STOR057

Message The specified RAID controller is not currently available for configuration.

Detailed Description The instrumentation for the specified RAID controller is not in state where the requested operation can be performed because system inventory collection (the CSIOR feature) has not been executed.

Recommended Response Action Enable the CSIOR (Collect System Inventory On Restart) feature and restart the server to cause CSIOR execution. Make sure the Remote Services status is Ready and retry the operation. To get the Remote Services status, invoke the GetRSStatus method. For more information about this method, see Lifecycle Controller Remote Services Guide.

Message The operation cannot be completed either because the operation is not supported on the target device, or the RAIDType of "MD Software RAID" does not allow the operation.

Detailed Description Unable to complete the operation either because the operation is not supported on the target device, or the RAIDType of "MD Software RAID" does not allow the operation.

Recommended Response Action Do the following and retry the operation: 1) Make sure that the target device supports the operation. 2) Make sure that if the RAIDType is set to "MD Software RAID" ensure that is the desired value. For more information, see the iDRAC Users Guide available on the support site.

STOR103

Message
Unable to convert the physical disk drive to Ready status because either the input value is not supported or the controllers current RAID mode does not allow the input value.

Detailed Description
The physical disk drive cannot be converted to Ready status because either the input value is not supported or the controllers current RAID mode does not allow the input value. The RAIDMode may not match the RAIDType or the SoftwareRAIDMode requested.

Recommended Response Action
Make sure that the input value is correct and retry the operation. If RAIDMode has a value then the requested RAIDType or SoftwareRAIDMode value must match.

STOR104

Message
Unable to start the operation because the operation is not supported on the NVMe RAID drives.

Detailed Description
The operation cannot be started because the operation is not supported on the NVMe RAID drives. Either the drive is behind hardware RAID controller or the RAIDMode may not match the RAIDType or the SoftwareRAIDMode requested.

Recommended Response Action: Set the NVMeMode attribute of BIOS to NonRAID and retry the operation. To set the NonRAID mode, see the staged objects example of setting Single-Object in the SET command section of the iDRAC RACADM CLI Reference guide available on the support site. To verify the setting by using iDRAC Graphical User Interface (GUI), click Configuration > BIOS Settings > NVMe Settings. No response action is required if the NVMe drives are behind hardware RAID controller, because this operation is not supported.

STOR13

Message	Unable to set the operation mode of the newly inserted storage sled in slot arg1 to Split Single or Split Dual Host, because the storage sled has only one PERC controller.
Arguments	arg1 = slot number
Detailed Description	The operation mode of the newly inserted storage sled in the slot identified in the message cannot be set because the storage sled has only one PERC controller. The operation mode will only be Join after part replacement.
Recommended Response Action	Make sure that the newly inserted storage sled has the same number of PERC controllers as the previous storage sled so that the new sled will have the same operation mode after part replacement.

STOR17

The fault-tolerant pair of RAID controllers arg1 and arg2 can have issues in their PCIe fabric because both controllers are on the same PCIe fabric.

Message

Arguments arg1 = RAID controller 1 arg2 = RAID controller 2

Detailed Description The two RAID controllers are on the same PCIe Fabric. This means that an issue with a single PCIe switch or Mezzanine card could result in the loss of all storage functionality from this pair of controllers.

Recommended Response Action Change the slot location of one of the RAID Controllers.

STOR394

Message	Unable to discover the physical drive installed on the enclosure arg1 , slot arg2 , arg3 , because of incompatibility issues.
Arguments	arg1 = enclID arg2 = slotNum arg3 = controller FQDD
Detailed Description	The physical drive identified in message cannot be discovered because of incompatibility issues. Some of the issues because of which a device cannot be discovered are as follows: Missing namespace in NSID 1. No namespace is created. Logical Block Addressing (LBA) size is not either one of these: 512 B or 4K. When the Protection Information (PI) feature is enabled. 1) Resolve the issue by using the instructions provided on the interface (for example, HII or PERC CLI). 2) Else, if a resolution is not suggested by the interface because the interface does not support, do the following: 2a) Restart the server. 2b) When the company logo is displayed, press F2. 2c) Click Device Setting > Select the RAID Controller > Main Menu > Hardware Components > Enclosure Management. 3) If the issue persists, remove the NVMe drive identified in the message, and replace it with a working drive. If the issue is not resolved, contact your service provider. For more information about repairing issues in NVMe drives, see the relevant PERC Users Guide available on the support site.

STOR5

Message: Redundancy lost. arg1

Arguments: arg1 = VD/Enclosure Name

Detailed Description: A virtual disk or enclosure has lost data redundancy. In the case of a virtual disk, one or more physical disks included in the virtual disk have failed. Due to the failed physical disk or disks, the virtual disk is no longer maintaining redundant (mirrored or parity) data. The failure of an additional physical disk will result in lost data. In the case of an enclosure, more than one enclosure component has failed. For example, the enclosure may have suffered the loss of all fans or all power supplies.

Identify and replace the failed components. To identify the failed component, select the Storage object and click the Health subtab. The controller status displayed on the Health subtab indicates whether a controller has a failed or degraded component. Click the controller that displays a Warning or Failed status. This action displays the controller Health subtab which displays the status of the individual controller components. Continue clicking the components with a Warning or Failed status until you identify the failed component. See Storage Health for more information. See the enclosure documentation for information on replacing enclosure components and for other diagnostic information.

SUP032

Message: Unable to roll back the firmware version because one or more features that do not support the Rollback feature are currently enabled.

Detailed Description: The firmware version cannot be rolled back because one or more features that do not support the Rollback feature are currently enabled. Make sure that the features that do not support the Rollback feature are disabled, and then retry the operation. For example, if PERC SEKM is enabled then rolling back to a firmware version that does not support SEKM is not allowed. Therefore, disable SEKM on iDRAC or remove the SEKM-enabled PERC controller, and then try the rollback operation.

Recommended Response Action: Unable to roll back the firmware version because one or more features that do not support the Rollback feature are currently enabled.

StorageFabric Validation Alert Event Messages

SVAL0001

Message Unable to add alert subscriber arg1 to database because the ID already exists.

Arguments arg1 = alert ID

Detailed Description The alert subscriber identified in the message cannot be added to database because the ID already exists.

Recommended Response

Action Enter a valid and unique subscriber ID and retry the operation.

Category Configuration (SVAL = StorageFabric Validation Alert)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVAL0002

Message Unable to update the alert subscriber arg1 to database because the ID does not exist.

Arguments arg1 = alert ID

Detailed Description The alert subscriber identified in the message cannot updated because the ID does not exist.

Recommended Response

Action Make sure that the subscriber ID exists by querying all alert subscription and retry the operation.

Category Configuration (SVAL = StorageFabric Validation Alert)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVAL0003

Message Unable to delete the alert subscriber arg1 to database because the ID does not exist.

Arguments arg1 = alert ID

Detailed Description	The alert subscriber identified in the message cannot be deleted because the ID does not exist.
Recommended Response Action	Make sure that the subscriber ID exists by querying all alert subscriptions and retry the operation.
Category	Configuration (SVAL = StorageFabric Validation Alert)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

SVAL0004

Message	Unable to get the alert subscriber arg1 because the ID does not exist in the database.
Arguments	arg1 = alert ID
Detailed Description	The alert subscriber identified in the message cannot be retrieved because the ID does not exist.
Recommended Response Action	Make sure that the subscriber ID exists by querying all alert subscriptions and retry the operation.
Category	Configuration (SVAL = StorageFabric Validation Alert)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

SVAL0005

Message	Unable to add or update alert subscriber because an alert subscriber with a similar content already exists.
Detailed Description	The alert subscriber cannot be added or updated because an alert subscriber with a similar content already exists.
Recommended Response Action	Make sure that the subscription content is different and retry the operation.
Category	Configuration (SVAL = StorageFabric Validation Alert)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

SVAL0006

Message	Unable to add or update alert subscriber because the data entered in the alert subscriber Protocol field is invalid.
---------	--

Detailed Description	The alert subscriber destination cannot be added or updated because the data entered in the alert subscriber Destination field is invalid.
Recommended Response Action	Enter a valid alert subscriber protocol field and retry the operation.
Category	Configuration (SVAL = StorageFabric Validation Alert)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

SVAL0007

Message	Unable to add or update the alert subscriber because the data entered in the alert subscriber Destination field is invalid.
Detailed Description	Enter valid destination field, and retry the operation.
Recommended Response Action	Enter a valid alert subscriber destination and retry the operation.
Category	Configuration (SVAL = StorageFabric Validation Alert)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

SVAL0008

Message	Unable to add or update the alert subscriber because the scheme entered in the alert subscriber Destination field is invalid.
Detailed Description	The alert subscriber cannot be added or updated because the scheme entered in the alert subscriber Destination field is invalid.
Recommended Response Action	Enter a valid alert scriber scheme in destination and retry the operation.
Category	Configuration (SVAL = StorageFabric Validation Alert)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

SVAL0009

Message	Unable to add or update the alert subscriber because the host data entered in the alert subscriber Destination field is invalid.
Detailed Description	Enter a valid host alert subscriber destination and retry the operation.

