

Action Delete the current image file from /var/os10-image location and retry the operation.

Category Configuration (NVRE = REST)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVRE0021

Message Unable to process the request because the user arg1 does not have the privilege to change the password.

Arguments arg1 = user name

Detailed Description The password cannot be changed because the user identified in the message does not have the privilege to change the password.

Recommended Response

Action Enter a valid REST user name which has the privilege to change the password and retry the operation.

---------	--

Detailed Description The Support bundle collection is in progress.

Recommended Response Action Wait for current operation to complete and then retry the operation.

Category Configuration (NVRE = REST)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVRE3001

Message Unable to retrieve the IP prefix-list rule data because the IP prefix-list name and sequence number does not exist.

Detailed Description The prefix-list rule data because the IP prefix-list name and sequence number does not exist.

Recommended Response Action Enter a valid IP Access Control List (ACL) prefix-list rule with name and sequence number, and then retry the operation.

Category Configuration (NVRE = REST)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVRE3002

Message Unable to retrieve the IP prefix-list data because the IP prefix-list name does not exist.

Detailed Description The prefix-list rule data cannot be retrieved because the IP prefix-list name and sequence number does not exist.

Recommended Response Action Enter a valid IP Access Control List (ACL) rule with ACL name and sequence number, and then retry the operation.

Category Configuration (NVRE = REST)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVRE3003

Message Unable to create the IP prefix-list rule because there is already an IP prefix-list rule and sequence number with the same name.

Detailed Description The IP prefix-list rule cannot be created because there is already an IP prefix-list rule and sequence number with the same name.

Recommended Response Action Create an IP prefix-list rule by using a unique prefix-list name and sequence number, and then retry the operation.

Category Configuration (NVRE = REST)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVRE3004

Message Unable to create the IP prefix-list because there is already an IP prefix-list with the same name.

Detailed Description The IP prefix-list cannot be created because there is already an IP prefix-list with the same name.

Recommended Response Action Create an IP prefix-list rule by using a unique prefix-list name, and then retry the operation.

Category Configuration (NVRE = REST)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVRE4001

Message Unable to retrieve or update the route-map because the route-map does not exist.

Detailed Description The route-map information cannot be retrieved or updated because the route-map does not exist.

Recommended Response Action Enter a valid route-map name and retry the operation.

Category Configuration (NVRE = REST)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVRE4002

Message Unable to retrieve or update the route-map rule because the route-map rule does not exist.

Detailed Description The route-map rule ID information cannot be retrieved or updated because the route-map rule does not exist.

Recommended Response Action Enter a valid route-map rule ID and retry the operation.
Category Configuration (NVRE = REST)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVRE4003

Message Unable to create a route-map by using the name entered because the route-map already exists.
Detailed Description Unable to create a route-map by using the name entered because the route-map already exists.
Recommended Response Action Enter a new route-map name and retry the operation.
Category Configuration (NVRE = REST)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVRE4004

Message Unable to create a route-map rule by using the ID entered because the route-map rule already exists.
Detailed Description The route-map rule cannot be created because the route-map rule already exists.
Recommended Response Action Enter a new route-map rule ID and retry the operation.
Category Configuration (NVRE = REST)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVRE5001

Message Unable to retrieve the SFS Global data because the SFS Global data does not exist.
Detailed Description The SFS Global data cannot be retrieved because the SFS Global data does not exist.

Recommended Response Action Enter a valid SFS Global data, and then retry the operation.
Category Configuration (NVRE = REST)
Severity Warning
Redfish Event Type
No alerts are applicable for this message

NVRE5002

Message Unable to create or update the SFS Global data because the entered SFS Global data is invalid.
Detailed Description The SFS Global data cannot be created because the entered SFS Global data is invalid.
Recommended Response Action Enter a valid SFS Global data, and then retry the operation.
Category Configuration (NVRE = REST)
Severity Warning
Redfish Event Type
No alerts are applicable for this message

NVRE5003

Message Unable to create or update the Layer 3 Fabric configuration because the length of prefix characters entered is invalid.
Detailed Description The Layer 3 Fabric configuration cannot be created or updated because the length of prefix characters entered is invalid.
Recommended Response Action Enter prefix whose length does not exceed 31 characters, and retry the operation.
Category Configuration (NVRE = REST)
Severity Warning
Redfish Event Type
No alerts are applicable for this message

NVRE5004

Message Unable to create or update the Layer 3 Fabric configuration because an invalid Autonomous System Number (ASN) value is entered.
Detailed Description The Layer 3 Fabric configuration cannot be created or updated because an invalid Autonomous System Number (ASN) value is entered.

Recommended Response Action Enter a valid ASN value from 64,512 to 65,535, and then retry operation.

Category Configuration (NVRE = REST)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

NVRE5005

Message Unable to create or update the Layer 3 Fabric personality configuration because the control or management VLAN value entered is invalid.

Detailed Description The Layer 3 Fabric personality configuration cannot be created or updated because the control or management VLAN value entered is invalid.

Recommended Response Action Enter a valid control or management VLAN value and retry the operation. Range between 4000 and 4094 are reserved except 4091 for control or management vlan.

Category Configuration (NVRE = REST)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

NVRE6001

Message Unable to retrieve the SNMP server host data because the SNMP server does not exist.

Detailed Description The SNMP server host data cannot be retrieved because the SNMP server does not exist.

Recommended Response Action Enter a valid SNMP server host data, and then retry the operation.

Category Configuration (NVRE = REST)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

NVRE6002

Message Unable to create or update the SNMP server host data because invalid SNMP server data is entered.

Detailed Description The SNMP server host data cannot be created or updated retrieved because invalid SNMP server data is entered.

Recommended Response Action Enter a valid SNMP server host data, and then retry the operation.
Category Configuration (NVRE = REST)
Severity Warning
Redfish Event Type
No alerts are applicable for this message

NVRE6003

Message Unable to create the SNMP server host because an SNMP server host already exists with the similar IP address.
Detailed Description The SNMP server host data cannot be created because an SNMP server host already exists with the similar IP address.
Recommended Response Action Create a SNMP server host by using a unique host IP address, and then retry the operation.
Category Configuration (NVRE = REST)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVRE6004

Message Unable to create the SNMP server host because an SNMP server data does not exist.
Detailed Description The SNMP server host data cannot be created because an SNMP server data does not exist.
Recommended Response Action Enter a valid SNMP server data and retry the operation.
Category Configuration (NVRE = REST)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVRE6005

Message Unable to create or update the SNMP server data because invalid data is entered.
Detailed Description The SNMP server data cannot be created or updated because invalid data is entered.

Recommended Response Action Enter a valid SNMP server data and retry the operation.
Category Configuration (NVRE = REST)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVRE6006

Message Unable to create the SNMP server data because there is an SNMP server data already exists with the same host IP address.
Detailed Description The SNMP server data cannot be created because there is an SNMP server data already exists with the same host IP address.
Recommended Response Action Enter a valid SNMP server data with a unique host IP address, and then retry the operation.
Category Configuration (NVRE = REST)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVRE7001

Message Unable to create or update the fabric nodes by using the preferred leader setting because the personality is not in L3 Fabric mode.
Detailed Description The fabric nodes cannot be created or updated by using the preferred leadersetting because the personality is not in L3 Fabric mode.
Recommended Response Action Update the fabric node to L3 Fabric and retry the operation.
Category Configuration (NVRE = REST)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVRE7002

Message Unable to create or update the fabric nodes by using the preferred leader setting because the node is not a leaf node.
Detailed Description The fabric nodes cannot be created or updated by using the preferred leadersetting because the node is not a leaf node.

Recommended Response Action Assign the node the role of a leaf node, and then retry the operation.
Category Configuration (NVRE = REST)
Severity Warning
Redfish Event Type
No alerts are applicable for this message

NVRE8001

Message Unable to complete RestConf operation because the Service Tag of the node is unavailable.
Detailed Description The RestConf operation can not be performed because the Service Tag of the node entered is unavailable.
Recommended Response Action Enter a valid and existing Service Tag of the node, and retry the operation.
Category Configuration (NVRE = REST)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVRE8002

Message Unable to perform the RestConf operation because the RestConf URL entered is invalid.
Detailed Description The RestConf operation cannot be performed because the RestConf URL is invalid.
Recommended Response Action Enter a valid RestConf URL. and then retry the operation.
Category Configuration (NVRE = REST)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVRE9003

Message Information about the restore cannot be retrieved because the restore ID entered is unavailable.
Detailed Description Information about the restore cannot be retrieved because the restore ID entered is unavailable.

