

Event and Error Message Reference Guide For Dell PowerEdge Servers Version 2.0

Notes, cautions, and warnings

NOTE: A **NOTE** indicates important information that helps you make better use of your computer.

CAUTION: A **CAUTION** indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

WARNING: A **WARNING** indicates a potential for property damage, personal injury, or death.

Amperage Event Messages

AMP0300

Message The system board arg1 current is less than the lower warning threshold.

Arguments arg1 = name

Detailed Description No detailed description available.

Recommended Response Action Review system power policy, check system logs for power related failures, and review system configuration changes.

Category System Health (AMP = Amperage)

Severity Warning

Trap/EventID 2178

AMP400

Message: The arg1 sensor has failed, and the last recorded value by the sensor was arg2 A.

Arguments: arg1 = sensor name arg2 = current

Detailed Description	The current sensor identified in the message has failed. This condition can cause system performance issues and degradation in the monitoring capability of the system.
Recommended Response Action	Check the Embedded System Management (ESM) Log for any sensor related faults. If there is a failed sensor, replace the system board. For more information, contact your service provider.
Category	System Health (AMP = Amperage)
Severity	Critical
OMSA Event ID	5200

AMP403

Message	The arg1 sensor state has changed to a warning state with a value of arg2 A.
Arguments	arg1 = sensor name arg2 = current
Detailed Description	The current sensor identified in the message is faulty or the current drawn by the system exceeds the warning threshold. This condition can cause system performance issues and degradation in the monitoring capability of the system.
Recommended Response Action	Verify the Embedded System Management (ESM) Log for any sensor related faults. If there is a failed sensor, replace the system board. For more information, contact your service provider. Otherwise, change the warning threshold for the current sensor such that it corresponds to the hardware configuration.

BAR033

Message: Unable to Restore Lifecycle Controller data.
 Detailed Description: A Lifecycle Controller internal data import operation did not complete successfully.

Do the following: 1) Download and apply the Dell Update Package for Lifecycle Controller/Unified Server Configurator (USC). 2) Run System Services to update the database if CSIOR is not enabled. 3) Reboot the system and retry the operation. If these response actions do not resolve the issue, download the Field Service Repair software and repair the Lifecycle Controller. Download and install all the DUPs for Lifecycle Controller/USC, diagnostics, driver packs, and device firmware of all the devices of the host system.

Message: System Reset or Lifecycle Controller Actions Canceled, System Profile Failure Recovery unsuccessful.

Detailed Description: The attempt to clean up after an unsuccessful Backup/Restore of a system profile operation has not been successful. The Lifecycle Controller/System Services related operations may not execute as expected until the system is properly restored to a functional configuration.

Recommended Response Action: Enter the iDRAC configuration utility. Select the System Services option in the main selection screen. Choose the Cancel Lifecycle Controller Actions / Cancel System Services operation and follow the directions to ensure this operation is performed. If Cancel Lifecycle Controller Actions / Cancel System Services is not available, remove power from the system, wait 1 minute and reapply power. If the issue persists, contact your technical service provider.

Message	Unable to Restore The Lifecycle Controller Configuration database.
Detailed Description	The system profile import of Lifecycle Controller configuration data has failed. If collect system inventory on reboot (CSIOR) is not enabled, enter and exit System Services in Lifecycle Controller (LC)/ Unified Server Configurator (USC) to update the database, reboot the system and try the operation again. If the error continues, use the field service repair software to repair the Lifecycle Controller. Download all Dell Update Packages for USC, Diagnostics Driver Packs, and device firmware for all host system devices, install all packages and retry the operation.

BAT1004

Message The battery on arg1 learn cycle has timed out.

Arguments arg1 = controller name

The controller battery must be fully charged before the learn cycle can begin. The battery may be unable to maintain a full charge causing the learn cycle to timeout. In addition, the battery must be able to maintain cached data for a specified period of time in the event of a power loss. For example, some batteries maintain cached data for 24 hours. If the battery is unable to maintain cached data for the required period of time, then the Learn cycle will timeout.

Detailed Description

Recommended Response Action Replace the battery pack. The battery is unable to maintain a full charge.

BAT1018

Message Battery on arg1 is degraded.

Arguments arg1 = Controller name

Detailed Description The temperature of the battery is high. This may be due to the battery being charged.

Recommended Response Action If the battery is being charged, then charging the battery should be stopped until the battery cools down and charging should be resumed. If this is not case, then some other condition exists and should be investigated.

BAT1033

Message The battery on arg1 was removed.

Arguments arg1 = controller name

Detailed Description The controller cannot communicate with the battery. Either the battery was removed, or the contact point between the controller and the battery is degraded.

Recommended Response Action Make sure that the battery is present and properly connected. If the battery is present, wait for a few minutes and re-check if the battery is detected. If the contact point between the battery and the controller is degraded, you must replace the battery, the controller, or both. Refer to the storage hardware documentation for information on how to safely access, or remove. Contact technical support if the issue persists.

CAPP1070

Message	Unable to save the SNMP settings.
---------	-----------------------------------

Detailed Description The SNMP settings could not be saved.

Recommended Response Action Retry the operation. If the issue persists, contact your system administrator.

Category Configuration (CAPP = Application)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

CAPP1071

Message Unable to update the SNMP settings because the entered destination address arg1 is invalid.

Arguments arg1 = address

Detailed Description The SNMP settings cannot be updated because the entered address identified in the message s invalid.

Recommended Response Action Enter a valid destination address and retry the operation.

Category Configuration (CAPP = Application)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

CAPP1072

Message Unable to update the SNMP settings because both SNMPv1/v2 and SNMPv3 credentials are present in the request.

Detailed Description The SNMP settings cannot be updated because both SNMPv1/v2 and SNMPv3 credentials are present in the request. Only 1 type of credential is allowed in a request.