Recommended Response Action Enter a valid host alert subscriber destination and retry the operation.
Category Configuration (SVAL = StorageFabric Validation Alert)
Severity Warning
Redfish Event Type
No alerts are applicable for this message

SVAL0010

Message Unable to add or update the alert subscriber because the data entered in the alert subscriber HTTP header is invalid.
Detailed Description The alert subscriber cannot be added or updated because the HTTP header data entered in the alert subscriber is invalid.
Recommended Response Action Enter a valid alert subscriber HTTP header and retry the operation.
Category Configuration (SVAL = StorageFabric Validation Alert)
Severity Warning
Redfish Event Type
No alerts are applicable for this message

StorageFabric Validation End Point Event Messages

SVEP0101

Message Unable to create a Direct Discovery Controller because it already exists.
Detailed Description The Direct Discovery Controller cannot be created because it already exists.
Recommended Response Action Delete the existing entry and retry the operation.
Category Configuration (SVEP = StorageFabric Validation End Point)
Severity Warning
Redfish Event Type
No alerts are applicable for this message

SVEP0102

Message Unable to retrieve or update Direct Discovery Controller because it does not exist.

Detailed Description	The Direct Discovery Controller cannot be retrieved or updated because the entry does not exist.
Recommended Response Action	Enter a valid Direct Discovery Controller ID and retry the operation.
Category	Configuration (SVEP = StorageFabric Validation End Point)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

SVEP0103

Message	Unable to create an entry because an invalid IP address is entered.
Detailed Description	The entry cannot be created because an invalid IP address is entered.
Recommended Response Action	Enter a valid IP address and retry the operation.
Category	Configuration (SVEP = StorageFabric Validation End Point)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

SVEP0104

Message	Unable to create an entry because an invalid IP address family type is entered.
Detailed Description	The entry cannot be created because an invalid IP address family type is entered.
Recommended Response Action	Enter a valid IP address family such as IPv4 or IPv6 and retry the operation.
Category	Configuration (SVEP = StorageFabric Validation End Point)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

SVEP0105

Message	Unable to create an entry because an invalid Transport Type is entered.
Detailed Description	The entry cannot be created because an invalid Transport Type is entered.

Recommended Response Action Enter a valid transport type and retry the operation.
Category Configuration (SVEP = StorageFabric Validation End Point)
Severity Warning
Redfish Event Type
No alerts are applicable for this message

SVEP0106

Message Unable to create subsystems because it already exists.
Detailed Description The subsystem cannot be created because it already exists.
Recommended Response Action Delete the existing Subsystem entry and retry the operation.
Category Configuration (SVEP = StorageFabric Validation End Point)
Severity Warning
Redfish Event Type
No alerts are applicable for this message

SVEP0107

Message Unable to retrieve or update the subsystem because it does not exist.
Detailed Description The subsystem cannot be retrieved or updated because the entry does not exist.
Recommended Response Action Enter a valid subsystem ID and retry the operation.
Category Configuration (SVEP = StorageFabric Validation End Point)
Severity Warning
Redfish Event Type
No alerts are applicable for this message

SVEP0108

Message Unable to create the Host entry because it already exists.
Detailed Description The host cannot be created because the same entry exists.
Recommended Response Action Delete the existing Host entry and retry the operation.
Category Configuration (SVEP = StorageFabric Validation End Point)

Severity Warning

Redfish Event
Type

No alerts are applicable for this message

SVEP0109

Message Unable to retrieve or update the host because it does not exist.

Detailed Description The host cannot be retrieved or updated because the entry does not exist.

Recommended Response Action Enter a valid host ID and retry the operation.

Category Configuration (SVEP = StorageFabric Validation End Point)

Severity Warning

Redfish Event
Type

No alerts are applicable for this message

SVEP0110

Message Unable to create Direct Discovery Controller because license token is not available.

Detailed Description The Direct Discovery Controller cannot be created because license token is not available.

Recommended Response Action Retry creating the Direct Discovery Controller later when the license token is freed up.

Category Configuration (SVEP = StorageFabric Validation End Point)

Severity Warning

Redfish Event
Type

No alerts are applicable for this message

SVEP0111

Message Unable to delete the subsystem because it is online.

Detailed Description The subsystem cannot be deleted because it is online. Only subsystems that are offline or manually added can be deleted.

Recommended Response Action Make sure that the subsystem is offline and retry the operation.

Category Configuration (SVEP = StorageFabric Validation End Point)

Severity Warning

Redfish Event
Type

No alerts are applicable for this message

SVEP0112

Message	Unable to delete the host because it is online.
Detailed Description	The host cannot be deleted because it is online. Only hosts that are offline and manually added can be deleted.
Recommended Response Action	Make sure that the host is offline and retry the operation.
Category	Configuration (SVEP = StorageFabric Validation End Point)
Severity	Warning
Redfish Event Type	

No alerts are applicable for this message

SVEP0113

Message	Unable to delete the Direct Discovery Controller because it is online.
Detailed Description	The Direct Discovery Controller cannot be deleted because it is online. Only Direct Discovery Controllers that are offline can be deleted.
Recommended Response Action	Make sure that the Direct Discovery Controller is offline by deactivating and retry the operation.
Category	Configuration (SVEP = StorageFabric Validation End Point)
Severity	Warning
Redfish Event Type	

No alerts are applicable for this message

SVEP0114

Message	Unable to update the Direct Discovery Controller because it is not manually added.
Detailed Description	The Direct Discovery Controller cannot be updated because it is not manually added.
Recommended Response Action	Add Direct Discovery Controller manually and retry the operation.
Category	Configuration (SVEP = StorageFabric Validation End Point)
Severity	Warning
Redfish Event Type	

No alerts are applicable for this message

SVEP0115

Message	Unable to delete the host because this operation is not supported.
Detailed Description	The host cannot be deleted because this operation is not supported.
Recommended Response Action	No response action is required.
Category	Configuration (SVEP = StorageFabric Validation End Point)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

SVEP0116

Message	Unable to delete the subsystem because this operation is not supported.
Detailed Description	The subsystem cannot be deleted because this operation is not supported.
Recommended Response Action	No response action is required.
Category	Configuration (SVEP = StorageFabric Validation End Point)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

SVEP0117

Message	Unable to create the host because the Port ID configuration is non zero.
Detailed Description	The host cannot be created because the host Port ID can only be of value zero.
Recommended Response Action	Either remove the Port ID in the configuration or keep it as zero and retry the operation.
Category	Configuration (SVEP = StorageFabric Validation End Point)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

SVEP0118

Message	Unable to create the subsystem because the Port ID value in the configuration is out of range.
---------	--

Detailed Description	The subsystem cannot be created because the Port ID configuration is out of range. The Port ID of the subsystem is in the range of 1 to 65535.
Recommended Response Action	Enter a valid Port ID range (1 to 65535) and retry the operation.
Category	Configuration (SVEP = StorageFabric Validation End Point)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

SVEP0119

Message	Unable to create the host because the Entry Key Type value is used in configuration.
Detailed Description	The host cannot be created because the Entry Key Type is in the given configuration.
Recommended Response Action	Remove the Entry Key Type from the host configuration and retry the operation.
Category	Configuration (SVEP = StorageFabric Validation End Point)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

StorageFabric Validation Fabric Manager Event Messages

SVFM0001

Message	Unable to process Smart Fabric Services credentials configuration because missing username or password or ip address.
Detailed Description	Missing username or password or ip address in the Smart Fabric Services credentials configuration.
Recommended Response Action	Retry the configuration with valid credentials.
Category	Configuration (SVFM = StorageFabric Validation Fabric Manager)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

SVFM0002

Message Unable to process Smart Fabric Services credentials because of incorrect credentials.

Detailed Description Incorrect Smart Fabric Storage Services Credentials.

Recommended Response Action Retry the configuration with valid credentials.

Category Configuration (SVFM = StorageFabric Validation Fabric Manager)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVFM0003

Message Unable to process instance configuration because instance arg1 already configured.

Arguments arg1 = instance ID

Detailed Description Instance already configured with same instance identifier.

Recommended Response Action Retry configuration with different instance identifier.