Recommended Response Action Enter a valid and existing restore ID, and retry the operation.
Category Configuration (NVRE = REST)
Severity Critical
Redfish Event Type

No alerts are applicable for this message

Server Interface Event Messages

NVSE0001

Message Unable to process the request because the Server ID is not entered in the input.
Detailed Description The request cannot be processed because the Server ID is not entered in the input.
Recommended Response Action Enter a valid Server ID and retry the operation.
Category Configuration (NVSE = Server Interface)
Severity Critical
Redfish Event Type

No alerts are applicable for this message

NVSE0002

Message Unable to process the request because the ServerInterfaceID is missing in the input.
Detailed Description The request cannot be processed because the ServerInterfaceID is missing in the input.
Recommended Response Action Enter a valid ServerInterfaceID and retry the operation.
Category Configuration (NVSE = Server Interface)
Severity Critical
Redfish Event Type

No alerts are applicable for this message

NVSE0003

Message Unable to create a server profile because the server profile already exists.
Detailed Description The server profile cannot be created because the server profile already exists.

Recommended Response Action Enter a new server profile name and retry the operation.
Category Configuration (NVSE = Server Interface)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVSE0004

Message Unable to create a server interface profile because the server interface profile already exists.
Detailed Description The server interface profile cannot be created because the server interface profile already exists.
Recommended Response Action Enter a new server interface profile name and retry the operation.
Category Configuration (NVSE = Server Interface)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVSE0005

Message Unable to create or retrieve server profile because the server profile does not exist.
Detailed Description The server profile cannot be created or retrieved because the server profile does not exist.
Recommended Response Action Enter a valid server profile name and retry the operation.
Category Configuration (NVSE = Server Interface)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVSE0006

Message Unable to configure or retrieve server interface profile because it does not exist.
Detailed Description The server interface profile cannot be retrieved or configured because it does not exist.

Recommended Response Action Enter a valid server interface profile name and retry the operation.
Category Configuration (NVSE = Server Interface)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVSE0007

Message Unable to configure server interface profile because the FCoE bandwidth partition is not matching with the other server interface profiles on this server profile.
Detailed Description The server interface profile cannot be created because the FCoE bandwidth partition is not matching with the other server interface profiles on this server profile.
Recommended Response Action Enter a valid FCoE bandwidth partition and retry the operation again.
Category Configuration (NVSE = Server Interface)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVSE0008

Message Unable to configure server interface profile because the native VLAN value configured on the server interface profile is invalid.
Detailed Description The server interface profile cannot be created because the native VLAN value configured on the server interface profile is invalid.
Recommended Response Action Enter a valid native VLAN and retry the operation again.
Category Configuration (NVSE = Server Interface)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

NVSE0009

Message Unable to configure the Server Interface Profile because the Percentage Bandwidth value entered for configuring the Server Interface Profile is invalid.

Detailed Description The Server Interface Profile cannot be configured because the Percentage Bandwidth value entered for configuring the Server Interface Profile is invalid.

Recommended Response Action Enter a valid Percentage Bandwidth value and retry the operation.

Category Configuration (NVSE = Server Interface)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVSE0010

Message Unable to create or update the Server Interface Profile because a Storage FCoE type of Network and a Native VLAN is configured on this Server Interface Profile.

Detailed Description The Server Interface Profile cannot be created or updated because a Storage FCoE type of Network and Native VLAN are both configured on this Server Interface Profile.

Recommended Response Action Remove the Native VLAN configuration from the Server Interface Profile and retry the operation.

Category Configuration (NVSE = Server Interface)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVSE0011

Message Unable to create or update the server interface profile because of a mismatched network type configured on the server interface.

Detailed Description The server interface profile cannot be created or updated because of a mismatched network type configured on the server interface.

Recommended Response Action Remove the conflicting network configuration on the server interface, and retry the operation.

Category Configuration (NVSE = Server Interface)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

NVSE0012

Message	Unable to create or update the server interface profile because there is a Layer3 Routed network configured (as tagged network) on the server interface.
Detailed Description	The server interface profile cannot be created because there is a Layer3 Routed network configured (as tagged network) on the server interface.
Recommended Response Action	Remove the Layer3 Routed network from the tagged network list on the server interface and retry the operation.
Category	Configuration (NVSE = Server Interface)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

NVSE0013

Message	Unable to create or update the server interface profile because there are duplicate networks configured.
Detailed Description	The server interface profile cannot be created or updated because there are duplicate network configured.
Recommended Response Action	Remove the duplicate network configuration from the server interface and retry the operation.
Category	Configuration (NVSE = Server Interface)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

NVSE0014

Message	Unable to update the server interface profile because the network change from tagged network to untagged network or vice-versa is not allowed on the server interface.
Detailed Description	The server interface profile cannot be created or updated because the network change from tagged network to untagged network or vice-verser is not allowed on the server interface.
Recommended Response Action	Delete the network configuration, and reconfigure the networks on the server interface to change from tagged to untagged, or from untagged to tagged.
Category	Configuration (NVSE = Server Interface)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

NVSE0015

Message	Unable to create or update the server interface profile because the static onboard interface is already used by another server interface profile.
Detailed Description	The server interface profile cannot be created or updated because the static onboard interface is already used by another server interface profile.
Recommended Response Action	Modify the server interface profile by using a static onboard interface which is not in use and then retry the operation.
Category	Configuration (NVSE = Server Interface)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

NVSE0025

Message	Unable to create or update the server interface profile because either the untagged VLAN field is empty or the native VLAN (VLAN 1) is entered along with one of the FCoE-enabled networks in tagged Network.
Detailed Description	The server interface profile cannot be completed because either the untagged VLAN field is empty or the native VLAN (VLAN 1) is entered along with one of the FCoE-enabled networks in tagged Network. Do any one of the following and retry the operation: 1) Update the server interface profile by entering an untagged VLAN ID in the server port which is same as the FCoE uplink ports or 2) Remove the native VLAN (VLAN 1) from the tagged network and update the untagged VLAN as the native VLAN (VLAN 1).
Recommended Response Action	
Category	Configuration (NVSE = Server Interface)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

NVSE0026

Message	Unable to either create or update the server template because the server type already exists.
Detailed Description	The server template cannot be either created or updated because because the server type already exists.
Recommended Response Action	Enter a unique server type and retry the operation.
Category	Configuration (NVSE = Server Interface)
Severity	Warning

Redfish Event
Type

No alerts are applicable for this message

NVSE0027

Message Unable to associate the network ID because the L3 routed network is associated with one of the Uplinks.

Detailed Description The network ID cannot be associated to the Uplink profile because the L3 routed network is associated with one of the Uplinks.

Recommended Response Action Delete the Uplink profile that is already associated with this L3 routed network and retry the operation.

Category Configuration (NVSE = Server Interface)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

NVSE0028

Message Unable to associate the network ID because the L3 routed network is associated with one of the server profiles.

Detailed Description The network ID cannot be associated because the L3 routed network is associated with one of the server profiles.

Recommended Response Action Delete the server profile that is already associated with this L3 routed network and retry the operation.

Category Configuration (NVSE = Server Interface)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

NVSE0029

Message Unable to retrieve server template because it is not available in the template database.

Detailed Description The server template cannot be retrieved because it is not available in the template database.

Recommended Response Action Enter a valid server template name and retry the operation.

Category Configuration (NVSE = Server Interface)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

NVSE0030

Message	Unable to configure or update the server interface template because the server interface can accept only one FCoE VLAN network in a template.
Detailed Description	The server interface template cannot be configured or updated because the tagged networks must not have more than one FCoE VLAN network.
Recommended Response Action	Make sure that the server interface template has only one FCoE VLAN network and retry the operation.
Category	Configuration (NVSE = Server Interface)
Severity	Warning
Redfish Event Type	

No alerts are applicable for this message

NVSE0031

Message	Unable to assign the selected server type because editing of this server type is not supported.
Detailed Description	The selected server type cannot be assigned because editing of this server type is not supported.
Recommended Response Action	Delete the current server template and create a new template by using the required server type.
Category	Configuration (NVSE = Server Interface)
Severity	Warning
Redfish Event Type	

No alerts are applicable for this message

NVSE0032

Message	Unable to create the server template because the server template name already exists.
Detailed Description	The server template cannot be created because the server template name already exists.
Recommended Response Action	Enter a unique server template name and retry the operation.
Category	Configuration (NVSE = Server Interface)
Severity	Warning
Redfish Event Type	

No alerts are applicable for this message

Subscription Event Messages

NVSU0001

Message	Unable to retrieve the subscription, because the subscription does not exist.
Detailed Description	The subscription cannot be retrieved because the subscription identified in the message is not present.
Recommended Response	
Action	Enter a valid subscription and retry the operation.
Category	Configuration (NVSU = Subscription)
Severity	Critical
Redfish Event Type	