Recommended Response Action Remove either the SNMPv1v2 credentials or the SNMPv3 credentials and retry the operation.

Category Configuration (CAPP = Application)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

CAPP1073

Message Unable to update the SNMP settings because no SNMP credentials are present in the request.

Detailed Description	The SNMP settings cannot be updated because no SNMP credentials are present in the request.
Recommended Response Action	Enter with SNMPv1/v2 credentials or SNMPv3 credentials and retry the operation.
Category	Configuration (CAPP = Application)
Severity	Critical
Redfish Event Type	
	No alerts are applicable for this message

CAPP1074

Message	Unable to update the SNMP settings because an invalid port number arg1 is entered.
Arguments	arg1 = port number
Detailed Description	The SNMP settings cannot be updated because an invalid port number is entered as identified in the message.
Recommended Response Action	Enter a port number between 10 and 65535 and retry the operation.
Category	Configuration (CAPP = Application)
Severity	Critical
Redfish Event Type	
	No alerts are applicable for this message

CAPP1075

Message	Unable to update the SNMP settings because the Community String is missing or empty.
Detailed Description	The SNMP settings cannot be updated because the Community String is missing or empty.
Recommended Response Action	Enter a Community String and retry the operation.
Category	Configuration (CAPP = Application)
Severity	Critical
Redfish Event Type	
	No alerts are applicable for this message

CAPP1076

Message	Unable to update the SNMP settings because the entered SNMP version does not exist.
---------	---

Detailed Description	Unable to update the SNMP settings because the entered SNMP version does not exist.
Recommended Response Action	Make sure the SNMP Version is set to SNMPV1 or SNMPV2 and retry the operation.
Category	Configuration (CAPP = Application)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

CAPP1077

Message	Unable to send Test Trap to IPV6 destination because IPV6 is not enabled in Network settings.
Detailed Description	The Test Trap cannot be send to ipv6 destination address because IPV6 is not enabled.
Recommended Response Action	Enable IPV6 inOpenManage Enterprise-Modular application and try to send Test Trap to IPV6 Destination.
Category	Configuration (CAPP = Application)
Severity	Critical
Redfish Event Type	
	No alerts are applicable for this message

CAPP1078

Message	Unable to Send the Test Trap because the Entered Destination Address is Invalid or Not Reachable.
Detailed Description	Test Traps cannot be sent to the Entered Destination address because the Address is invalid or not reachable.
Recommended Response Action	Enter a valid destination address and retry the operation.
Category	Configuration (CAPP = Application)
Severity	Critical
Redfish Event Type	
	No alerts are applicable for this message

CAPP1080

Message	Unable to save proxy information.
Detailed Description	The proxy information could not be saved.

Recommended Response Action Retry the operation. If the issue persists, contact your system administrator.

Category Configuration (CAPP = Application)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

CAPP1081

Message Unable to test the proxy information.

Detailed Description The proxy information cannot be tested.

Recommended Response Action Make sure that the proxy information is correct and retry the operation.

Message Unable to create or update the uplink because there is no valid network profile associated to the Native VLAN entered: arg1 .

Arguments arg1 = arg1

Detailed Description The uplink cannot be created or updated because there is no valid network profile associated to the native VLAN entered.

Recommended Response Action Please use one of the available network profiles in the system. If a network profile with the VLAN entered does not exist, please create a new one.

Setup Event Messages

CFWS6501

Message The data is successfully transferred.

Detailed Description The data is successfully transferred.

Recommended Response Action No response action is required.

Category Miscellaneous (CFWS = Setup)

Severity Informational

Redfish Event Type

No alerts are applicable for this message

CFWS6502

Message Unable to transfer data because arg1 .

Arguments arg1 = reason

Detailed Description The data cannot be transferred because of the issue identified in the message.

Recommended Response Action Retry the operation. If the issue persists, contact your system administrator.

Category Miscellaneous (CFWS = Setup)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

CFWS6503

Message The data transfer operation is in progress.

Detailed Description The data transfer operation is in progress.

Recommended Response Action No response action is required.

Category Miscellaneous (CFWS = Setup)

Severity Informational

Redfish Event Type

No alerts are applicable for this message

CFWS6505

Message Unable to perform the file transfer because network connection could not be established with Connectivity Services.

Detailed Description The operation cannot be performed because network connection could not be established with Dell Connectivity Services.

Recommended Response Action Retry the operation. If the issue persists, contact your system administrator.

Category Configuration (CFWS = Setup)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

CFWS6506

Message Unable to process the file transfer because of an error in communication to the Dell Connectivity Services: arg1 .

Arguments arg1 = scgErrorCode

Detailed Description The request cannot be processed because of an error in communication to the Dell Connectivity Services.

Recommended Response Action Retry the operation. If the issue persists, contact your system administrator.

Category Configuration (CFWS = Setup)

Severity Critical

Redfish Event
Type

No alerts are applicable for this message

CFWS6507

Message Unable to complete the operation because Forwarder id: arg1 is invalid.
Arguments arg1 = forwarderId
Detailed Description The request cannot be processed as the requested forwarder id is invalid.
Recommended Response Action Check the requested Forwarder Id. Refer to the OpenManage Enterprise Users Guide for more information about resource URI and its properties.
Category Configuration (CFWS = Setup)
Severity Critical
Redfish Event Type

No alerts are applicable for this message

CFWS6508

Message Unable to complete the operation because Forwarder id: arg1 is disabled.
Arguments arg1 = forwarderId
Detailed Description The request cannot be processed as the requested forwarder id is disabled.
Recommended Response Action Forwarder need to beEnabled to perform this operation.Refer to the OpenManage Enterprise Users Guide for more information about Enabling the Forwarder.
Category Configuration (CFWS = Setup)
Severity Critical
Redfish Event Type

No alerts are applicable for this message

CFWS6509

Message Unable to complete the request because Data sync History Id: arg1 is invalid.
Arguments arg1 = dataSyncHistoryId
Detailed Description The request cannot be processed as the requested Data sync History Id is invalid.
Recommended Response Action Retry the operation with valid Data Sync History Id. If the issue persists, contact your system administrator.
Category Configuration (CFWS = Setup)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

CFWS6510

Message Unable to complete the action because the values entered for Data Sync Configuration : arg1 is invalid.