Category Configuration (SVFM = StorageFabric Validation Fabric Manager)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVFM0004

Message Unable to process instance configuration because invalid instance id.

Detailed Description The instance configuration is unsuccessful because the given instance identifier is invalid.

Recommended Response Action Retry instance configuration with a valid instance identifier in the range 1-16.

Category Configuration (SVFM = StorageFabric Validation Fabric Manager)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVFM0005

Message Unable to process instance configuration because missing instance identifier.

Detailed Description Missing instance identifier in instance configuration.

Recommended Response Action Retry instance configuration with a valid instance identifier.

Category Configuration (SVFM = StorageFabric Validation Fabric Manager)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVFM0006

Message Unable to process instance configuration because missing service network list in instance configuration.

Detailed Description Missing service network list in instance configuration.

Recommended Response Action Retry instance configuration with service network list.

Category Configuration (SVFM = StorageFabric Validation Fabric Manager)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVFM0007

Message Unable to process instance configuration because service network configured on another instance.

Detailed Description The service network list configured on another instance.

Recommended Response Action Retry instance configuration with valid service network list.

Category Configuration (SVFM = StorageFabric Validation Fabric Manager)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVFM0008

Message Unable to process instance configuration because instance not created.

Detailed Description The instance is not created to modify the attributes.

Recommended Response Action Create the instance and retry the operation.

Category Configuration (SVFM = StorageFabric Validation Fabric Manager)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVFM0009

Message Unable to process instance arg1 configuration because of failure at Smart Fabric Stroage Services.

Arguments arg1 = instance ID

Detailed Description The instance configuration failed at Smart Fabric Stroage Services.

Recommended Response Action Retry the operation and if the issue persist contact system administrator.

Category Configuration (SVFM = StorageFabric Validation Fabric Manager)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVFM0010

Message Unable to process instance configuration because virtual networks not configured at Smart Fabric Storage Services.

Detailed Description Virtual networks associated with this instance not configured at Smart Fabric Storage Services.

Recommended Response Action Configure virtual networks at Smart Fabric Stroage Services and retry the operation.

Category Configuration (SVFM = StorageFabric Validation Fabric Manager)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVFM0011

Message Unable to process instance delete operation because instance not configured.

Detailed Description Instance identifier not configured.

Recommended Response Action No response action is required.

Category Configuration (SVFM = StorageFabric Validation Fabric Manager)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVFM0012

Message Unable to process instance arg1 delete configuration because of failure at Smart Fabric Storage Services.

Arguments arg1 = instance ID

Detailed Description Instance delete configuration failed at Smart Fabric Services.

Recommended Response Action Retry after sometime and if the issue persist contact system administrator.

Category Configuration (SVFM = StorageFabric Validation Fabric Manager)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVFM0013

Message Unable to process Direct Discovery Controller configuration due to missing ip address or address family or sequence number.

Detailed Description Missing ip address or address family or sequence number in Direct Discovery Controller configuration.

Recommended Response Action Retry Direct Discovery Controller configuration with valid ip address and address family and sequence number.

Category Configuration (SVFM = StorageFabric Validation Fabric Manager)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVFM0014

Message Unable to process Direct Discovery Controller configuration because host with same ip address is already configured.

Detailed Description TheDirect Discovery Controller already configured with the ip address.

Recommended Response Action Retry the operation with different IP address.

Category Configuration (SVFM = StorageFabric Validation Fabric Manager)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVFM0015

Message Unable to process Direct Discovery Controller configuration because invalid ip address or sequence number.

Detailed Description Invalid ip address or sequence number in Direct Discovery Controller configuration.

Recommended Response Action Retry the Direct Discovery Controller configuration with valid ip address and address family and sequence number.

Category Configuration (SVFM = StorageFabric Validation Fabric Manager)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVFM0016

Message Unable to process configuration because of Direct Discovery Controller not created.

Detailed Description The Direct Discovery Controller not created to modify the attributes.

Recommended Response Action Make sure to create the Direct Discovery Controller before modifying the attributes.

Category Configuration (SVFM = StorageFabric Validation Fabric Manager)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVFM0017

Message Unable to process the Direct Discovery Controller configuration because of failure at SmartFabric Storage Services.

Detailed Description The Direct Discovery Controller configuration failed at SmartFabric Storage Services.

Recommended Response Action: Retry the operation after sometime. If the issue persist contact system administrator.

Category: Configuration (SVFM = StorageFabric Validation Fabric Manager)

Severity: Warning

Redfish Event Type: No alerts are applicable for this message

SVFM0018

Message: Unable to process Direct Discovery Controller delete configuration because of failure at SmartFabric Storage Services.

Detailed Description: The Direct Discovery Controller delete failed at SmartFabric Storage Services.

Recommended Response Action: Retry the operation after sometime. If the issue persist contact system administrator.

Category: Configuration (SVFM = StorageFabric Validation Fabric Manager)

Severity: Warning

Redfish Event Type: No alerts are applicable for this message

SVFM0019

Message: Unable to process Direct Discovery Controller configuration because of invalid IP address.

Detailed Description: The Direct Discovery Controller IP address invalid.

Recommended Response Action: Retry the operation with valid IP address.

Category: Configuration (SVFM = StorageFabric Validation Fabric Manager)

Severity: Warning

Redfish Event Type: No alerts are applicable for this message

SVFM0020

Message: Unable to process configuration because Smart Fabric Sotrage Services not reachable.

Detailed Description: The SmartFabric Sotrage Services is not reachable.

Recommended Response Action Retry the operation after sometime. If the issue persist contact system administrator.

Category Configuration (SVFM = StorageFabric Validation Fabric Manager)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVFM0021

Message Unable to process configuration because database write failure.

Detailed Description Unable to write into the Database.

Recommended Response Action Retry the operation after sometime. If the issue persist contact system administrator.

Category Configuration (SVFM = StorageFabric Validation Fabric Manager)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVFM0022

Message Unable to process configuration because general configuration error.

Detailed Description The configuration error occurred.

Recommended Response Action Retry the operation after sometime. If the issue persist contact system administrator.

Category Configuration (SVFM = StorageFabric Validation Fabric Manager)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVFM0023

Message Unable to process configuration because of the Smart Fabric Storage Services error.

Detailed Description The configuration error occurred with the Smart Fabric Storage Services.

Recommended Response Action Retry the operation after sometime. If the issue persist contact system administrator.

Category Configuration (SVFM = StorageFabric Validation Fabric Manager)
Severity Warning
Redfish Event Type

No alerts are applicable for this message

SVFM0025

Message Unable to create CDC instance with new Vxlan because maximum network limit (16) is reached.
Detailed Description Vxlan network mapping maximum limit (16)for CDC instance is reached.
Recommended Response Action Configure Vxlan Mapping to CDC instance within the maximum allowed network limit.

Category Configuration (SVFM = StorageFabric Validation Fabric Manager)
Severity Warning
Redfish Event Type

No alerts are applicable for this message

StorageFabric Validation License Event Messages

SVLC0001

Message Unable to download the SmartFabric Storage Software base license because it already exists.
Detailed Description The base license cannot be downloaded because it already exists. A base license can be downloaded only once.
Recommended Response Action No action required.

Category Configuration (SVLC = StorageFabric Validation License)
Severity Critical
Redfish Event Type

No alerts are applicable for this message

SVLC0002

Message Unable to install the SmartFabric Storage Software expansion license because the base license is not installed.
Detailed Description The Expansion license cannot be installed because the Base lincense is not installed.

Recommended Response Action Installthevalid Base license and retry the operation. For information aboutBase and Expansion licenses, refer to theSmartFabric Storage Software RESTful API Guide.

Category Configuration (SVLC = StorageFabric Validation License)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVLC0003

Message Unable to validate the SmartFabric Storage Software license certificate because the license file is not valid.

Detailed Description The SmartFabric Storage Software license certificate cannot be validated because the license file is invalid.

Recommended Response Action Generate the license certificate by using the Dell Digital license generator and retry the operation.

Category Configuration (SVLC = StorageFabric Validation License)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVLC0004

Message Unable to install the license because the device ID associated with the license file does not match the device-id of the SmartFabric Storage Software.

Detailed Description The license file cannot be installed on the SmartFabric Storage Software because the license file generated with the device ID did not match the device ID of the SmartFabric Storage Software on which the license file was installed.

Recommended Response Action Generate a valid license file by using correct SmartFabric Storage Software device ID.

Category Configuration (SVLC = StorageFabric Validation License)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVLC0005

Message Unable to install the expansion license because the number of supported licenses (endpoints), which is defined by SmartFabric Storage Software and platform type, has exceeded the maximum value.