No alerts are applicable for this message

NVSU0002

Message	Unable to configure the subscription because the subscription arg1 is not entered.
Arguments	arg1 = Attribute Id
Detailed Description	The subscription cannot be configured because the subscription attribute is not entered.
Recommended Response	
Action	Enter a valid subscription attribute and retry the operation.
Category	Configuration (NVSU = Subscription)
Severity	Critical
Redfish Event Type	

No alerts are applicable for this message

NVSU0003

Message	Unable to configure the subscription because the subscription arg1 is invalid.
Arguments	arg1 = Attribute Id
Detailed Description	The subscription cannot be configured because the subscription attribute is invalid.
Recommended Response	
Action	Enter a valid subscription Attribute and retry the operation.
Category	Configuration (NVSU = Subscription)
Severity	Critical

Redfish Event

Topology Graph Event Messages

NVTG0001

Message	Unable to retrieve the topology graph because the topology graph does not exist.
Detailed Description	The topology graph can not be retrieved because the topology graph does not exist.
Recommended Response	
Action	Enter a valid topology graph value and retry the operation.
Category	Configuration (NVTG = Topology Graph)
Severity	Critical
Redfish Event Type	

No alerts are applicable for this message

NVTG0002

Message	Unable to retrieve the topology graph link because the topology graph link does not exist.
Detailed Description	The topology graph link can not be retrieved because the topology graph link does not exist.
Recommended Response	
Action	Enter a valid topology graph link value and retry the operation.
Category	Configuration (NVTG = Topology Graph)
Severity	Critical
Redfish Event Type	

No alerts are applicable for this message

Topology Event Messages

NVTP0001

Message	Unable to validate the topology because a different type of IOM is found in the slot pair.
Detailed Description	The topology validation failed because of a different type of IOM found in the slot pair in the chassis.
Recommended Response	
Action	Make sure that the IOMs of the same type occupy the same slot pair in a chassis.
Category	Configuration (NVTP = Topology)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVTP0002

Message Unable to validate the MX7116n Fabric Expander Module because the slot number of the MX7116n Fabric Expander Module and the slot number of the Network IOM are different.

Detailed Description The MX7116n Fabric Expander Module validation failed because the MX7116n Fabric Expander Module slot number and the Network IOM slot number are different.

Recommended Response Action Make sure that the slot number of the MX7116n Fabric Expander Module and the slot number of the Network IOM are the same like (A or B)[1]---(A or B)[1] and (A or B)[2]---(A or B)[2]. Mezz cards can be different either A or B but slot number should be same.

Category Configuration (NVTP = Topology)

Severity Critical

Redfish Event Type

Uplink Event Messages

NVUP0001

Message Unable to configure the uplink because the configuredinterface arg1 does not exist.

Arguments arg1 = interface name

Detailed Description The uplink cannot be configured because the ConfiguredInterface identified in the message is not present.

Recommended Response Action Enter a valid configuredinterface and retry the operation.

Category Configuration (NVUP = Uplink)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVUP0002

Message Unable to configure the ConfiguredInterface arg1 as an uplink because it is already being used.

Arguments arg1 = interface name

Detailed Description The configuredinterface mentioned in the message cannot be configured as uplink because it is already being used.

Recommended Response Action Enter another configuredinterface and retry the operation.

Category Configuration (NVUP = Uplink)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVUP0003

Message Unable to configure the ConfiguredInterface arg1 as an uplink because it is not of Type Physical.

Arguments arg1 = interface-name

Detailed Description The configuredinterface mentioned in the message, cannot be configured as an uplink because it is not of Type Physical.

Recommended Response Action Enter a configuredinterface of Type Physical and retry the operation.

Category Configuration (NVUP = Uplink)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVUP0004

Message Unable to modify the configured interfaces for FC/FCoE/FCGateway uplink as they cannot be modified.

Detailed Description The configured interfaces for FC/FCoE/FCGateway uplink cannot be modified or deleted.

Recommended Response Action To modify the configured interfaces of uplink, please delete the uplink and create the uplink with desired interfaces.

Category Configuration (NVUP = Uplink)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVUP0005

Message Unable to configure or update the Uplink because the Uplink configured with MediaType as Fiber Channel (FC) or Fiber Channel over Ethernet (FCoE) must have only one VLAN for the configured interfaces.

Detailed Description	The uplink cannot be configured or updated because the Uplink configured with MediaType as Fiber Channel (FC) or Fiber Channel over Ethernet (FCoE) must have only one VLAN for the configured interfaces.
Recommended Response Action	Make sure that the Uplink has only one VLAN for the configured interfaces.
Category	Configuration (NVUP = Uplink)
Severity	Critical
Redfish Event Type	
	No alerts are applicable for this message

NVUP0006

Message	Unable to configure uplink because multiple Fiber Channel or storage uplinks are not supported.
Detailed Description	Uplink cannot be configured because only one Uplink of MediaType FiberChannel(FC) or FiberChannelOverEthernet(FCOE) and one uplink of MediaType iSCSI(storage uplink) is supported for the given Fabric.
Recommended Response Action	No response action is required.
Category	Configuration (NVUP = Uplink)
Severity	Critical
Redfish Event Type	
	No alerts are applicable for this message

NVUP0007

Message	Unable to configure the uplink because the uplink does not exist.
Detailed Description	The uplink cannot be retrieved because the uplink identified in the message does not exist.
Recommended Response Action	Enter a valid uplink and retry the operation.
Category	Configuration (NVUP = Uplink)
Severity	Critical
Redfish Event Type	
	No alerts are applicable for this message

NVUP0008

Message	Unable to configure or update the uplink because the media type entered is not supported.
---------	---

Detailed Description The uplink cannot be configured because the media type entered is not supported.

Recommended Response Action Enter an uplink with the supported media type and retry the operation.

Category Configuration (NVUP = Uplink)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVUP0009

Message Unable to configure the uplink because the FCoE Initiation Protocol(FIP) network is already used in this fabric.

Detailed Description The Uplink cannot be configured because the FCoE Initiation Protocol (FIP) network is already used in this fabric. Two FC uplinks on the same fabric cannot have the same network.

Recommended Response Action Enter an uplink with a different FIP network and retry the operation.

Category Configuration (NVUP = Uplink)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVUP0010

Message Unable to configure the Uplink because a Layer3-routed network is configured (as a tagged network) on the uplink.

Detailed Description The Uplink cannot be configured because a Layer3-routed network is configured (as a tagged network) on the uplink.

Recommended Response Action Remove the Layer3-routed network from the tagged network list on the uplink, and then retry the operation.

Category Configuration (NVUP = Uplink)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

NVUP0011

Message Unable to update the Uplink because the Link Aggregation Group (LAG) type of the Uplink cannot be modified.

Detailed Description	The Uplink cannot be updated because the Link Aggregation Group (LAG) type of the Uplink cannot be modified.
Recommended Response Action	To modify the Link Aggregation Group (LAG) type, delete the Uplink, and then create a new Uplink by using the desired LAG type.
Category	Configuration (NVUP = Uplink)
Severity	Critical
Redfish Event Type	
	No alerts are applicable for this message

NVUP0012

Message	Unable to configure the Uplink because the Uplink ID arg1 already exists.
Arguments	arg1 = uplink ID
Detailed Description	The Uplink cannot be configured because the Uplink ID identified in the message already exists.
Recommended Response Action	Enter a new Uplink ID and retry the operation.
Category	Configuration (NVUP = Uplink)
Severity	Critical
Redfish Event Type	
	No alerts are applicable for this message

NVUP0013

Message	Unable to create or update the Uplink because the network arg1 is configured as of both tagged and untagged types.
Arguments	arg1 = network ID
Detailed Description	The Uplink cannot be created or updated because the network identified in the message is configured as of both tagged and untagged types.
Recommended Response Action	Configure the network as either tagged or untagged, and then retry the operation.
Category	Configuration (NVUP = Uplink)
Severity	Critical
Redfish Event Type	
	No alerts are applicable for this message

NVUP0014

Message	Unable to configure the uplink because the selected untagged VLAN ID arg1 is already in use on uplink arg2 in the SmartFabric.
Arguments	arg1 = Vlan ID arg2 = uplink name
Detailed Description	The uplink cannot be configured because the selected untagged VLAN ID is already in use on an existing uplink in the SmartFabric.
Recommended Response Action	Configure the uplink with an untagged VLAN ID which is not already in use on other uplinks in the SmartFabric and retry the operation.
Category	Configuration (NVUP = Uplink)
Severity	Critical
Redfish Event Type	
	No alerts are applicable for this message