Arguments arg1 = arg1

Detailed Description The request cannot be processed as the requested Data Sync Configuration is invalid.

Recommended Response Action Retry the operation with valid Data Sync Configurations. If the issue persists, contact your system administrator.

Category Configuration (CFWS = Setup)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

CFWS6511

Message Unable to complete the request because Data sync Configuration Id: arg1 is invalid.

Arguments arg1 = configId

Detailed Description The request cannot be processed as the requested Data sync Configuration Id is invalid.

Recommended Response Action Retry the operation with valid Data Sync Configuration Id. If the issue persists, contact your system administrator.

Category Configuration (CFWS = Setup)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

CFWS6512

Message Data transfer failed because services are busy. Next data transfer will contain the cumulative information.

Detailed Description Data transfer failed due to internal server error. Next scheduled data transfer will transfer the cumulative data.

Recommended Response Action No Action required.

Category Configuration (CFWS = Setup)

Severity Informational

Redfish Event
Type

No alerts are applicable for this message

CFWS6513

Message Unable to update the Forwarder configuration.

Detailed Description The Forwarder configuration cannot be updated because of an unknown internal issue.

Recommended Response Action Entervalid configuration data and retry the operation. If the issue persists,contact your system administrator.

Category Audit (CFWS = Setup)

Severity Informational

Redfish Event

No alerts are applicable for this message

CFWS6520

Message Unable to complete the action because the current on-demand sync request falls under threshold of arg1 min(s). Try again later.

Arguments arg1 = arg1

Detailed Description The request cannot be processed as the current on-demand sync request falls under threshold.

Recommended Response Action Retry the operation after required threshold. If the issue persists, contact your system administrator.

Category Configuration (CFWS = Setup)

Severity Warning

Redfish Event
Type

No alerts are applicable for this message

CFWS6521

Message Unable to complete the action because data transfer is in progress for arg1 and arg2 . Try again later.

Arguments arg1 = arg1 arg2 = arg2

Detailed Description The request cannot be processed as data transfer is in progress for the requested category.

Recommended Response Action Retry the operation after some time. If the issue persists, contact your system administrator.

Category Configuration (CFWS = Setup)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

CFWS6522

Message Unable to complete the action because transfer type Full is not supported for this category.

Detailed Description The request cannot be processed as transfer type Full is not supported for this category.

Recommended Response Action Retry the operation with valid transfer type for this category. If the issue persists, contact your system administrator.

Category Configuration (CFWS = Setup)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

CFWS6523

Message Unable to process the action because the values entered for On-Demand Sync : arg1 arg2 is invalid.

Arguments arg1 = dataType arg2 = dataValue

Detailed Description The request cannot be processed as the requestedOn-Demand Sync parameter is invalid.

Recommended Response Action Retry the operation with valid On-Demand Sync parameter. If the issue persists, contact your system administrator.

Category Configuration (CFWS = Setup)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

CFWS6524

Message On-Demand transfer of the file initiated successfully.

Detailed Description On-Demand transfer of the file initiated successfully.

Recommended Response Action No response action is required.

Generic Event Messages

CGEN1001

Message Unable to complete the operation because the user is not authenticated.

Detailed Description The operation cannot be completed because the user is not authenticated.

Recommended Response

Action Log in with valid credentials and retry the operation.

Category Configuration (CGEN = Generic)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

CGEN1002

Message Unable to complete the operation because the requested URI is invalid.

Detailed Description The operation cannot be completed because the requested URI is invalid.

Recommended Response

Action Enter a valid URI and retry the operation.

Category Configuration (CGEN = Generic)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

CGEN1003

Message Unable to complete the operation because an empty payload is not allowed for this request.

Detailed Description The operation cannot be completed because an empty payload is not allowed for this request.

Recommended Response

Action Enter a valid payload and retry the operation.

Category Configuration (CGEN = Generic)

Severity Critical

Redfish Event
Type

No alerts are applicable for this message

CGEN1005

Message Unable to complete the requested action because the logged in user is not authorized to perform this operation.

Detailed Description The operation cannot be completed because the logged in user is not authorized to perform this action.

Recommended Response Action Log in with a user that has the correct permissions for this action and retry the operation.

Category Configuration (CGEN = Generic)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

CGEN1006

Message Unable to complete the request because the resource URI does not exist or is not implemented.

Detailed Description The request cannot be completed because the resource URI does not exist or is not implemented.

Recommended Response Action Enter a valid URI and retry the operation.

Category Configuration (CGEN = Generic)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

CGEN1007

Message Unable to complete the requested action because the value for arg1 in the arg2 entity is invalid.

Arguments arg1 = property arg2 = entity

Detailed Description The operation cannot be completed because the property identified in the message is invalid.

Recommended Response Action Enter a valid value for the property identified in the message and retry the operation.