Detailed Description	The SmartFabric Storage Software expansion license cannot be installed because the number of supported licenses (endpoints), which is defined by SmartFabric Storage Software and platform type, has exceeded the maximum value.
Recommended Response Action	Remove the existing expansion license or add the license to another SmartFabric Storage Software, and then retry the operation.
Category	Configuration (SVLC = StorageFabric Validation License)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

SVLC0006

Message	Unable to install the license because an internal server issues such as insufficient system resource such as memory, filesystem errors.
Detailed Description	The request cannot be processed because internal server issues such as insufficient system resource or filesystem errors.
Recommended Response Action	Make sure system resources such as memory,filesystemareavailable.If the issue persists, contact your server administrator.
Category	Configuration (SVLC = StorageFabric Validation License)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

SVLC0007

Message	Unable to install the expansion license of SmartFabric Storage Software because this license is already installed.
Detailed Description	The expansion license of SmartFabric Storage Software cannot be installed because this license is already installed.
Recommended Response Action	No response action is required.
Category	Configuration (SVLC = StorageFabric Validation License)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

SVLC0008

Message	Unable to continue the configuration operation because the End User License Agreement (EULA) of the partner license is not accepted.
---------	--

Detailed Description The configuration operation cannot be continued because the End User License Agreement (EULA) of the partner license is not accepted.

Recommended Response Action Accept the End User License Agreement and retry the operation.

Category Configuration (SVLC = StorageFabric Validation License)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVLC0009

Message Unable to install the expansion license because it cannot be installed on the partner license.

Detailed Description The expansion license cannot be installed on a partner license.

Recommended Response Action No response action is required.

Category Configuration (SVLC = StorageFabric Validation License)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

StorageFabric Validation Lifecycle Manager Event Messages

SVLM0001

Message Unable to add the request because either the Centralized Discovery Controller instance identifier is invalid or not entered at all.

Detailed Description The Centralized Discovery Controller instance cannot be added because either the Centralized Discovery Controller instance identifier is invalid or not entered at all.

Recommended Response Action Enter a valid Centralized Discovery Controller ID (1-16)and retry the operation.

Category Configuration (SVLM = StorageFabric Validation Lifecycle Manager)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVLM0002

Message	Unable to add the Centralized Discovery Controller instance because either an invalid instance image version is entered or the image version is not entered.
Detailed Description	The Centralized Discovery Controller instance cannot be added because either an invalid instance image version is entered or the image version is not entered.
Recommended Response Action	Enter a valid centralized discovery controller instance image version and retry the operation.
Category	Configuration (SVLM = StorageFabric Validation Lifecycle Manager)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

SVLM0003

Message	Unable to add the Centralized Discovery Controller instance because an invalid interface name is entered.
Detailed Description	The Centralized Discovery Controller instance cannot be added because an invalid interface name is entered.
Recommended Response Action	Enter a valid Centralized Discovery Controller interface name and retry the operation.
Category	Configuration (SVLM = StorageFabric Validation Lifecycle Manager)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

SVLM0004

Message	Unable to add the Centralized Discovery Controller instance because an instance with the same instance name already exists.
Detailed Description	The Centralized Discovery Controller instance cannot be added because the same instance name already exists.
Recommended Response Action	Enter a different and unique Centralized Discovery Controller name and retry the operation.
Category	Configuration (SVLM = StorageFabric Validation Lifecycle Manager)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

SVLM0005

Message Unable to add the Centralized Discovery Controller instance because the interface arg1 does not have a valid IP address assigned to it.

Arguments arg1 = interfaceName

Detailed Description The Centralized Discovery Controller instance cannot be added because the interface identified in the message does not have a valid IP address assigned to it.

Recommended Response Action Enter a valid Centralized Discovery Controller interface ID and retry the operation.

Category Configuration (SVLM = StorageFabric Validation Lifecycle Manager)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVLM0006

Message Unable to add the Centralized Discovery Controller instance because the given interface arg1 is part of another Centralized Discovery Controller instance arg2 .

Arguments arg1 = interfaceName arg2 = instanceName

Detailed Description The Centralized Discovery Controller instance cannot be created because the interface identified in the message is part of another Centralized Discovery Controller instance.

Recommended Response Action Enter a valid unassigned Centralized Discovery Controller interface ID and retry the operation.

Category Configuration (SVLM = StorageFabric Validation Lifecycle Manager)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVLM0007

Message Unable to process the request because lifecycle operation is in progress for the given instance.

Detailed Description The operation cannot be completed because the Lifecycle operation is in progress on the instance of the Centralized Discovery Controller.

Recommended Response Action Wait for few minutes and retry the operation.

Category Configuration (SVLM = StorageFabric Validation Lifecycle Manager)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

SVLM0008

Message	Unable to process the request because invalid centralized discovery controller instance is given.
Detailed Description	The request cannot be processed because an invalid Centralized Discovery Controller instance ID is entered.
Recommended Response Action	Enter a valid Centralized Discovery Controller instance and retry the operation.
Category	Configuration (SVLM = StorageFabric Validation Lifecycle Manager)
Severity	Warning
Redfish Event Type	

No alerts are applicable for this message

SVLM0009

Message	Unable to process the request because Discovery Admin state is missing.
Detailed Description	The Centralized Discovery Controller instance cannot be added or updated because the Discovery Admin State attribute is not entered.
Recommended Response Action	Enter a valid Discovery Admin State attribute and retry the operation.
Category	Configuration (SVLM = StorageFabric Validation Lifecycle Manager)
Severity	Warning
Redfish Event Type

SVLM0088

Message	Unable to add/update the Centralized Discovery Controller because invalid number of interfaces are entered.
Detailed Description	The number of interfaces given falls out the range of 1-16.
Recommended Response	
Action	The maximum allowed number of interface is 16. Make sure you have interfaces between 1 to 16 and retry the operation.
Category	Configuration (SVLM = StorageFabric Validation Lifecycle Manager)
Severity	Warning
Redfish Event Type	

No alerts are applicable for this message

SVLM0089

Message	Unable to process the request because parent interface is not disabled.
Detailed Description	VLAN interface cannot be created because parent interface is not disabled.
Recommended Response	
Action	Disable the parent interface and retry the operation.
Category	Configuration (SVLM = StorageFabric Validation Lifecycle Manager)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

SVLM0090

Message	Unable to process the request because VLAN interfaces to the given interface already exists.
Detailed Description	Interface config type cannot be updated because VLAN interfaces to the given interface already exists.
Recommended Response	
Action	Delete VLAN interfaces for the given interface and retry the operation.
Category	Configuration (SVLM = StorageFabric Validation Lifecycle Manager)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

SVLM0091

Message	Unable to process the request because given IPv4 address is already configured.
Detailed Description	Cannot create or update the interface because given IPv4 address is already configured.
Recommended Response	
Action	Enter a unique IPv4 address and retry the operation.
Category	Configuration (SVLM = StorageFabric Validation Lifecycle Manager)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

SVLM0092

Message Unable to process the request because given IPv6 address is already configured.

Detailed Description Cannotcreate or update the interface because given IPv6 address is already configured.

Recommended Response

Action Entera unique IPv6 address and retry the operation.

SWC0725

Message iDRAC communication failure.

Detailed Description: iDRAC is busy and does not respond to iDRAC configurator IPMI requests.

Recommended Response Action: Try AC power cycling the server or upgrade the iDRAC firmware.

Category: Configuration (SWC = Software Config)

Severity: Critical

Message	The status of Media Access Control (MAC) address arg1 is not valid for Boot Identity profile operations.
Arguments	arg1 = mac address
Detailed Description	The status of Media Access Control (MAC) address identified in the message is not valid. Possible MAC address status values are unassign, assign and active. The value is "unassigned" if the MAC address is not used in any profile. The value is "assigned" if the MAC address used in a profile. The value is "active" if used in a profile applied to a server. The status must be same for all Virtual MAC addresses if assigned to a profile.
Recommended Response Action	Edit the Virtual MAC Address Pool to correct the MAC address status. Possible MAC address status values are unassign, assign and active. The value is "unassigned" if the MAC address is not used in any profile. The value is "assigned" if the MAC address used in a profile. The value is "active" if used in a profile applied to a server. The status must be same for all Virtual MAC addresses if assigned to a profile.

Message Server in slot arg1 is not ready to be accessed remotely because of one or more of the following reasons: 1) iDRAC is not ready. 2) Lifecycle Controller for of the server is disabled.

Arguments arg1 = slot number

Detailed Description The server identified in the message cannot be accessed remotely by iDRAC because of one or more of the following reasons: 1) iDRAC is not ready. 2) Lifecycle Controller for of the server is disabled.