NVUP0015

Message	Unable to configure the uplink because the selected tagged network arg1 is already in use on uplink arg2 in the SmartFabric.
Arguments	arg1 = network name arg2 = uplink name
Detailed Description	The uplink cannot be configured because the selected tagged network is already in use on an existing uplink in the SmartFabric.
Recommended Response Action	Configure the uplink with a tagged network which is not already in use on other uplinks in the SmartFabric and retry the operation.
Category	Configuration (NVUP = Uplink)
Severity	Critical
Redfish Event Type	
	No alerts are applicable for this message

NVUP0016

Message	Unable to create Ethernet-No Spanning Tree uplink arg1 because Ethernet-No Spanning Tree and legacy Ethernet Uplinks cannot co-exist in the same SmartFabric.
Arguments	arg1 = Uplink name
Detailed Description	The Uplink cannot be created because Ethernet-No Spanning Tree and legacy Ethernet Uplinks cannot co-exist in same SmartFabric.
Recommended Response Action	To create a Ethernet-No Spanning Tree Uplink, delete the existing legacy Ethernet Uplinks and retry the operation. For more information, see the PowerEdge MX SmartFabric Configuration and Troubleshooting Guide.
Category	Configuration (NVUP = Uplink)
Severity	Critical
Redfish Event Type	

No alerts are applicable for this message

NVUP0017

Message	Unable to create Ethernet Uplink arg1 because Ethernet and Ethernet-No Spanning Tree Uplinks cannot co-exist in the same SmartFabric.
Arguments	arg1 = Uplink name
Detailed Description	The Uplink cannot be created because Ethernet-No Spanning Tree and legacy Ethernet Uplinks cannot co-exist in same SmartFabric.
Recommended Response Action	To create a Ethernet uplink, delete the existing Ethernet- No Spanning Tree Uplinks and retry the operation. For more information, see the PowerEdge MX SmartFabric Configuration and Troubleshooting Guide.

NVUP0018

Message	Unable to create the Ethernet-No Spanning Tree uplink arg1 because the switches in SmartFabric arg2 are running Rapid per VLAN Spanning Tree (Rapid PVST).
Arguments	arg1 = uplink name arg2 = fabric name
Detailed Description	The Ethernet-No Spanning Tree Uplink identified in the message cannot be created because the switches in the SmartFabric are running Rapid per VLAN Spanning Tree (Rapid PVST).
Recommended Response Action	Configure Rapid Spanning Tree Protocol (RSTP) as the mode of STP for SmartFabric switches, and then retry the operation. Run the following command at the Command Line Interface (CLI): "spanning-tree mode rstp". For more information, see the PowerEdge MX SmartFabric Configuration and Troubleshooting Guide.

NVUP0019

Message	Unable to create the Ethernet-No Spanning Tree Uplink because FCoE Uplinks in SmartFabric arg1 have the same untagged VLAN arg2 .
Arguments	arg1 = fabric name arg2 = VLAN ID
Detailed Description	The Ethernet-No Spanning Tree Uplink cannot be created because the FCoE Uplinks in the SmartFabric must have different untagged VLAN. For more information, see the PowerEdge MX SmartFabric Configuration and Troubleshooting Guide.

Recommended Response Action	Configure a different untagged VLAN for each FCoE Uplink, and then retry the operation.
Category	Configuration (NVUP = Uplink)
Severity	Critical
Redfish Event Type	
	No alerts are applicable for this message

NVUP0020

Message	Unable to create or configure the Uplink because FCoE network arg1 , is selected as the tagged network.
Arguments	arg1 = network name
Detailed Description	The Uplink cannot be created or configured because the FCoE network identified in the message is selected as the tagged network.
Recommended Response Action	To create or update an Ethernet or Ethernet-No Spanning Tree Uplink, select only non-FCoE networks as the tagged networks, and then retry the operation.
Category	Configuration (NVUP = Uplink)
Severity	Critical
Redfish Event Type	
	No alerts are applicable for this message

NVUP0021

Message	Unable to create or configure the FCoE Uplink because more than one port are selected.
Detailed Description	The FCoE Uplink cannot be created as more than one port are selected.
Recommended Response Action	To create or update an FCoE Uplink , select only one port.
Category	Configuration (NVUP = Uplink)
Severity	Critical
Redfish Event Type

OSD80

Message Unable to boot to ISO image because of Secure Boot policy.

Detailed
Description

Unable to boot to ISO image because of Secure Boot policy.

If the Secure Boot feature is not desired, disable it in System Setup > System BIOS > Security Settings page. Otherwise, do the following: 1) review the Secure Boot Policy Summary in F2 System Setup > System BIOS > Security Settings page. The boot option must be authorized by a public key or hash value in the Authorized Signature Database. 2) If the boot option is not authorized but it can be trusted, enter System Setup > System BIOS > Security Settings page, set Secure Boot Policy to Custom, and add a entry for the boot option in the Authorized Signature Database (System Setup > System BIOS > Security Settings > Custom Policy Settings > Authorized Signature Database > Import Database Entry).

Message	Dedicated Hot Spare arg1 no longer useful for all arrays.
Arguments	arg1 = PD Name
Detailed Description	The controller is not able to communicate with a disk that is assigned as a dedicated hot spare. The disk may have been removed. There may also be a bad or loose cable.
Recommended Response Action	Verify that the disk is healthy and that it has not been removed. Check the cables. See the Cables Attached Correctly section for more information on checking the cables. If necessary, replace the disk and reassign the dedicated hot spare.

PDR106

Message The physical disk drive arg1 is unassigned as a dedicated hot-spare.

Arguments arg1 = physical disk drive name

Detailed Description A physical disk identified in the hot-spare that was assigned as a hot spare has been un-assigned and is no longer functioning as a hot spare. The physical disk was unassigned by a user or automatically by the storage management software. When one of the disks in a virtual disk fails, data is rebuilt onto the hot spare, The hot spare becomes a member of the virtual disk and is no longer assigned as a hot spare. In this situation, assigning a new hot spare to maintain data protection is recommended.

Recommended Response Action No response action is required. Assigning a new dedicated hot spare to the virtual disk is recommended.

Message

Predictive failure reported for arg1

Arguments

arg1 = PCIe solid state device name

Detailed Description

The PCIe Solid-State Drive is predicted to fail. Many physical disks contain Self Monitoring Analysis and Reporting Technology (SMART). When enabled, SMART monitors the disk health based on indications such as the number of write operations that were performed on the disk.

Recommended Response Action

Back up the data on the device, and contact your service provider for further instructions.

PDR16

Message Predictive failure reported for arg1 . Part Number = arg2
 Arguments arg1 = physical disk arg2 = Part Number

Detailed Description The physical disk Self Monitoring Analysis and Reporting Technology (SMART) system has indicated a predictive failure condition as a result of one or more attributes exceeding reliability thresholds. This may be an indication of imminent disk failure. Even though the disk may not have failed yet, it is strongly recommended that the disk be replaced as soon as possible to avoid data loss or unavailability.

Recommended Response Action Replace the physical disk. For a non-redundant VD, first perform a validated backup, then delete the VD, replace the disk, recreate the VD, and restore from the backup. For a redundant VD, force the disk offline. If a hot spare is configured, rebuild will begin. Otherwise, remove the disk and replace it with a new disk. If a rebuild does not start automatically, assign the new disk as a Global Hot Spare and the rebuild will start. Search "Predictive Failure" on support.dell.com for more information.

PDR18

Message Global hot spare unassigned from arg1 .

Arguments arg1 = PD Name

A physical disk assigned as a hot spare was unassigned and is no longer functioning as a hot spare. The physical disk was unassigned by a user or automatically unassigned by Storage Management. Storage Management unassigns hot spares were used to rebuild data. Once the data is rebuilt onto the hot spare, the hot spare becomes a member of the virtual disk and is no longer assigned as a hot spare. Assign a new hot spare to maintain data protection in this situation.

Detailed Description

Recommended Response Action Although this alert is provided for informational purposes, you may need to assign a new hot spare to the virtual disk. See Protecting Your Virtual Disk with a Hot Spare for more information.

PDR19

Message SMART FPT exceeded for arg1 . Part Number = arg2

Arguments arg1 = PD Name arg2 = Part Number

Detailed Description: A disk on the specified controller has received a SMART alert (predictive failure) indicating that the disk is likely to fail in the near future.

Recommended Response Action: Replace the disk that has received the SMART alert. If the physical disk is a member of a non-redundant virtual disk, then back up the data before replacing the disk. Removing a physical disk that is included in a non-redundant virtual disk causes the virtual disk to fail and may cause data loss.