Category Configuration (CGEN = Generic)

Severity Critical

Redfish Event
Type

No alerts are applicable for this message

CGEN1008

Message Unable to process the request because an error occurred.
Detailed Description The operation cannot be completed because an error occurred.
Recommended Response Action Retry the operation. If the issue persists, contact your system administrator.
Category Configuration (CGEN = Generic)
Severity Critical
Redfish Event Type

No alerts are applicable for this message

CGEN1009

Message Unable to perform the requested action because the device management endpoint authentication over arg1 failed.
Arguments arg1 = protocol
Detailed Description The operation cannot be completed because the connection with the target device is not authenticated.
Recommended Response Action Make sure the credentials associated with the device management endpoint are valid and retry the operation.
Category Configuration (CGEN = Generic)
Severity Critical
Redfish Event Type

No alerts are applicable for this message

CGEN1010

Message Unable to perform the requested action because a connection timeout occurred with device management endpoint over arg1 .
Arguments arg1 = protocol
Detailed Description The operation cannot be completed because a device connection timeout occurred.
Recommended Response Action Make sure the device is available and retry the operation.
Category Configuration (CGEN = Generic)
Severity Informational

Redfish Event
Type

No alerts are applicable for this message

CGEN1011

Message Unable to perform the requested action because the service is unavailable over arg1 .

Arguments arg1 = protocol

Detailed Description The operation cannot be completed because the requested service is unavailable.

Recommended Response Action Make sure the requested service is available and retry the operation.

Category Configuration (CGEN = Generic)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

CGEN1013

Message Unable to connect to the device over arg1 because a connection error occurred.

Arguments arg1 = protocol

Detailed Description The operation cannot be completed because a connection error occurred while trying to connect to the device.

Recommended Response Action Make sure that the target device is available and retry the operation.

Category Configuration (CGEN = Generic)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

CGEN1014

Message Unable to complete the operation because an invalid value is entered for the property arg1 .

Arguments arg1 = payload error information

Detailed Description The operation cannot be completed because an invalid value is entered for the property identified in the message.

Recommended Response Action Enter a valid value for the property and retry the operation. For more information about valid values, see the OpenManage Enterprise-Modular Users Guide available on the support site.

Category Configuration (CGEN = Generic)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

CGEN1015

Message Unable to complete the operation because of an invalid property arg1 .

Arguments arg1 = property

Detailed Description The operation cannot be completed because an invalid property is entered in the payload.

Recommended Response Action Verify the identified property is valid in the message and retry the operation with valid payload.

Category Configuration (CGEN = Generic)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

CGEN1016

Message Unable to process the request because the value entered in the field Name supports only alphanumeric and space characters.

Detailed Description The request cannot be processed because the Name field supports only alphanumeric and space characters.

Recommended Response Action Make sure to enter a valid value for Name and then retry the operation. For information about supported characters, see the OpenManage Enterprise-Modular Users Guide.

Category Configuration (CGEN = Generic)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

CGEN1017

Message Unable to process the request because the value entered in the field Description supports only alphanumeric, space and period characters.

Detailed Description The request cannot be processed because the Description field supports only alphanumeric, space and period characters.

Recommended Response Action Make sure to enter a valid value for Description and then retry the operation. For information about supported characters, see the OpenManage Enterprise-Modular Users Guide.

Category Configuration (CGEN = Generic)

Severity Warning

Redfish Event
Type

Redfish Event Type	

No alerts are applicable for this message

CGEN9121

Message	The property arg1 is a required property and must be included in the request.
Arguments	arg1 = Name
Detailed Description	Indicates that a required property was not supplied as part of the request.
Recommended Response Action	Ensure that the property is in the request body and has a valid value and resubmit the request if the operation failed.
Category	Audit (CGEN = Generic)
Severity	Warning
Redfish Event Type	

No alerts are applicable for this message

CGEN9122

Message	The action arg1 requires the parameter arg2 to be present in the request body.
Arguments	arg1 = operation Name arg2 = resource Block Id
Detailed Description	Indicates that the action requested was missing a parameter that is required to process the action.
Recommended Response Action	Supply the action with the required parameter in the request body when the request is resubmitted.
Category	Audit (CGEN = Generic)
Severity	Critical
Redfish Event Type	

No alerts are applicable for this message

CGEN9123

Message	The action arg1 was submitted with with the invalid parameter arg2 .
Arguments	arg1 = Resource Block Id arg2 = Resource Block Value
Detailed Description	Indicates that an action was submitted but a parameter supplied did not match any of the known parameters.
Recommended Response Action	Correct the invalid parameter and resubmit the request if the operation failed.
Category	Audit (CGEN = Generic)
Severity	Warning
Redfish Event Type	

No alerts are applicable for this message

CGEN9724

Message	The property arg1 was duplicated in the request.
Arguments	arg1 = property Name
Detailed Description	Indicates that a duplicate property was included in the request body.
Recommended Response Action	Remove the duplicate property from the request body and resubmit the request if the operation failed.
Category	Audit (CGEN = Generic)
Severity	Warning
Redfish Event Type	

No alerts are applicable for this message

CGEN9725

Message	The property arg1 is not in the list of valid properties for the resource.
Arguments	arg1 = property name
Detailed Description	Indicates that an unknown property was included in the request body.
Recommended Response Action	Remove the unknown property from the request body and resubmit the request if the operation failed.
Category	Audit (CGEN = Generic)
Severity	Warning
Redfish Event Type	

No alerts are applicable for this message

CGEN9726

Message	The value arg1 for the property arg2 is of a different type than the property can accept.
Arguments	arg1 = value arg2 = name
Detailed Description	Indicates that a property was given the wrong value type, such as when a number is supplied for a property that requires a string.
Recommended Response Action	Correct the value for the property in the request body and resubmit the request if the operation failed.
Category	Audit (CGEN = Generic)
Severity	Warning
Redfish Event Type	

No alerts are applicable for this message

CGEN9727

Message	The value arg1 for the property arg2 is of a different format than the property can accept.
Arguments	arg1 = value arg2 = name
Detailed Description	Indicates that a property was given the correct value type but the value of that property was not supported. This includes value size/length exceeded.
Recommended Response Action	Correct the value for the property in the request body and resubmit the request if the operation failed.
Category	Audit (CGEN = Generic)
Severity	Warning
Redfish Event Type	

No alerts are applicable for this message

CGEN9728

Message	The value arg1 for the property arg2 is not in the list of acceptable values.
Arguments	arg1 = value arg2 = name
Detailed Description	Indicates that a property was given the correct value type but the value of that property was not supported. This values not in an enumeration.
Recommended Response Action	Choose a value from the enumeration list that the implementation can support and resubmit the request if the operation failed.
Category	Audit (CGEN = Generic)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

CGEN9729

Message The property arg1 is a read only property and cannot be assigned a value.