Recommended Response Action Make sure that the iDRAC on the server identified in the message is operating properly and that Lifecycle Controller is enabled, and then retry the operation. If the issue persists, perform a virtual reset of the server and retry the operation. The server can be virtually reset by using the CMC Web GUI interface and selecting Chassis Overview > Troubleshooting > Reset Components and then selecting Virtual Reset from the drop down menu.

Message Server Profiles: request arg1 for server in slot arg2 was unsuccessful. Returned fault: arg3 .

Arguments arg1 = wsman method arg2 = slot number arg3 = wsman fault

Detailed Description The request by the WS-Man method identified in the message for the server in slot identified slot is unsuccessful.

Recommended Response Action Make sure that iDRAC is ready and system is functioning properly. Run the RACADM command "racadm getversion" to list all the servers and make sure the iDRAC version is displayed. If the iDRAC is listed as Not Ready then wait until iDRAC is ready for use. A Virtual Reseat may be required.

Message The Chassis Management Controller is unable to process inventory data from the server in slot arg1 .

Arguments arg1 = slot id

Detailed Description The Chassis Management Controller (CMC) is unable to process inventory data from the server slot identified in the message. This can happen if there is no free temporary storage in CMC.

Recommended Response Action Restart the Chassis Management Controller (CMC). To restart the CMC, start an SSH session to the CMC and enter the command "racadm racreset". Wait for the CMC to finish restarting and check if the inventory data is collected. If the issue persists, contact your service provider.

Message	Quick Deploy Profile: Unable to access remote network share and apply assigned profile to the server in slot arg1 .
Arguments	arg1 = slot number
Detailed Description	The remote network share settings are accessible on the CMC web interface at Server Overview/Setup/Remote Network Share tab. These settings must be correct for the CMC to connect to the remote network share and perform the application of the profile as specified in the Quick Deploy tab on the Profiles page.
Recommended Response Action	Make sure that the remote network share settings in the CMC are correct and that the remote share NFS/CIFS server is functioning correctly. Use the "Test Network" button in the CMC Web interface to make sure that the CMC can access the remote share.

SWC8627

Message Unable to configure the storage array in slot arg1 , because there is no communication between Chassis Management Controller (CMC) and the storage device.

Arguments arg1 = slot number

Detailed Description Unable to configure storage array. This could happen if CMC could not communicate with storage device.

Recommended Response Action 1) Reset iDRAC by using the graphical user interface (GUI): Click Chassis Overview > Troubleshooting > Reset Components. In the Reset Server section, from the Reset drop-down menu, select iDRAC Reset corresponding to the server iDRAC to be reset, and then click Apply Selection. Or, reset iDRAC by running the following command at the command line interface (CLI): racadm racreset -m server-n.2. Reset Chassis Management Controller (CMC) by using the GUI: Click Chassis Overview > Troubleshooting > Reset Components, and then click Reset/Failover CMC. Or, reset CMC by running the following command at the CLI: racadm racreset. For more information about the syntax and parameters used, see the iDRAC 8/7 v2.30.30.30 RACADM CLI Guide and the Chassis Management Controller Version 5.0 for Dell PowerEdge M1000e RACADM Command Line Reference Guide available on the support site.

Message The LOM firmware authentication operation is not started but skipped because a LOM firmware update or recovery job is either already scheduled or running.

Detailed Description The LOM firmware authentication operation is not started but skipped because a LOM firmware update or recovery job is either already scheduled or running.

Recommended Response

Action Wait for the recovery job to complete and retry the operation.

SYS072

Message Server Configuration Profile import operation timed-out.

Detailed Description

The import of Server Configuration Profile did not complete as the operation took too long.

Review the state of the host server and ensure there is no user input required that has disrupted the SCP workflow. There could be one or more reasons for server to halt at POST.1. The BIOS ErrPrompt setting being Enabled can require manual interaction during POST.2. The iDRAC ServerBoot.1#FirstBootDevice being set to BIOS will boot the system to the BIOS F2 menu requiring manual interaction.3. Review any error listed in POST and take appropriate action mentioned on the screen.If the host booted completed but the operation timed-out, then review the LCL before retrying the operation.

Message

Unable to apply changes that require system reboot because the Lifecycle Controller State setting is disabled in the Server Configuration Profile.

Detailed Description

The import of Server Configuration Profile operation completed with errors because the Lifecycle Controller State was disabled in the input profile. Configuration changes requiring a system reboot were not applied.

Recommended Response Action

Enable the Lifecycle Controller State setting and retry the operation.

Completed the preview of Server Configuration Profile import operation. Some changes specified in the configuration profile will not be successfully applied in an import operation.

Message

Detailed Description

The request to preview the Server Configuration Profile import operation completed. Some changes specified in the configuration profile will not be successfully applied in an import configuration profile operation.

Recommended Response Action

Identify the configuration changes that cannot be completed successfully by 1) Export the Lifecycle Log review the configuration results in the entries for the preview job or 2) Retrieve the preview operation configuration results using the GetConfigResults() method. Retry those changes that did not complete in a separate import operation.

SYS125

Message OS Collector: Unable to communicate with WMI services.

Detailed Description The OS Collector application is unable to communicate with the WMI service. This may be because the user context the application is running in does not have appropriate access privileges or firewall/security settings are preventing retrieving registry and software data from WMI.

Recommended Response Action: Do the following: 1) Make sure the user context the OS Collector application is running in has the appropriate privileges to access WMI. Make sure that firewall or security settings are set to allow access and retry the operation. 2) If the issue persists, restart the WMI service and retry the operation. 3) If the issue continues to persist, restart the server OS and retry the operation.

Message There was an issue retrieving Hardware data.

Detailed Description There was an issue retrieving Hardware data from the iDRAC internal storage. This may be because Collect System Inventory on Restart (CSIOR) feature is disabled and has never executed or the iDRAC Remote Services API status may not be in the Ready state.

Recommended Response Action Make sure the Collect System Inventory on Restart (CSIOR) is enabled and has run at least once before retrying this operation. For remote web services API access, make sure the GetRemoteServicesAPIStatus method returns Ready status before trying this operation. If the issue persists, reset iDRAC and retry the operation.

SYS403

Message Unable to complete the operation because the resource arg1 entered is not found.

Arguments arg1 = resource name

Detailed Description The operation cannot be successfully completed because the resource identified in the message does not exist.

Recommended Response Action Enter the correct resource and retry the operation. For resources with numeric ID in the URI, enable the "Redfish.1#NumericDynamicSegmentsEnable" attribute and retry the operation. For information about valid resource, see the Redfish Users Guide available on the support site.

Message: Unable to create the first OAuth2 instance using the POST operation on the ExternalAccountProviders Collection URI because no OAuth2 instance is configured.

Detailed Description: The first OAuth2 instance cannot be created by using a POST on the ExternalAccountProviders Collection URI because no OAuth2 instance is configured. As per the DMTF specification and schemas, the first OAuth2 instance can be configured only by performing a PATCH on the AccountService resource instance. After creating the first OAuth2 instance, you can create additional OAuth2 instances by performing a POST operation on the ExternalAccountProviders Collection Resource.

Recommended Response Action: Configure the first OAuth instance by performing a PATCH operation on the relevant properties of the OAuth2 property in the AccountService resource instance.

SYS8500

Message Delay Auto-throttle sent to arg1 server(s). arg2 arg3

Arguments arg1 = number of servers arg2 = error string arg3 = errors

Detailed Description The Chassis Management Controller (CMC) sent messages to delay power throttling to all capable servers in the chassis. This was done because the CMC firmware was updated or a failover was initiated. If specific server errors are shown in the message, verify that the iDRAC and Lifecycle Controller firmware versions on those servers is updated to the most current version available.

Recommended Response Action If no errors are shown, no response is required. If errors are listed in the message, navigate to the named servers and make sure that iDRAC and Lifecycle Controller firmware versions are the latest available.

Thermal Event Messages

THRM0001

Message: The server is currently ignoring the fan speed limit by enabling the Sound Cap thermal profile because of ambient temperature.

Detailed Description: The server is currently ignoring the fan speed limit by enabling the Sound Cap thermal profile because of the ambient temperature.

Recommended Response Action: Make sure that the server is operating within the recommended ambient temperature. After the ambient temperature reduces to the recommended value, the server will revert to the fan speed corresponding to the speed set by the Sound Cap thermal profile.

Category: Configuration (THRM = Thermal)

Severity: Warning

THRM0003

Message
The server is currently ignoring the fan speed limit that is set by enabling the Sound Cap thermal profile because of thermal cooling constraints.