Message SMART warning temperature for arg1 . Part Number = arg2

Arguments arg1 = PD Name arg2 = Part Number

Detailed Description A disk has reached an unacceptable temperature and received a SMART alert (predictive failure). The disk is likely to fail in the near future.

Do the following:1) Determine why the physical disk reached an unacceptable temperature. For example, a fan failure, incorrect thermostat settings, or the room temperature may be too hot or cold. 2) Verify that the fans in the server or enclosure are working. 3) If the physical disk is in an enclosure, check the thermostat settings and examine whether the enclosure is located near a heat source. Verify the enclosure has enough ventilation and that the room temperature is not too hot. Refer to the enclosure documentation for more diagnostic information. 4) If you cannot identify why the disk has reached an unacceptable temperature, then replace the disk. If the physical disk is a member of a non-redundant virtual disk, then back up the data before replacing the disk. Removing a physical disk that is included in a non-redundant virtual disk causes the virtual disk to fail and may cause data loss.

Message: Dedicated hot spare assigned to arg1 .

Arguments: arg1 = PD Name

Detailed Description: A user assigned a physical disk as a dedicated hot spare to a virtual disk. See Protecting Your Virtual Disk with a Hot Spare for more information. This alert is provided for informational purposes.

Recommended Response Action: No response action is required.

Category: Storage (PDR = Physical Disk)

Severity: Informational

PDR28

Message Dedicated hot spare unassigned from arg1 .

Arguments arg1 = PD Name

Detailed Description
A physical disk that was assigned as a hot spare has been unassigned and is no longer functioning as a hot spare. The physical disk was unassigned by a user or automatically unassigned by Storage Management. Storage Management unassigns hot spares that have been used to rebuild data. Once data is rebuilt onto the hot spare, the hot spare becomes a member of the virtual disk and is no longer assigned as a hot spare. Assign a new hot spare to maintain data protection in this situation.

Recommended Response Action
Although this alert is provided for informational purposes, you may need to assign a new hot spare to the virtual disk. Refer to product documentation and see the section Protecting Your Virtual Disk with a Hot Spare for more information.

PDR3

Message The Physical Drive (PD) arg1 is not correctly functioning. Part number arg2 .

Arguments arg1 = PD Name arg2 = partNumber

Detailed Description The RAID Controller is unable to read-write data to the PD identified in the message because the PD is not functioning. The PD is either failed or removed from the server while communicating with the RAID controller.

Recommended Response Action Do one of the following: 1) If the Physical Drive (PD) was removed at the time of event, this event is expected. Else, replace the PD.2) If it is a non-redundant Virtual Drive (VD), delete the VD, reinsert the PD, recreate the VD, and then restore the data from backup.3) If it is a redundant VD, the data rebuild operation will automatically start if a hot-spare is already configured. If it does not start, assign a PD as a global hot-spare so the rebuild operation is automatically started.

PDR47

Message	A block on arg1 was punctured by the controller.
Arguments	arg1 = physical disk
Detailed Description	The controller encountered an unrecoverable medium error when attempting to read a block on the physical disk and marked that block as invalid. If the controller encountered the unrecoverable medium error on a source physical disk during a rebuild or reconfigure operation, it punctures the corresponding block on the target physical disk. The invalid block clears on a write operation.
Recommended Response Action	Back up the data from the disk. Start disk initialization and wait for it to complete, and then restore the data from a backup copy.

PDR5

Message arg1 is removed.

Arguments arg1 = PD Name

Detailed Description A physical disk has been removed from the disk group. This alert can also be caused by loose or defective cables or by problems with the enclosure.

Do one of the following: 1) If a physical disk was removed from the disk group, either replace the disk or restore the original disk. Identify the disk that was removed by locating the disk that has a red "X" for its status. 2) Perform a rescan after replacing or restoring the disk. 3) If a disk was not removed from the disk group, then check for cable problems. Refer to product documentation for more information on checking the cables. 4) Make sure that the enclosure is powered on. 5) If the problem persists, check the enclosure documentation for further diagnostic information.

Message arg1 is incompatible.

Arguments arg1 = PD Name

Detailed Description A user attempted to replace a disk with another disk that is using an incompatible technology. For example, replaced one side of a mirror with a SAS disk when the other side of the mirror is using SATA technology.

Recommended Response Action Refer to the hardware documentation for information on replacing disks.

PDR60

Message Error occurred on arg1 : arg2 . Part Number = arg3
 Arguments arg1 = physical disk arg2 = error code arg3 = Part Number
 Detailed Description The reason for the error can vary depending on the situation. The firmware error code is indicated in the message.
 Recommended Response Verify the health of attached devices. Review the Lifecycle log for significant events. Replace faulty hardware, if required. Make sure the cables are attached securely. Refer to the storage hardware documentation for more information on checking the cable connections.

PDR61

Message The rebuild of arg1 failed due to errors on the source physical disk.

Arguments arg1 = physical disk

Detailed Description It is not possible to rebuild data that resides on a defective disk. Resolving this issue may require a rebuild of the virtual disk and then a data restore.

Recommended Response Action 1) If possible, generate the SupportAssist and TTY log reports necessary for resolving or troubleshooting this issue. 2) Perform a Verified Data Backup operation if a recent backup is unavailable. 3) If necessary, contact your Dell Tech Support team.

PDR63

Message	A bad disk block on arg1 cannot be reassigned during a write operation.
Arguments	arg1 = physical disk
Detailed Description	The physical disk has failed to complete a write operation due to one or more bad blocks. Attempts to reassign the block have failed. Loss of data and redundancy may have occurred. Replace the physical disk. If VD is online, first perform a backup. For a non-redundant VD, delete the VD, replace the disk, recreate the VD, then restore data from a backup. For a redundant VD, force the disk offline. If a hot spare is configured, rebuild will begin. Otherwise, remove the disk and replace it with a new disk. If a rebuild does not start automatically, assign the new disk as a Global Hot Spare and the rebuild will start. Search "Troubleshooting RAID" on support.dell.com for more information.

PDR95

Message	Microcode update on arg1 has failed.
Arguments	arg1 = physical disk
Detailed Description	The attempt to update the physical disk has failed. This is due to too much activity on the bus, a bad update package, or a bad disk.
Recommended Response Action	Retry the update. If the update fails a second time, verify the update package is valid. If the update package is valid, replace the failing disk. Contact technical support if the problem persists.

Detailed Description The Storage Controller is successfully installed. However, settings of the Secure Enterprise Key Manager (SEKM) feature are not automatically restored after replacing the Storage Controller.

Recommended Response Action Enable the SEKM feature on the replaced card using any of the iDRAC interfaces. To enable by using iDRAC GUI, click Actions > Edit > Security option in Storage > Controllers. To enable by using CLI, run the following RACADM command: racadm storage setencryptionmode: -mode SEKM. For more information, see the latest version of the iDRAC Users Guide available on the support site.

Message	arg1 is switched OFF.
Arguments	arg1 = PSU Sensor Name
Detailed Description	The power supply is not providing any power. This may be because the power supply switch is in the off position or the power supply has failed.
Recommended Response Action	Check whether the power switch on the power supply unit is turned off or on. If it is turned off, turn it on. If the problem is not corrected, verify that the power cord is attached and functional. See the storage hardware documentation for more information.

PSU101

Message Power supply arg1 is not present.
 Arguments arg1 = power supply unit

The power supply unit identified in the message is not present, because of the one of the following reasons: 1) The power supply unit is not correctly seated. 2) The power cable may not be connected properly or disconnected. 3) The power supply unit has failed. 4) There is an input power failure.

Detailed Description

Recommended Response Action: Do one of the following to resolve the issue: 1) reseal the power supply unit. 2) Reconnect the power cable to the power supply unit. 3) Install a new power supply unit 4) Restore the input power supply.

Message The Power Supply Unit arg1 reported an input undervoltage fault and has been turned off.

Arguments arg1 = slotnum

Detailed Description The Power Supply Unit (PSU) identified in the message was turned off because the input undervoltage fault occurred.

Recommended Response Action 1) Check the Power Supply Unit (PSU) input power source. 2) Press and hold the power button for 30 seconds. The PSU is powered on. 3) If the issue persists, contact technical support.

PSU8531

Message The Power Supply Unit arg1 reported input overcurrent fault and has been turned off.

Arguments arg1 = slotnum

Detailed Description The Power Supply Unit (PSU) identified in the message was turned off because the input overcurrent fault occurred.