Arguments arg1 = name

Detailed Description Indicates that a property was given a value in the request body, but the property is a readonly property.

Recommended Response Action Remove the property from the request body and resubmit the request if the operation failed.

Category Audit (CGEN = Generic)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

CGEN9730

Message The request body submitted was malformed JSON and could not be parsed by the receiving service.

Detailed Description Indicates that the request body was malformed JSON. Could be duplicate, syntax error, etc.

Recommended Response Action Ensure that the request body is valid JSON and resubmit the request.

Category Audit (CGEN = Generic)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

CGEN9731

Message The action arg1 is not supported by the resource.

Arguments arg1 = action Name

Detailed Description Indicates that the action supplied with the POST operation is not supported by the resource.

Recommended Response Action The action supplied cannot be resubmitted to the implementation. Perhaps the action was invalid, the wrong resource was the target or the implementation documentation may be of assistance.

Category Audit (CGEN = Generic)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

CGEN9732

Message The action arg1 was submitted with more than one value for the parameter arg2 .

Arguments arg1 = action Name arg2 = parameter Value

Detailed Description Indicates that the action was supplied with a duplicated parameter in the request body.

Recommended Response Action Resubmit the action with only one instance of the parameter in the request body if the operation failed.

Category Audit (CGEN = Generic)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

CGEN9733

Message The value arg1 for the parameter arg2 in the action arg3 is of a different type than the parameter can accept.

Arguments arg1 = value arg2 = parameter arg3 = action

Detailed Description Indicates that a parameter was given the wrong value type, such as when a number is supplied for a parameter that requires a string.

Recommended Response Action Correct the value for the parameter in the request body and resubmit the request if the operation failed.

Category Audit (CGEN = Generic)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

CGEN9734

Message The value arg1 for the parameter arg2 in the action arg3 is of a different format than the parameter can accept.

Arguments arg1 = value arg2 = parameter arg3 = action

Detailed Description Indicates that a parameter was given the correct value type but the value of that parameter was not supported. This includes value size/length exceeded.

Recommended Response Action Correct the value for the parameter in the request body and resubmit the request if the operation failed.

Category Audit (CGEN = Generic)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

CGEN9735

Message The parameter arg1 for the action arg2 is not supported on the target resource.

Arguments arg1 = parameter arg2 = action

Detailed Description Indicates that the parameter supplied for the action is not supported on the resource.

Recommended Response Action Remove the parameter supplied and resubmit the request if the operation failed.

Category Audit (CGEN = Generic)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

CGEN9736

Message The value arg1 for the query parameter arg2 is of a different type than the parameter can accept.

Arguments arg1 = value arg2 = parameter

Detailed Description Indicates that a query parameter was given the wrong value type, such as when a number is supplied for a query parameter that requires a string.

Recommended Response Action Correct the value for the query parameter in the request and resubmit the request if the operation failed.

Category Audit (CGEN = Generic)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

CGEN9737

Message The value arg1 for the parameter arg2 is of a different format than the parameter can accept.

Arguments	arg1 = value arg2 = parameter
Detailed Description	Indicates that a query parameter was given the correct value type but the value of that parameter was not supported. This includes value size/length exceeded.
Recommended Response Action	Correct the value for the query parameter in the request and resubmit the request if the operation failed.
Category	Audit (CGEN = Generic)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

CGEN9738

Message	The value arg1 for the query parameter arg2 is out of range arg3 .
Arguments	arg1 = value arg2 = parameter arg3 = range
Detailed Description	Indicates that a query parameter was supplied that is out of range for the given resource. This can happen with values that are too low or beyond that possible for the supplied resource, such as when a page is requested that is beyond the last page.
Recommended Response Action	Reduce the value for the query parameter to a value that is within range, such as a start or count value that is within bounds of the number of resources in a collection or a page that is within the range of valid pages.
Category	Audit (CGEN = Generic)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

CGEN9739

Message	Querying is not supported on the requested resource.
Detailed Description	Indicates that query is not supported on the given resource, such as when a start/count query is attempted on a resource that is not a collection.
Recommended Response Action	Remove the query parameters and resubmit the request if the operation failed.
Category	Audit (CGEN = Generic)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

CGEN9740

Message	Querying is not supported by the implementation.
Detailed Description	Indicates that query is not supported on the implementation.
Recommended Response Action	Remove the query parameters and resubmit the request if the operation failed.
Category	Audit (CGEN = Generic)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

CGEN9741

Message	The session establishment failed due to the number of simultaneous sessions exceeding the limit of the implementation.
Detailed Description	Indicates that a session establishment has been requested but the operation failed due to the number of simultaneous sessions exceeding the limit of the implementation.
Recommended Response Action	Reduce the number of other sessions before trying to establish the session or increase the limit of simultaneous sessions (if supported).
Category	Audit (CGEN = Generic)
Severity	Critical
Redfish Event Type	
	No alerts are applicable for this message

CGEN9742

Message	The event subscription failed due to the number of simultaneous subscriptions exceeding the limit of the implementation.
Detailed Description	Indicates that a event subscription establishment has been requested but the operation failed due to the number of simultaneous connection exceeding the limit of the implementation.
Recommended Response Action	Reduce the number of other subscriptions before trying to establish the event subscription or increase the limit of simultaneous subscriptions (if supported).
Category	Audit (CGEN = Generic)
Severity	Critical
Redfish Event Type	
	No alerts are applicable for this message