Detailed Description
The server is currently ignoring the fan speed limit that is set by enabling the Sound Cap thermal profile because of thermal cooling constraints. The server is expected to reinstate the Sound Cap thermal profile based fan speed limit if the server power consumption and/or power management capabilities allows meeting system thermal requirement. PCIe adapters and storage drives are some sub-systems that do not have granular power controls and may limit overall server power reduction to meet server cooling requirements at the limited fan speed.

Recommended Response Action
No response action is required. However, if the situation persists, the system configuration and/or the operating environment is not favorable for this thermal profile. Consider disabling the Sound Cap thermal profile.

THRM0005

Message Sound Cap thermal profile is enabled.

Detailed Description Sound Cap thermal profile is enabled. This thermal profile limits the maximum fan speed (less than permitted full fan speed) to limit the acoustical noise level of the server. The server performance will be compromised to maintain stability with limited cooling available in this mode. The server may automatically ignore the fan speed limit that is set by Sound Cap thermal profile temporarily if the server cooling is at risk. However, some configurations may not be covered by this thermal profile. Make sure to monitor log messages to take appropriate actions where necessary and confirm that the server is not under thermal risk while operating in this mode. PCIe device cooling is an example of the most significant risk when operating in the Sound Cap thermal profile.

Recommended Response Action No response action is required.

THRM0019

Message The thermal state of the server is Critical. If configured to shut down, the Shutdown operation will be initiated in arg1 seconds.

Arguments arg1 = time

Detailed Description The system is in critical condition as a thermal critical state has occurred. If configured to shutdown (check iDRAC alert configuration settings), a system shutdown will be initiated.

Recommended Response Action A critical thermal condition has been reached. Please contact the technical support team.

TMP0120

Message The system inlet temperature is greater than the upper warning threshold.
 Detailed Description Ambient air temperature is too warm.

The maximum ambient temperature supported varies based on the server configuration. Do the following: See the event log data for information about fan failures. Verify the operating environment of the server by viewing the inlet temperatures of the chassis and sleds in the other slots, and also verify the site conditions to identify significant variations from the chassis temperature. Make sure that the iDRAC, BIOS and CPLD firmware versions are up-to-date. For configuration-specific guidance by adding chassis and sleds in the tool to model your server environment, visit the Enterprise Infrastructure Planning Tool page.

Message: The chassis inlet temperature is greater than the upper warning threshold temperature.

Detailed Description The chassis inlet temperature is higher than the upper warning threshold temperature. Ambient air temperature is too warm or one or more fans may have failed.

Recommended Response Action Review event log for fan failures. Maximum supported ambient temperature varies by configuration. Check system operating environment by assessing neighboring sleds and chassis inlet temperatures and site conditions for significant variations from chassis temperature. Verify that iDRAC and MM firmware are up-to-date.

TMP0142

Message The chassis inlet temperature is greater than the upper critical threshold temperature.

Detailed Description The chassis inlet temperature is higher than the upper critical threshold temperature.

Recommended Response Action Review event log for fan failures. Maximum supported ambient temperature varies by configuration. Check system operating environment by assessing neighboring sleds and chassis inlet temperatures and site conditions for significant variations from chassis temperature. Verify that iDRAC and MM firmware are up-to-date.

Consult EIPT published on www.dell.com/calc for configuration-specific guidance by adding chassis and sleds in the tool to model your situation.

TMP1000

Message	arg1 exceeded the maximum warning threshold.
Arguments	arg1 = tempsensor name
Detailed Description	The enclosure is too hot. A variety of factors can cause the excessive temperature. For example, a fan may have failed, the thermostat may be set too high, or the room temperature may be too hot. Check for factors that may cause overheating. For example, verify that the enclosure fan is working. You should check the thermostat settings and examine whether the enclosure is located near a heat source.
Recommended Response Action	Make sure the enclosure has enough ventilation and that the room temperature is not too hot. Refer to the enclosure documentation for more diagnostic information.

Message Unable to initialize iDRAC because of some critical issues.

iDRAC could not be initialized because of some critical issues. Continuing to boot may result in unexpected power loss because of unknown power inventory and unavailability of features such as remote out of band access, active power management, thermal management, inventory collection, LCD, or system error reporting.

Detailed Description Do one of the following: 1) Remove input power from the system, wait for 30 seconds, and re-apply input power. Turn on the system. 2) Update the iDRAC firmware. 3) Continue to boot. Note: This may result in unexpected power loss because of unknown power inventory and unavailability of features such as remote out of band access, active power management, thermal management, inventory collection, LCD, or system error reporting.

Recommended Response Action Remove input power from the system, wait for 30 seconds, and re-apply input power. Turn on the system.

UEFI0072

Message	Unable to load the firmware from arg1 because of the Secure Boot policy.
Arguments	arg1 = device name
Detailed Description	<p>When the Secure Boot feature is enabled, the system BIOS authenticates each UEFI driver against the Secure Boot policy. If a UEFI driver does not meet the policy criteria, the system BIOS does not load or execute the UEFI driver and displays this message at the end of POST. The Secure Boot policy consists of authorized and unauthorized X.509 certificates; signed drivers must chain to an authorized certificate. The policy may also authorize hash values of individual UEFI driver images. Users can configure the Secure Boot feature and the Secure Boot policy in F2 System Setup > System BIOS > Security Settings page.</p> <p>If the Secure Boot feature is not desired, disable it in System Setup > System BIOS > Security Settings page. Otherwise, do the following: 1) Make sure the firmware on the failing device is up-to-date. 2) If subsequent failures occur, review the Secure Boot Policy Summary in System Setup > System BIOS > Security Settings page. The device firmware must be authorized by a public key or hash value in the Authorized Signature Database. The public key or hash value must not be present in the Forbidden Signature Database.</p>

UEFI0073

Message Unable to boot arg1 because of the Secure Boot policy.

Arguments arg1 = Boot Option name

Detailed Description When the Secure Boot feature is enabled, the system BIOS authenticates each boot option against the Secure Boot policy. If a boot option does not meet the policy criteria, the system BIOS does not boot to the boot option and displays this message. The Secure Boot policy consists of authorized and unauthorized X.509 certificates; signed boot images must chain to an authorized certificate. The policy may also authorize hash values of individual boot images. Users can configure the Secure Boot feature and the Secure Boot policy in System Setup > System BIOS > Security Settings page.

If the Secure Boot feature is not desired, disable it in System Setup > System BIOS > Security Settings page. Otherwise, do the following: 1) review the Secure Boot Policy Summary in F2 System Setup > System BIOS > Security Settings page. The boot option must be authorized by a public key or hash value in the Authorized Signature Database. 2) If the boot option is not authorized but it can be trusted, enter System Setup > System BIOS > Security Settings page, set Secure Boot Policy to Custom, and add a entry for the boot option in the Authorized Signature Database (System Setup > System BIOS > Security Settings > Custom Policy Settings > Authorized Signature Database > Import Database Entry).

UEFI0074

Message The Secure Boot policy has been modified since the last time the system was started.

The system BIOS logs this message after detecting a change in Secure Boot policy settings. Such a change may result from user configuration or a system BIOS update. Changes to the following settings trigger this message: 1) Secure Boot (Enable/Disable) 2) Secure Boot Policy (Standard/Custom) 3) Platform Key 4) Key Exchange Keys 5) Authorized Signature Database (db) 6) Forbidden Signature Database (dbx).

Detailed Description

Recommended Response Action: Review the Secure Boot policy settings in System Setup > System BIOS > Security Settings. If the BIOS was recently updated, check whether the BIOS release notes mention changes to the Secure Boot policy. If policy changes were expected, no action is necessary. Otherwise, modify the Secure Boot policy settings as needed.

Message One or more PCI Parity errors (PERR) have occurred.

Detailed Description One or more PCI Parity errors (PERR) have occurred.

Recommended Response Action Check the System Event Log (SEL) to identify the PCI device that caused the PERR. Update the identified device firmware. If the issue persists, contact your service provider.

Message An error occurred during DDR memory channel initialization on memory slots: arg1 .

Arguments arg1 = slot numbers

Detailed Description An error occurred during DDR memory initialization during the Memory Buffer Receive Enable Training - Calculation phase.

Recommended Response Action Do the following: 1) Remove input power to the system, 2) Reseat the DIMM module and 3) Restart the system. If the issue persists, then replace the faulty memory module(s) identified in the message.

Arguments arg1 = number

Detailed Description Unable to perform iSCSI boot on the connection identified in the message because the initiator information from DHCPv6 server cannot be obtained.

Recommended Response Action Do one of the following: 1) Check the configuration of DHCPv6 server. 2) Go to System Setup > Network Settings > iSCSI Device Settings > Connection Settings page, disable DHCP and configure the initiator information manually. Retry the operation.