Recommended Response Action 1) Verify system load is within the Power Supply Unit (PSU) capacity and no short circuits are present in the system. 2) Press and hold the power button for 30 seconds. The PSU is powered on. 3) If the issue persists, contact technical support.

PWR2240

Message	Unable to turn on the server because the chassis infrastructure not ready.
Detailed Description	The server did not turn on because the chassis infrastructure is not ready. The chassis infrastructure includes: PCIe subsystem, storage components, and the management module.
Recommended Response Action	Check the status of the chassis infrastructure in the Management Module (MM) interface. Wait until the chassis infrastructure components are fully turned on.
Category	Audit (PWR = Power Usage)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

PWR2242

Message	Unable to turn on the server because a Mezzanine card is incompatible with the I/O Module or PCIe subsystem.
Detailed Description	The server did not turn on because an NDC or Mezzanine card is incompatible with the I/O Module or PCIe subsystem.
Recommended Response Action	Check the release notes for the product and make sure to install compatible components in the server.
Category	Audit (PWR = Power Usage)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

PWR2246

Message	Unable to allocate power for servers to turn on because the Management Module (MM) is initializing chassis infrastructure components.
Detailed Description	The chassis infrastructure components are being initialized and are not ready to grant power on permission to the servers.

Recommended Response Action: Wait until the chassis infrastructure has been initialized and then retry the operation. To check that the infrastructure is initialized, using the RACADM command line utility run the command "racadm getmodinfo" and check that the "pwrstate" field is on for the chassis component.

Category: Audit (PWR = Power Usage)

Message	The OCP NIC installed in the server requires arg1 Watts, which requires more power than the maximum power supported in the AUX (S5) mode of the server model.
Arguments	arg1 = Wattage
Detailed Description	The OCP NIC installed in the server requires the power identified in the message, which requires more power than the maximum power supported in the AUX (S5) mode of the server model. Features such as Shared LoM and Wake-on-LAN (WoL), which require the OCP NIC to be enabled in the AUX (S5) mode, will not be supported in such a case.
Recommended Response Action	Make sure that the OCP NIC is supported by the server model. If not, replace the OCP NIC. For information about supported OCP NICs, refer to the iDRAC Users Guide available on the support (also, refer to the Installation and Service Manual of the specific server model?).

PWR8557

Message	The System Input Power Cap is too low to be enforced using the current Power Supply configuration.
Detailed Description	The current Power Cap setting cannot be enforced. This may be the result of changing the redundancy mode or by changing the PSUs. The power cap setting must be increased to be usable.
Recommended Response Action	Increase the Power Cap value. To increase the Power Cap do one of the following: 1) Using CMC Web interface: Select "Chassis Overview" -> Power -> Configuration and then adjust System Input Power Cap values. 2) Run the following RACADM command at the command line interface: "config -g cfgChassisPower -o cfgChassisPowerCap ".Try setting the power cap above the lower bound displayed on the power configuration page.

Message Unable to turn on I/O Module arg1 due to insufficient chassis power.

Arguments arg1 = IOM slot name

Detailed Description Unable to turn on the I/O Module identified in the message due to insufficient chassis power.

Recommended Response Action Utilize the Chassis Management Controller/Management Module (CMC/MM) web interface to check available power and I/O Module power requirements. If sufficient power is available, restart the CMC/MM and retry the operation. If sufficient power is not available due to an insufficient number of PSUs, add additional PSU(s) and reinsert the I/O Module.

PWR8562

Message Unable to power on the server arg1 before power on timer expired.

Arguments arg1 = server number

Unable to power on the server before the power on timer has expired. This happens if the server did not show power on status change within 30 seconds after the power on operation was initiated. This issue may also occur when iDRAC is rebooting.

The Server may need more time to power on. Wait for ten seconds and check the power status. If the server was not powered on, retry the operation. If the issue persists, remove and reinsert the server, wait for the iDRAC to complete startup, and retry the operation.

PWR8594

Chassis Management Controller is unable to set the Enhanced Cooling Mode because the requested power arg1 AC Watt is more than available power arg2 AC Watt.

Message

Arguments arg1 = requested watts arg2 = available watts

Detailed Description The available power is not sufficient to enable the Enhanced Cooling Mode feature.

Recommended Response Action Make sure there is enough power supply to enable the Enhanced Cooling Mode feature. Go to, the Chassis Overview > Power > Power Budget Status. In the Total Input Power Available For Allocation field view the available power. To add more power, insert more PSUs or remove unused components from the chassis.

PWR8595

Chassis Management Controller is unable to turn on server arg1 due to insufficient power for the arg2 .

Message

Arguments arg1 = slot id arg2 = chassis component name

Detailed Description The turn-on request for the server identified in the message did not succeed because of insufficient power to the chassis component identified in the message.

The Chassis Management Controller (CMC) will retry turning on the server and the corresponding components associated to the server after a predefined interval. If the issue persists, refer to the Managing and Monitoring Power section in the CMC User Guide for more information on configuring power management settings.

Message: Chassis Management Controller is unable to turn on server- arg1 because PSU redundancy is lost and the available power is insufficient.

Arguments: arg1 = slot number

Detailed Description: The Chassis Management Controller cannot turn on the server identified in the message, because PSU redundancy is lost or PSUs are removed. Sufficient power is not available for the operation.

Recommended Response Action: Make sure there is enough power supply to distribute power. Go to, the Chassis Overview > Power > Power Budget Status. In the Total Input Power Available For Allocation field, view the available power. To add more power, insert more PSUs or remove unused components from the chassis. When enough power is available, retry the operation.

PWR8672

The server in slot arg1 does not have a arg2 mezzanine card in slot arg3 .

Message

Arguments arg1 = server slot number arg2 = card type arg3 = mezzanine position number

The server identified in the message does not have a card in the Mezzanine slot as identified in the message. A mezzanine card position is identified with the following numbers: For quarter-width server, the position number is 1. For half-width server mezzanine C & B maps to position numbers 1 & 2 respectively. For full-width server, mezzanine C & B on the upper- or left part of the server maps to position numbers 1 & 2 respectively. Mezzanine C & B on the lower- or right part of the server maps to position numbers 3 & 4 respectively.

Detailed Description

Recommended Response

Action Insert a mezzanine card in the slot identified in the message.

RAC0158

Message Uploading kerberos keytab has failed.

Detailed Description The Kerberos keytab is needed by the iDRAC to authenticate itself to the Kerberos (Active Directory) server. It is created on the AD server, and issued for the iDRAC. Its like a password, and therefore should be kept secret.

Recommended Response Action The Kerberos keytab file may be corrupt. Upload a valid Kerberos keytab file.

Message	The Character Accumulate Interval value is invalid. Expected range: 1-255.
Detailed Description	The amount of time iDRAC waits before sending a partial Serial Over LAN (SOL) data packet. This parameter is specified in milliseconds. It is recommended to use 10 milliseconds for optimal performance.
Recommended Response Action	Enter a valid Character Accumulate Interval value. Expected range: 1-255.

RAC0295

Message	The Character Send Threshold value is invalid. Expected range: 1-255.
Detailed Description	This is the number of characters per Serial Over LAN (SOL) data packet. When the number of characters accepted by iDRAC is equal to or greater than the Character Send Threshold value, iDRAC starts transmitting SOL data packets that contain the numbers of characters equal to or less than the Character Send Threshold value. If a packet contains fewer characters than this value, it is defined to be a partial SOL data packet. It is recommended to use 255 characters for optimal performance.
Recommended Response Action	Enter a valid Character Send Threshold value. Expected range: 1-255.

RAC0501

Message No physical drives with real time monitoring capability attached to an HBA or PERC adapter were detected. PCH connected drives are not monitored by iDRAC.

Detailed Description Physical disks cannot be displayed. This error may occur if the host system is powered off or the physical disks are removed or if no real time monitoring capable disks are attached to the PERC or HBA.

Do one of the following:1) Make sure that the supported physical drives are inserted into the enclosure or attached to the backplane.2) Make sure that the latest iDRAC firmware is installed.3) Reset iDRAC to its initial state. To reset, click Maintenance > Diagnostics > Reset iDRAC to Factory Defaults. Else, run the RACADM command at the Command Line Interface (CLI): racadm racresetcfg.4) Restart the server.To restart iDRAC, click Configuration > Power Management > Power Control > Power Cycle System (cold boot). Else, run the RACADM command at the CLI: racadm serveraction powercycle.5) Make sure that the host server is powered on.