CGEN9743

Message	The delete request failed because the resource requested cannot be deleted.
Detailed Description	Indicates that a delete operation was attempted on a resource that cannot be deleted.
Recommended Response Action	Do not attempt to delete a non-deletable resource.
Category	Audit (CGEN = Generic)
Severity	Critical
Redfish Event Type	

No alerts are applicable for this message

CGEN9744

Message	The change to the requested resource failed because the resource is in use or in transition.
Detailed Description	Indicates that a change was requested to a resource but the change was rejected due to the resource being in use or transition.
Recommended Response Action	Remove the condition and resubmit the request if the operation failed.
Category	Audit (CGEN = Generic)
Severity	Warning
Redfish Event Type	

No alerts are applicable for this message

CGEN9745

Message	The requested resource already exists.
Detailed Description	Indicates that a resource change or creation was attempted but that the operation cannot proceed because the resource already exists.
Recommended Response Action	Do not repeat the create operation as the resource has already been created.
Category	Audit (CGEN = Generic)
Severity	Critical
Redfish Event Type	

No alerts are applicable for this message

CGEN9747

Message	There is no valid session established with the implementation.
---------	--

Detailed Description	Indicates that the operation failed because a valid session is required in order to access any resources.
Recommended Response Action	Establish as session before attempting any operations.
Category	Audit (CGEN = Generic)
Severity	Critical
Redfish Event Type	
	No alerts are applicable for this message

CGEN9748

Message	There are insufficient privileges for the account or credentials associated with the current session to perform the requested operation.
Detailed Description	Indicates that the credentials associated with the established session do not have sufficient privileges for the requested operation.
Recommended Response Action	Either abandon the operation or change the associated access rights and resubmit the request if the operation failed.
Category	Audit (CGEN = Generic)
Severity	Critical
Redfish Event Type	
	No alerts are applicable for this message

CGEN9749

Message	The account was successfully modified.
Detailed Description	Indicates that the account was successfully modified.
Recommended Response Action	No resolution is required.
Category	Audit (CGEN = Generic)
Severity	Informational
Redfish Event Type	
	No alerts are applicable for this message

CGEN9750

Message	The account modification request failed.
Detailed Description	Indicates that the modification requested for the account was not successful.

Recommended Response Action The modification may have failed due to permission issues or issues with the request body.
Category Audit (CGEN = Generic)
Severity Warning
Redfish Event Type
No alerts are applicable for this message

CGEN9751

Message The account is successfully removed.
Detailed Description The account is successfully removed.
Recommended Response Action No response action is required.

No alerts are applicable for this message

CGEN9752

Message The account for the current session has been removed, thus the current session has been removed as well.
Detailed Description Indicates that the account for the session has been removed, thus the session has been removed as well.
Recommended Response Action Attempt to connect with a valid account.
Category Audit (CGEN = Generic)
Severity Informational
Redfish Event Type
No alerts are applicable for this message

CGEN9753

Message The object at arg1 is invalid.
Arguments arg1 = question
Detailed Description Indicates that the object in question is invalid according to the implementation. Examples include a firmware update malformed URI.

Recommended Response Action Either the object is malformed or the URI is not correct. Correct the condition and resubmit the request if it failed.

Category Audit (CGEN = Generic)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

CGEN9754

Message The service detected a malformed request body that it was unable to interpret.

Detailed Description Indicates that the service encountered an unrecognizable request body that could not even be interpreted as malformed JSON.

Recommended Response Action Correct the request body and resubmit the request if it failed.

Category Audit (CGEN = Generic)

Severity Warning

Redfish Event Type

No alerts are applicable for this message

CGEN9755

Message The resource at the URI arg1 was not found.

Arguments arg1 = resource

Detailed Description Indicates that the operation expected an image or other resource at the provided URI but none was found. Examples of this are in requests that require URIs like Firmware Update.

Recommended Response Action Place a valid resource at the URI or correct the URI and resubmit the request.

Category Audit (CGEN = Generic)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

CGEN9756

Message The resource at arg1 is in a format not recognized by the service.

Arguments arg1 = resource

Detailed Description Indicates that the URI was valid but the resource or image at that URI was in a format not supported by the service.

Recommended Response Action Place an image or resource or file that is recognized by the service at the URI.

Category Audit (CGEN = Generic)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

CGEN9757

Message The create operation failed because the resource has reached the limit of possible resources.

Detailed Description Indicates that no more resources can be created on the resource as it has reached its create limit.

Recommended Response Action Either delete resources and resubmit the request if the operation failed or do not resubmit the request.

Category Audit (CGEN = Generic)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

CGEN9758

Message The operation failed because the service is shutting down and can no longer take incoming requests.

Detailed Description Indicates that the operation failed as the service is shutting down, such as when the service reboots.

Recommended Response Action When the service becomes available, resubmit the request if the operation failed.

Category Audit (CGEN = Generic)

Severity Critical

Redfish Event Type

No alerts are applicable for this message

CGEN9759

Message The operation failed because the service is in an unknown state and can no longer take incoming requests.

Detailed Description Indicates that the operation failed because the service is in an unknown state and cannot accept additional requests.