Message Unable to perform iSCSI boot on connection arg1 because the iSCSI target configuration data obtained from DHCPv6 server is invalid.

Arguments arg1 = number

Detailed Description Unable to perform iSCSI boot on the connection number identified in the message because the iSCSI target configuration data obtained from DHCPv6 server is invalid.

Recommended Response Action Do one of the following: 1) Reconfigure the DHCPv6 server boot file URL option, and note that server name must be specified. 2) Go to System Setup > Network Settings > iSCSI Device Settings > Connection Settings page, disable Target Info via DHCP and configure the parameters manually. Retry the operation.

UEFI0284

Message	Unable to import Secure Boot policy data because the format of the data is incompatible with the Secure Boot databases. The BIOS cannot accept the Secure Boot policy data from the management console because the format of the data is incompatible with the BIOS Secure Boot databases. Secure Boot policy data consists of a Platform Key (PK), Key Exchange Key (KEK) database, Authorized Signature Database (db), and Forbidden Signature Database (dbx). The contents of PK and KEK must follow the Distinguished Encoding Rules (DER) X.509 certificate format. Each entry in db and dbx must follow the DER X.509 certificate format or consist of a hash value generated by a Secure Hash Algorithm (SHA-256, SHA-384, or SHA-512).
Detailed Description	Make sure certificates follow the Distinguished Encoding Rules (DER) X.509 certificate format. Hash values in the Secure Boot policy must be 32 bytes, 48 bytes, or 64 bytes in size. Also make sure the data for the Platform Key (PK) and Key Exchange Key (KEK) database contain only certificates, not hash values. If the import operation includes multiple policy objects (certificates or hash values), determine the failing object by retrying the operation with one object at a time.

UEFI0285

Message
Unable to send Secure Boot policy data to iDRAC because of an issue in the iDRAC Shared Memory Architecture (SMA) Intelligent Platform Management Interface (IPMI).

Detailed Description
The BIOS cannot send Secure Boot policy data (certificates and hash values) to iDRAC because of an issue in the iDRAC Shared Memory Architecture (SMA) Intelligent Platform Management Interface (IPMI). This means management consoles will not display the latest Secure Boot policy data because BIOS is not synchronized with iDRAC. Synchronization must occur before using management consoles to configure Secure Boot policy data.

Recommended Response Action
Do one of the following: 1) Remove input power from the system, wait for 30 seconds, and re-apply input power. Turn on the system. 2) Update the iDRAC firmware on the system.

Message
The changes to Secure Boot policy objects are successfully saved by BIOS.

Detailed Description: A management console requested changes to Secure Boot policy objects, and the BIOS saved the changes successfully. Secure Boot policy objects consist of the Platform Key (PK), Key Exchange Key (KEK) database, Authorized Signature Database (db), and Forbidden Signature Database (dbx).

Recommended Response Action: No response action is required.

Message The iDRAC firmware is corrupted and unrecoverable.

Detailed Description The iDRAC U-Boot code detected that the iDRAC firmware version is corrupted and is unrecoverable.

Recommended Response Action 1) Turn off the server. 2) Disconnect the input power supply, wait for 30 seconds, and then reconnect the power. 3) Turn on the server. 4) If the issue persists, contact your service provider.

Message	The ratio of DDR memory capacity and NVDIMM capacity on the socket arg1 is not optimal to deliver the best performance.
Arguments	arg1 = socketName
Detailed Description	The ratio of DDR memory capacity and NVDIMM capacity on the socket identified in the message is not optimal to deliver the best performance.
Recommended Response Action	It is recommended that you reconfigure the ratio of DDR memory capacity to NVDIMM capacity to a value between 1:2 and 1:16. For more information about reconfiguring the DDR4 memory, see the platform Installation and Service Manual, available on the support site.

Message	Unable to detect the power loss in chassis because the communication between the server module and Chassis Management Module (CMM) is unavailable.
Detailed Description	The power loss in chassis cannot be detected because the communication between the server module and Chassis Management Module (CMM) is unavailable. The Persistent Memory feature cannot save data if an input power loss occurs.
Recommended Response Action	Make sure that there are two working Chassis Management Modules (CMMs) available. If only one CMM is present, perform a firmware update operation on it only when the server modules that have the Persistent Memory feature are turned off.

Message

Detailed Description The BMC is running in an unprotected mode. Do not allow unauthorized access to the BMC while in this mode.

Recommended Response Action Update the Baseboard Management Controller (BMC) firmware. For more information about updating the BMC firmware, see the BMC Users Guide available on the support site.

The value of memory capacity of all the installed DIMMs has exceeded the maximum value supported by the processor, all NVDIMMs capacity are capped under the maximum value.

Message

Detailed Description The value of memory capacity of all the installed DIMMs has exceeded the maximum value supported by the processor, all NVDIMMs capacity are capped under the maximum value.

Recommended Response Action: Reconfigure the processor to support the value of memory capacity of all the installed NVDIMMs. For more information about reconfiguring the processor, see the platform Installation and Service Manual available on the support site.

Message: An unsecure CPU with Platform Secure Boot disabled was detected.

Detailed Description: A CPU with Platform Secure Boot disabled is installed. Install a secure CPU in order to boot the system. To allow an unsecure CPU to possibly boot the system, go to System Setup > Processor Settings > CPU Test Mode, enable CPU Test Mode, then re-install the unsecure CPU.

Recommended Response Action To boot an unsecure CPU: install a secured CPU, go to System Setup > Processor Settings > CPU Test Mode, enable CPU Test Mode, and then re-install the unsecure CPU.

Message: System BIOS is unable to fulfill the DIMM map-out request because the request renders the system with no usable memory.

Detailed Description System BIOS is unable to fulfill the DIMM map-out request because the request renders the system with no usable memory. The server cannot function correctly without any usable system memory.

Recommended Response Action Verify the DIMM map-out configuration in system BIOS setup and make sure that at least one DIMM is physically present in the server and enabled. For information about DIMM installation, see the respective Installation and Service Manual of the server.

Message Unable to fully enumerate the Data Processing Unit (DPU) arg1 installed on the server because this DPU was not ready within the specified timeout period.

Arguments arg1 = DPU FQDD

Detailed Description The Data Processing Unit (DPU) identified in the message installed on the server cannot be fully enumerated because this DPU is not ready within the specified timeout period. If the Operating System (OS) of Data Processing Unit is not booted before the system BIOS PCIe enumeration, the system BIOS will not initialize the additional PCIe functions that would be enabled by the OS of Data Processing Unit.

Recommended Response Action Update the Operating System and firmware of the Data Processing Unit (DPU), and then restart the server. If the issue persists, contact your service provider. For information about updating DPU operating system, see the User Documentation supplied with the DPU or available on the support site.

Message	When TLS is enabled, insecure HTTP boot without TLS is not allowed.
Detailed Description	System BIOS is unable to boot via HTTP protocol (HTTP without TLS) because TLS mode is currently enabled. It is recommended to use HTTP boot over TLS for better security. To enable HTTP over TLS, 1) Set TLS Authentication Mode from None to desired mode in Network Settings > HTTP Device Settings > TLS Authentication Configuration 2) Import appropriate certificate in Root Certificate Configuration under same page. 3) HTTP boot URI should start with https:// and configure necessary network environment.
Recommended Response Action	Alternatively, change TLS Authentication Mode to None to disable TLS. However, please note that HTTP without TLS is not secure.

Virtual Disk Event Messages

VDR1

Message	arg1 failed.
Arguments	arg1 = VD Name
Detailed Description	A storage component such as a physical disk or an enclosure has failed. The failed component may have been identified by the controller while performing a task such as a rescan or a check consistency.
Recommended Response Action	Replace the failed component. You can identify which component has failed by locating the component that has a red "X" for its status. Perform a rescan after replacing the failed component.

Message: Hot Spare Protection policy deviation with severity set at Informational level occurred for arg1 .

Arguments: arg1 = virtual disk names

Detailed Description: The number of hot spares available for the virtual disks identified in the message are not compliant with Hot Spare Protection policy, whose severity is set at Informational level.

Recommended Response Action: Make appropriate assignments of hotspares to meet the policy.

Category: Storage (VDR = Virtual Disk)

VDR28

Message A virtual disk and its mirror have been split.

A user has caused a mirrored virtual disk to be split. When a virtual disk is mirrored, its data is copied to another virtual disk to maintain redundancy. After being split, both virtual disks retain a copy of the data. Because the mirror is no longer intact, updates to the data are no longer copied to the mirror.

VDR31

Message Controller cache is preserved for missing or offline arg1 .

Arguments arg1 = VD Name

Detailed Description The controller is getting disconnected from its virtual disk, while Input Output (IO) is in-progress.