Message	There are no virtual disks to be displayed.
Detailed Description	There are no virtual disks to be displayed. There may be no virtual disks created, the controller(s) may not be in RAID mode, or there may be pending creation or deletion jobs that have not completed. Check the following: 1) Check if the server is turned off. If the server is turned off, turn it on and wait until POST completes. 2) If create virtual disk operation(s) are in a pending state, complete the creation process. To complete the virtual disk(s) creation, go to the Pending Operations page and create a configuration job on the appropriate controller. 3) If delete virtual disk operation(s) are in pending state, then cancel the operation. To cancel delete virtual disk pending operation(s), go to the Pending Operations page and delete all pending operation(s) on the appropriate controller. 4) If the Controller(s) are in HBA mode, switch the controller(s) to RAID mode. To switch controller(s) to RAID mode using the F2 System Setup utility, go to Device Settings > RAID Controller > Controller Management > Advanced Controller Management > Switch to RAID mode.

RAC1070

Message	Unable to set the maximum non critical threshold value of arg1 , because the value entered is greater than, or equal to the maximum critical threshold value.
Arguments	arg1 = System Board Inlet Temp
Detailed Description	The maximum non critical threshold value identified in the message cannot be set, because the value entered is greater than or equal to the maximum critical threshold value.

RAC1072

Message	Unable to set maximum non critical threshold value of arg1 , because the value entered is less than, or equal to the minimum critical threshold value.
Arguments	arg1 = System Board Inlet Temp
Detailed Description	The maximum non critical threshold value identified in the message cannot be set, because the value entered is less than or equal to the minimum critical threshold value. Check the minimum critical threshold level using an appropriate RACADM command. For example, to view the minimum critical threshold value of a sensor, run the racadm getsensorinfo command at the command line interface, and then retry the operation. For more information about other RACADM commands, run the racadm help command.

Message The Collect System Inventory On Restart (CSIOR) feature is disabled.

Detailed Description: The Collect System Inventory On Restart (CSIOR) feature is currently disabled. If the system inventory is not up-to-date, the system configuration profile that is being copied will not have the latest inventory information.

Recommended Response Action: To get latest inventory information, cancel the current job, run "racadm set LifecycleController.LCAttributes.CollectSystemInventoryOnRestart 1" to enable CSIOR, and re-initiate the operation.

Message Lifecycle Controller in use. This job will start when Lifecycle Controller is available.

Detailed Description The Lifecycle Controller is unable to access internal storage currently in use by another operation.

Recommended Response Action Make sure all other Lifecycle Controller operations are finished and retry the operation. Using the iDRAC Web UI, select Server (on 12th and 13th Generation servers) or Maintenance (on 14th Generation Servers) and then Job Queue, check the job queue for unfinished jobs and wait for the jobs to finish before retrying the operation. Also, check whether there are update packages being executed in the server OS and wait for these operations to finish before retrying the operation. For remote web services API access, make sure that the GetRemoteServicesAPIStatus method returns Ready status, and then retry the operation. If OS Deploy has been enabled then boot the server into LC UI to clear. Always exit LC UI using "Exit" and not by removing power.

Message	The network file transfer of an update package was not successful.
Detailed Description	The update package file download was not successful. This could be due to the following: 1) The update package file is missing, 2) The host address, share, user name, and password information are correct but the file name was invalid, 3) The network file share could not be mounted, or 4) The network file share disconnected before the transfer was complete.
Recommended Response Action	Check the network connection and access to the update package from the iDRAC.

Message

The specified repository catalog is not supported.

Detailed Description

The specified repository catalog is either not supported or the structure is incorrect. Only Windows Update Packages are supported by iDRAC and Lifecycle Controller for the operation. If the structure is incorrect, either the expected elements are not present, or unexpected elements are present in the catalog XML file. The catalog XML file should be generated by the Repository Manager tool.

Recommended Response Action

Check the repository catalog file name and contents. Rebuild the catalog XML file using Repository Manager by selecting Windows Update Packages only, and retry the operation.

Message Unable to downgrade the Chassis firmware because the Chassis Management Controller (CMC) does not allow the downgrade operation when the Federal Information Processing Standard (FIPS) mode is enabled.

Detailed Description The Chassis firmware cannot be downgraded because the Chassis Management Controller (CMC) does not allow the downgrade operation when the Federal Information Processing Standard (FIPS) mode is enabled.

Recommended Response Action Disable the Federal Information Processing Standard (FIPS) mode, and then retry the operation. To downgrade by using Chassis Management Controller (CMC) graphical user interface (GUI), click Chassis Overview > Network > Federal Information Processing Standards (FIPS), select "Disabled", and then click "Apply Changes". To downgrade by running RACADM command at the command line interface (CLI), enter "racadm racresetcfg".

RED149

Message Unable to create the job because a CPLD firmware job and non-CPLD job cannot be performed at the same time.

Detailed Description The firmware cannot be updated on the devices in the list because it has both CPLD and non-CPLD firmware types.

Recommended Response Action 1) Select the check box corresponding to the firmware to be updated, and then click Install. The selected firmware is installed. If the list has both types of firmware update packages then either CPLD or non-CPLD firmware is grayed out based on the type of firmware first listed. For example, if a CPLD-based firmware is listed first in the Update Details section, then subsequent non-CPLD based firmware will be grayed out and cannot be selected. 2) After successfully updating the selected firmware, retry updating the firmware that was earlier grayed out. 3) Make sure there is no other Job already running if you are updating the CPLD firmware.

Message	arg1 .
Arguments	arg1 = xml-message
Detailed Description	The Software Defined Storage subsystem on the host Operating System has reported a failure.
Recommended Response Action	Verify the health status of the hard drive identified in the message and retry the operation. To check the health status by using the iDRAC GUI, on the iDRAC dashboard, click Storage > Physical Disks. To run a RACADM command, enter "racadm raid get pdisks -o -p status" at the Command Line Interface (CLI).

Unable to complete the operation because the token has an "nbf" (not valid before) key value arg1 is later than the current system date and time arg2 .

Message

Arguments arg1 = token Nbf Date Time arg2 = current System Date Time

Detailed Description The operation cannot be completed because the token has an "nbf" (not valid before) key value which is later than the current system date and time identified in the message.

Recommended Response Action Use a token with a "nbf" (not valid before) date and time which is later than than the current system date and time, and then retry the operation. If the issue persists, contact your system administrator.

SEKM021

Message A request to rekey all devices was received successfully on the iDRAC.

Detailed Description A request is successfully received by iDRAC to rekey all the secure capable devices. As each device completes the rekey process, a log entry will be created in the Lifecycle Controller log indicating the status of the rekey for that device.

Recommended Response Action Check the Lifecycle Controller logs for rekey completion status for each device in securedmode.

SEKM038

Message Unable to perform the Reset to Factory Defaults operation because the key management security feature is not disabled on iDRAC.

Detailed Description The Reset to Factory Defaults operation cannot be performed because the Secure Enterprise Key Manager (SEKM) or iDRAC Local Key Management feature is not disabled on iDRAC. Disabling key management security feature is a pre-requisite because the Reset To Factory Defaults operation will reset the key management security feature that could result in secured devices not getting unlocked, and therefore data on these devices becoming inaccessible.

Recommended Response Action Disable the key management security feature, Secure Enterprise Key Manager (SEKM), or iDRAC Local Key Management (iLKM) by running the following RACADM command at the Command Line Interface (CLI), and then retry the operation: For SEKM: racadm sekm disable. For iLKM: racadm iLKM disable.

Message iDRAC is unable to switch the PERC security mode of the device arg1 from Local Key Management (LKM) to Secure Enterprise Key Manager (SEKM).

Arguments arg1 = deviceName

Detailed Description iDRAC is unable to switch the PERC security mode of the device identified by the device name from Local Key Management(LKM) to Security Enterprise Key Manager (SEKM).

SEKM067

Message	The device arg1 is in Local Key Management security mode while iDRAC is in Secure Enterprise Key Manager security mode.
Arguments	arg1 = Device Description
Detailed Description	Indicates that a RAID controller in Local Key Management (LKM) security mode has been detected on a server with iDRAC in Secure Enterprise Key Manager (SEKM) security mode. It is recommended to switch the PERC from LKM to SEKM mode.
Recommended Response Action	Use any of the iDRAC interfaces and switch the PERC from LKM to SEKM mode. If the current PERC firmware version does not have the PERC LKM to SEKM transition capability then update the PERC firmware to a version that supports the transition.

SEKM089

Message iDRAC is unable to perform security operation on the device arg1 as no security mode has been enabled on iDRAC.

Arguments arg1 = device_description

Detailed Description iDRAC has detected a device identified by the device description to be in a secured state but security has not been enabled on iDRAC. The device will remain in a locked or foreign state and no user data will be accessible.