Recommended Response Action Restart the service and resubmit the request if the operation failed.
Category Audit (CGEN = Generic)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

CGEN9760

Message While accessing the resource at arg1 , the service received an authorization error arg2 .
Arguments arg1 = uri arg2 = error
Detailed Description Indicates that the attempt to access the resource/file/image at the URI was unauthorized.
Recommended Response Action Ensure that the appropriate access is provided for the service in order for it to access the URI.
Category Audit (CGEN = Generic)
Severity Critical
Redfish Event Type
No alerts are applicable for this message

CGEN9761

Message The Resource Zone arg1 is updated on the service.
Arguments arg1 = zone 1
Detailed Description The Resource Zone identified in the message is updated. To view the updated information, refresh the cached version of the Resource Zone.
Recommended Response Action No response action is required.
Category Audit (CGEN = Generic)
Severity Warning
Redfish Event Type
No alerts are applicable for this message

CGEN9762

Message Unable to update the Resource Zone because of an internal issue.
Detailed Description The Resource Zone cannot be updated because of an internal issue.

Recommended Response Action Restart the service and resubmit the request if the operation failed. For more information about updating resource zones, see the OpenManage Enterprise-Modular Users Guide available on the support site.

Category Audit (CGEN = Generic)

Message The Extended Storage feature activation on the secondary CMC timed out. The feature is being returned to single CMC mode.

Detailed Description The Extended Storage feature activation on the secondary CMC timed out. If the media on Standby CMC does not respond within 90 seconds of confirming activation the feature returns to single CMC mode.

Recommended Response Action Do the following and retry the operation: 1) In the CMC Web interface, go to Chassis Controller > Flash Media > Configuration, and verify if the SD card on secondary CMC displays errors. 2) If errors are displayed, execute the following racadm command: "racadm cmchangeover". 3) Repair the removable flash media SD Card by selecting the Chassis Controller > Flash Media > Configuration > Repair Active Controller Media in the CMC Web interface. Repairing is only allowed on the SD card of the primary CMC. If the problem persists, replace the card.

CMC8514

Message Fabric mismatch is detected in the I/O Module arg1 .

Arguments arg1 = iom slot name

This error may occur due to any of the following conditions: 1) Invalid I/O Module and mezzanine card configuration, where a newly installed I/O Modules fabric type and the resident mezzanine cards fabric types do not match or are incompatible. 2) Invalid I/O Module and I/O Module configuration, where a newly installed I/O Module has a different or incompatible fabric type from an I/O Module already installed in the fabric.

Detailed Description

Recommended Response Action Refer to Chassis Management Controller Users Guide for additional information.

Message A double height server is detected in slot arg1 , however the server is not detected in the bottom slot.

Arguments arg1 = slot number

Detailed Description A double height server is detected in slot specified in the message, however the server is not detected in the bottom slot. This occurs if the server is not correctly inserted into the chassis.

Recommended Response Action Remove the server from the chassis, check for any broken or bent pins at the rear of the server. If there is no damage, reinsert the server into the chassis.

CMC8706

Message: The peripheral device in slot arg1 is in critical state.

Arguments: arg1 = slot number

Detailed Description: The peripheral device in slot identified in the message is in critical state.

Resolve the peripheral device hardware issues. For example: a) If the peripheral device tray is open, close the tray. b) If there is misconfiguration because of peripheral device insertion, reboot, or operation mode change, configure the peripheral device by referring to the Chassis Management Controller (CMC) Users Guide available on the support site.

Recommended Response Action

Category Audit (CMC = Management Module)

Severity Critical

Trap/EventID 8689

LCD Message Peripheral is critical.

CMC8707

Message Management hardware component is not detected in the Management Module in slot arg1 .

Arguments arg1 = slot number

Detailed Description The management hardware component has not been detected in the Management Module at the slot identified in the message.

Recommended Response Action If the problem persists for several minutes then do the following :
1)Physically reseal the Management Module. 2) Perform a Powercycle operation of the Management Module.

Category System Health (CMC = Management Module)

Severity Critical

LCD Message Management service is critical for the Management Module.

Redfish Event Type Alert

No alerts are applicable for this message

CMC8708

Message The Management Module at slot arg1 has detected thermal issues.

Arguments arg1 = slot number

Detailed Description The Management Module at slot identified in the message has detected thermal issues.

Recommended Response Action	If the problem persists for several minutes then do the following: 1) Powercycle the Management Module. 2) Review the Hardware Log and check if there are fans that are not functioning properly. 3) Replace the fans that are not functioning properly. 4) If all the fans are functioning, check the chassis temperature by using RACADM. When the fans are functioning properly and the chassis temperature is too high, the ambient air temperature is too high or the air inlets are not receiving sufficient air.
Category	System Health (CMC = Management Module)
Severity	Critical
LCD Message	Management service is critical for the Management Module.
Redfish Event Type	Alert
	No alerts are applicable for this message

CMC8709

Message	Management service is initializing on the Management Module at slot arg1 .
Arguments	arg1 = slot number
Detailed Description	Management service is initializing in the Management Module at slot identified in the message.
Recommended Response Action	If the problem persists for several minutes then reset the Management Module on slot identified in the message.
Category	System Health (CMC = Management Module)
Severity	Warning
LCD Message	Management service is critical for the Management Module.
Redfish Event Type	Alert
	No alerts are applicable for this message

CMC8710

Message	Power loss detected on the Management Module at slot arg1 due to reboot or shutdown.
Arguments	arg1 = slot number
Detailed Description	Management service has shutdown or rebooted on the Management Module at slot identified in the message.
Recommended Response Action	If the problem persists for several minutes then perform a Powercycle operation of the Management Module on slot identified in the message.
Category	System Health (CMC = Management Module)
Severity	Warning
LCD Message	Management service is critical for the Management Module.