Try importing foreign disks, if any. Check if the enclosure containing the Virtual Disk is disconnected from the controller. Insert any disks that are reported missing or failed. If the enclosure or disks were removed intentionally, the preserved cache can be discarded. See storage hardware documentation for more information on performing these steps.

VDR39

Message	The check consistency has made corrections and completed for arg1 .
Arguments	arg1 = VD name
Detailed Description	The virtual disk check consistency has identified issues and made corrections. For example, the check consistency may have encountered a bad disk block and remapped the disk block to restore data consistency. This alert is provided for informational purposes.
Recommended Response Action	No response action is required. As a precaution, monitor the Log for other errors related to this virtual disk. If problems persist, contact technical support.

VDR49

Message: arg1 is permanently degraded.

Arguments: arg1 = VD Name

Detailed Description: A redundant virtual disk has lost redundancy. This may occur when the virtual disk suffers the failure of more than one physical disk. In this case, both the source physical disk and the target disk with redundant data have failed. A rebuild is not possible because there is no longer redundancy.

Recommended Response Action: Replace the failed disks and restore from backup.

VDR50

Message	Background Initialization (BGI) completed with uncorrectable errors on arg1 .
Arguments	arg1 = virtual disk
Detailed Description	The background initialization task encountered errors that cannot be corrected. The virtual disk contains physical disks that have unusable disk space or disk errors that cannot be corrected.

Review other messages to identify whether the physical disk that has errors. If the virtual disk is redundant, you can replace the physical disk and continue using the virtual disk. If the virtual disk is non-redundant, you need to recreate the virtual disk after replacing the physical disk. After replacing the physical disk, run a consistency check to verify the data.

VDR56

Message	Redundancy of arg1 has degraded.
Arguments	arg1 = virtual disk
Detailed Description	This message occurs when a physical disk in the disk group was removed or when a physical disk included in a redundant virtual disk fails. Because the virtual disk is redundant (uses mirrored or parity information) and only one physical disk has failed, the virtual disk can be rebuilt. Typically, the virtual disk (E.g. RAID 6) has multiple redundant disks and there is a problem with one of them.
Recommended Response Action	Replace the missing or failed physical disk.

VDR58

Message	Bad block medium error is detected at block arg1 on arg2 .
Arguments	arg1 = args arg2 = VD Name
Detailed Description	Virtual disk bad blocks are due to presence of unrecoverable bad blocks on one or more member physical disks. Loss of data and/or redundancy may have occurred.
Recommended Response Action	Do the following and retry the operation: 1) Replace the RAID controller battery. For information about replacing the battery, see the hardware documentation of the respective RAID card. 2) If the issue persists, contact the Technical Support team.

VDR6

Message arg1 configuration has changed.
 Arguments arg1 = VD Name
 Detailed Description This alert is provided for informational purposes.

VDR7

Message	arg1 has failed.
Arguments	arg1 = virtual disk
Detailed Description	One or more physical disks included in the virtual disk have failed. If the virtual disk is non-redundant (does not use mirrored or parity data), then the failure of a single physical disk can cause the virtual disk to fail. If the virtual disk is redundant, then more physical disks have failed than you can rebuild using mirrored or parity information.
Recommended Response Action	Contact the Dell Technical Support for assistance about troubleshooting and resolution.

VDR8

Message	arg1 is degraded either because the physical disk drive in the drive group is removed or the physical disk drive added in a redundant virtual drive has failed.
Arguments	arg1 = virtual disk
Detailed Description	The virtual drive on the Controller identified in the message is degraded either because the physical disk drive in the drive group is removed or the physical disk drive added in a redundant virtual drive has failed. Do one of the following and retry the operation:1) If a drive was removed intentionally, reinstall the same drive or install an unused drive. 2) If physical drive has failed (see the physical drive error and the virtual drive degraded flag in the log data), then replace the drive in the same slot for the auto-rebuild operation to start.

VDR98

Message arg1 has switched active controllers. Its active path is now through arg2 .

Arguments arg1 = virtual disk arg2 = controller name

Detailed Description The virtual disk identified in the message has changed active paths. This can be because of an attempt to optimize the throughput of the system or it could be because of a controller failover.

Recommended Response Action No response action is required.

Category Storage (VDR = Virtual Disk)

VDR99

Message arg1 is unavailable because of an ID conflict in the fault-tolerant pair.

Arguments arg1 = virtual disk

Detailed Description The virtual disk identified in the message cannot be used because of an ID conflict with another virtual disk.

Recommended Response Action Power cycle the system chassis to restore the virtual disk. If this does not correct the problem then contact your service provider.

VLT0200

Message The system board arg1 voltage is less than the lower warning threshold.

Arguments arg1 = name

Detailed Description System hardware detected an over voltage or under voltage condition. If multiple voltage exceptions occur consecutively the system may power down in failsafe mode.

Recommended Response Action 1) Review system logs for power supply exceptions. 2) Reduce system to minimum configuration, inspect and re-install system cables. 3) If the problem persists, contact technical support. Refer to the product documentation to choose a convenient contact method.

Message	CPU arg1 arg2 voltage is less than the lower critical threshold.
Arguments	arg1 = number arg2 = name
Detailed Description	Low voltages may be the result of a problem with the voltage regulator or a problem with the processor. When the critical threshold is crossed, the processor will fail to operate. The system may power down.
Recommended Response Action	1) Turn system off and remove input power for one minute. Re-apply input power and turn system on. 2) Make sure the processor is seated correctly. 3) If the issue still persists, contact technical support. Refer to the product documentation to choose a convenient contact method.

VLT0304

Message CPU arg1 arg2 voltage is outside of range.
 Arguments arg1 = number arg2 = name

VLT400

Message	The arg1 sensor has failed with a value arg2 Volts.
Arguments	arg1 = sensor name arg2 = voltage
Detailed Description	<p>A voltage sensor identified in the message may have failed. This condition can cause system performance issues and degradation in the monitoring capability of the system.</p> <p>Do one of the following to resolve the issue: 1) Verify the Embedded System Management (ESM) Log for any sensor related faults. If there is a failed sensor, replace the system board. 2) Re-configure the system to a minimum configuration, and verify if the sensor displays a normal value, otherwise replace the system board. 3) If the sensor identified is a processor voltage sensor, remove the processor module and inspect processor socket, and replace if required. If the issue persists, contact your service provider.</p>
Recommended Response Action	
Category	System Health (VLT = Voltage)
Severity	Critical
OMSA Event ID	5150

	No alerts are applicable for this message

VLT401

Message	Unable to read arg1 sensor value.
Arguments	arg1 = sensor name
Detailed Description	<p>A voltage sensor identified in the message may have failed. This condition can cause system performance issues and degradation in the monitoring capability of the system.</p> <p>Do one of the following to resolve the issue: 1) Verify the Embedded System Management (ESM) Log for any sensor related faults. If there is a failed sensor, replace the system board. 2) Re-configure the system to a minimum configuration, and verify if the sensor displays a normal value, otherwise replace the system board. 3) If the sensor identified is a processor voltage sensor, remove the processor module and inspect processor socket, and replace if required. If the issue persists, contact your service provider.</p>

VLT403

Message	The arg1 sensor state has changed to a warning state with a value of arg2 Volts.
Arguments	arg1 = sensor name arg2 = voltage
Detailed Description	The voltage sensor identified in the message is faulty, or the voltage exceeds the preset warning threshold. This condition can cause system performance issues and degradation in the monitoring capability of the system. Do one of the following to resolve the issue: 1) Verify the Embedded System Management (ESM) Log for any sensor related faults. If there is a failed sensor, replace the system board. 2) Re-configure the system to a minimum configuration, and verify if the sensor displays a normal value, otherwise replace the system board. 3) If the sensor identified is a processor voltage sensor, remove the processor module and inspect processor socket, and replace if required. If the issue persists, contact your service provider.

VLT404

Message	The arg1 sensor detected an error with a value of arg2 Volts.
Arguments	arg1 = sensor name arg2 = voltage
Detailed Description	The voltage sensor identified in the message is faulty, or the voltage exceeds the preset critical threshold. This condition can cause system performance issues and degradation in the monitoring capability of the system.

Recommended Response Action	Do one of the following to resolve the issue: 1) Verify the Embedded System Management (ESM) Log for any sensor related faults. If there is a failed sensor, replace the system board. 2) Re-configure the system to a minimum configuration, and verify if the sensor displays a normal value, otherwise replace the system board. 3) If the sensor identified is a processor voltage sensor, remove the processor module and inspect processor socket, and replace if required. If the issue persists, contact your service provider.