Recommended Response Action 1) To unlock or secure the device enable Secure Enterprise Key Manager (SEKM) or iDRAC Local Key Management (iLKM) security mode on iDRAC. To enable SEKM or iLKM security mode on iDRAC refer to the iDRAC users guide.2) To use this device in an unsecured state disable security on the device. Note that disabling security could erase all user data on this device. For controllers perform a disable security operation whereas for SED perform a PSID based Revert operation using any of the iDRAC interfaces. Refer to the iDRAC user guide for the relevant command.3) To retain user data on the device move the device back to the original system.

SEKM097

Message iDRAC is unable to perform the requested operation because one or more devices on the server are secured by the oldest iDRAC key that will be purged out or made obsolete.

Detailed Description The requested operation will purge the oldest key stored on iDRAC. One or more devices on the server are secured by the oldest iDRAC key. If these devices cannot be rekeyed then the devices will be locked by a key that will be purged by the requested operation resulting in these devices being locked out on the next server restart. To avoid this situation, iDRAC is unable to perform the requested operation.

Recommended Response Action To allow iDRAC to rekey the device to the iDRACs current key,do one of the following: 1) Manually remove and reinsert the device to enable iDRAC to rekey it to the current iDRAC key. 2) Restart the server by running the following command at the Command Line Interface (CLI): racadm serveractionpowercycle. After the device is rekeyed to the current iDRAC key then retry the operation. If the device cannot be rekeyed to the current iDRAC key, back up data from the device, remove the device from the server, and then retry the operation.

iDRAC is unable to perform security operation on the device arg1 because iDRAC cannot recognize the format of the key identifier stored on the device because of the following issue: arg2 .

Message

Arguments

arg1 = device_description arg2 = issueString

Detailed Description

iDRAC is unable to perform security operation on the device identified in the message because iDRAC cannot recognize the format of the key identifier stored on the device.

Recommended Response Action

Do the following:1) Disable security on the device. Note that disabling security will erase all user data on the device. For controllers, perform the Disable security Operation. For SEDs, perform the PSID-based Revert operation using any of the iDRAC interfaces. Run the following RACADM command at the Command Line Interface (CLI):racadm storage cryptographicerase: racadm storage cryptographicerase: -psid .2) To retain user data on the device, move the device back to the original system.

SIOM0027

Message	SAS IOM arg1 has a configuration that is not consistent with chassis.
Arguments	arg1 = IOM name

Detailed Description	This event indicates that the foreign SAS IOMs are inserted to the chassis.
Recommended Response Action	The configuration mismatch could be due to incorrect switch movement. Do one of the following: 1) Replace the switch. 2) Run the ForceActive command at the command line interface to override the mismatch and use the local configuration, and then apply to both switches.
Category	System Health (SIOM = SAS IOM)
Severity	Critical
Redfish Event Type	Alert
	No alerts are applicable for this message

SIOM0028

Message	The configuration of SAS IOM device arg1 is consistent with the configuration of Chassis.
Arguments	arg1 = IOM name
Detailed Description	The configuration of both SAS IOM device identified in the message is consistent with the configuration of Chassis.
Recommended Response Action	No response action is required.
Category	System Health (SIOM = SAS IOM)
Severity	Informational
Redfish Event Type	Alert

SIOM0029

Message	SAS IOM arg1 has inconsistent firmware versions in its components.
Arguments	arg1 = IOM name
Detailed Description	The SAS IOM device identified in the message has inconsistent firmware versions in its components such as SoC, IOC, and expander.
Recommended Response Action	Update the SAS IOM with the latest firmware version.
Category	System Health (SIOM = SAS IOM)
Severity	Warning
Redfish Event Type	Alert
	No alerts are applicable for this message

SIOM0030

Message	SAS IOM arg1 requires a power-cycle operation to enable the new firmware version.
Arguments	arg1 = IOM name
Detailed Description	The SAS IOM device identified in the message requires a power-cycle operation to enable the new firmware version.
Recommended Response Action	Power cycle the SAS IOM device identified in the message.
Category	System Health (SIOM = SAS IOM)
Severity	Warning
Redfish Event Type	Alert
	No alerts are applicable for this message

SIOM0031

Message	The SAS fabric for SAS IOM arg1 is unable to manage the storage assignment.
Arguments	arg1 = IOM name
Detailed Description	The SAS IOM device identified in the message is unable to manage the storage assignment.
Recommended Response Action	Resolve an error condition in one of more SAS IOMs. For information about managing SAS IOM devices, refer to OpenManage Enterprise Modular Version Users Guide available on the support site.
Category	System Health (SIOM = SAS IOM)
Severity	Critical
Redfish Event Type	Alert
	No alerts are applicable for this message

SIOM0032

Message	The SAS fabric for SAS IOM arg1 is able to manage the storage assignment.
Arguments	arg1 = IOM name
Detailed Description	The SAS IOM device identified in the message is able to manage the storage assignment.
Recommended Response Action	No response action is required.
Category	System Health (SIOM = SAS IOM)
Severity	Informational
Redfish Event Type	Alert
	No alerts are applicable for this message

SIOM0033

Message	The SAS IOM arg1 has detected multiple ECC memory errors.
Arguments	arg1 = IOM name
Detailed Description	The SAS IOM device identified in the message has detected multiple Error-correcting Code (ECC) errors.
Recommended Response Action	Replace the SAS IOM device. For information about managing SAS IOM devices, refer to the MX5000s SAS IOM Installation Guide available on the support site.
Category	System Health (SIOM = SAS IOM)
Severity	Critical
Redfish Event Type	Alert
	No alerts are applicable for this message

SIOM0034

Message	An unsupported device has been detected in arg1 .
Arguments	arg1 = Bay
Detailed Description	An unsupported SATA drive is detected in chassis in the slot indicated in the message.
Recommended Response Action	Remove unsupported device from chassis.
Category	System Health (SIOM = SAS IOM)
Severity	Informational
Redfish Event Type	Alert
	No alerts are applicable for this message

SIOM0035

Message	A new drive has been added to arg1 .
Arguments	arg1 = Bay
Detailed Description	This event indicates that a drive has been added.
Recommended Response Action	No response is required.
Category	System Health (SIOM = SAS IOM)
Severity	Informational
Redfish Event Type	ResourceAdded
	No alerts are applicable for this message

SIOM0036

Message	A drive has been removed from arg1 .
Arguments	arg1 = Bay
Detailed Description	This event indicates that a drive has been removed.
Recommended Response Action	No response is required.
Category	System Health (SIOM = SAS IOM)
Severity	Informational
Redfish Event Type	ResourceRemoved
	No alerts are applicable for this message

SIOM0037

Message	Unable to communicate with the device because of an internal error.
Detailed Description	Unable to communicate with the device because of an internal error.
Recommended Response Action	Retry the operation. For information about managing SAS IOM devices, refer to OpenManage Enterprise Modular Version Users Guide available on the support site.
Category	System Health (SIOM = SAS IOM)
Severity	Critical
Redfish Event Type	Alert

Message

Unable to create the SupportAssist job for arg1 .

Arguments

arg1 = Job name

Detailed

Description

The SupportAssist job identified in the message cannot be created.

Do the following: 1) If a job operation is already running, retry the operation after the existing job is completed. 2) If job count has reached maximum count supported (256 jobs for iDRAC9), reduce the job count by deleting one or more jobs. To delete all completed jobs using RACADM command line utility, type "racadm jobqueue delete --all" or using iDRAC GUI via Maintenance->Job Queue. Once jobs are deleted retry the operation. 3) If the issue persists, reset the iDRAC and then retry the operation. To reset the iDRAC using RACADM command line utility, type "racadm racreset" or using iDRAC GUI via Maintenance->Diagnostics->Reset iDRAC.

STOR041

Message Invalid value for AttributeName arg1

Arguments arg1 = attribute name

Detailed Description Unable to complete the requested operation because an invalid value for the attribute identified in the message is specified.

Recommended Response Action Specify a valid value for the attribute identified in the message and retry the operation.

Message Unsupported value for AttributeName arg1

Arguments arg1 = attribute name

Detailed Description Unable to complete the requested operation because the attribute value specified is not supported in the current configuration.

Recommended Response Action Specify a value for the attribute identified in the message by using one of the possible values currently available for that attribute.

Message One or more selected physical disk drives are part of virtual disk that is not Secondary RAID Level 0.

Detailed Description One or more physical disk drives selected for the operation are part of a virtual disk that is not Secondary RAID Level 0.

Recommended Response Action This operation is not supported unless the previous virtual disk on the selected physical disk drives are deleted first. To perform the operation, delete any virtual disk on the selected physical disks drives and retry the operation.