Redfish Event Type Alert
No alerts are applicable for this message

CMC8711

Message Hard drive not detected in the Management Module at slot arg1 .
Arguments arg1 = slot number
Detailed Description The Management Module at slot identified in the message has not detected one of the hard drives.
Recommended Response Action If the problem persists for several minutes then do the following :
1)Physically reseal the Management Module. 2) Perform a Powercycle operation of the Management Module.
Category System Health (CMC = Management Module)
Severity Critical
LCD Message Management service is critical for the Management Module.
Redfish Event Type Alert
No alerts are applicable for this message

CMC8712

Message Internal Error (IErr) has occurred in the Management Module at slot arg1 .
Arguments arg1 = slot number
Detailed Description Management services are affected on the Management Module at slot identified in the message because of Internal Error (IErr).
Recommended Response Action If the problem persists for several minutes then do the following :
1)Physically reseal the Management Module. 2) Perform a Powercycle operation of the Management Module.
Category System Health (CMC = Management Module)
Severity Critical
LCD Message Management service is critical for the Management Module.
Redfish Event Type Alert
No alerts are applicable for this message

CMC8713

Message The Chassis Management Controller (CMC) cannot currently accept the configuration change operations because the chassis configuration usage is high.
Detailed Description The Chassis Management Controller (CMC) cannot currently accept the request for changing configuration because the chassis configuration usage is high.

Recommended Response Action: Some configuration attributes such as SSH PK authentication consume more memory space. Delete the unused SSH PK authentication keys and retry the operation. For information about CMC usage specification, see the Chassis Management Controller (CMC) Users Guide available at the support site.

Category: Configuration (CMC = Management Module)

Severity: Critical

CPU0700

Message CPU arg1 initialization error detected.

Arguments arg1 = number

Detailed Description System BIOS was unable to boot the processor.

Recommended Response Action 1) Turn system off and remove input power for one minute. Re-apply input power and turn system on. 2) Make sure the processor is seated correctly. 3) If the issue still persists, contact technical support. Refer to the product documentation to choose a convenient contact method.

CPWR0105

Message	Unable to clear the Power Distribution Unit (PDU) outlet arg1 because the PDU outlet is not assigned to any device.
Arguments	arg1 = outletNum
Detailed Description	The outlet identified in the message cannot be cleared because the Power Distribution Unit (PDU) outlet is not assigned to any device.
Recommended Response Action	Enter a valid occupied Power Distribution Unit (PDU) outlet and retry the operation.
Category	Configuration (CPWR = Power Configuration)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

CPWR0106

Message	Unable to assign the Power Distribution Unit (PDU) arg1 to the rack because the PDU can be assigned to only one rack at any given time.
Arguments	arg1 = deviceID

Detailed Description	The Power Distribution Unit (PDU) device ID identified in the message cannot be assigned to rack because the PDU can be assigned to only one rack at any given time.
Recommended Response Action	Enter a valid unassigned Power Distribution Unit (PDU) device ID and retry the operation.
Category	Configuration (CPWR = Power Configuration)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

CPWR0107

Message	Unable to associate the Power Distribution Unit (PDU) arg1 to the rack because the PDU cannot be placed in the rack slot.
Arguments	arg1 = deviceID
Detailed Description	The Power Distribution Unit (PDU) cannot associated to the rack because the PDU cannot be placed in the rack slot.
Recommended Response Action	Enter a valid value(zero or null) for the rack slot and retry the operation.
Category	Configuration (CPWR = Power Configuration)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

CPWR0108

Message	Unable to assign Power Distribution Unit (PDU) arg1 to rack because PDU is already associated with given rack.
Arguments	arg1 = deviceID
Detailed Description	The Power Distribution Unit (PDU) device identified in the message cannot be associated to rack because the PDU is already associated to rack.
Recommended Response Action	Enter a valid free (Unassociated) Power Distribution Unit (PDU) device ID and retry the operation.
Category	Configuration (CPWR = Power Configuration)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

CPWR0109

Message	Unable to retrieve Power Distribution Unit (PDU) outlet assignment details because the PDU with given ID does not exist.
Detailed Description	The Power Distribution Unit (PDU) outlet assignment details cannot be retrieved because the PDU with the given ID does not exist.
Recommended Response Action	Enter a valid existing Power Distribution Unit (PDU) device ID and retry the operation.
Category	Configuration (CPWR = Power Configuration)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

CPWR0110

Message	Unable to update details of the device arg1 because device PSU count is lesser than the total Power Distribution Unit (PDU) outlet assigned to it.
Arguments	arg1 = deviceID
Detailed Description	The operation cannot be completed because the device identified in the message has more Power Distribution Unit (PDU) outlet assignment than the PSU count.
Recommended Response Action	Make sure that PSU count of the device is same or more than the total Power Distribution Unit (PDU) outlet assigned to it.
Category	Configuration (CPWR = Power Configuration)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

CPWR0111

Message	Unable to move the device arg1 to other rack because device is assigned to Power Distribution Unit (PDU) outlet.
Arguments	arg1 = deviceID
Detailed Description	The operation cannot be completed because device identified in the message is assigned to Power Distribution Unit (PDU) outlet.
Recommended Response Action	Clear the outlet assignments of the device identified in the message and retry the operation.
Category	Configuration (CPWR = Power Configuration)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

CPWR0112

Message	Unable to update details of the device arg1 because device PSU count cannot be more than 8.
Arguments	arg1 = deviceID
Detailed Description	Data of the device identified in the message cannot be updated because the device PSU count is more than the recommended threshold value of 1-8.
Recommended Response Action	Make sure that the device PSU count is between 1 to 8 and retry the operation.
Category	Configuration (CPWR = Power Configuration)

Message	Unable to unlock secure foreign locked drives because already unlocked drives are detected that are neither imported nor deleted.
Detailed Description	The secure foreign locked drives cannot be unlocked because already unlocked drives are detected which have secure locked configuration that are neither imported nor erased.
Recommended Response Action	The unlock command should be followed by an import config command to import a secure foreign locked configuration or by a cryptographic erase command. If the unlocked drives are not imported or erased, then further unlock operations on locked drives will be blocked. To import already unlocked drives on a controller, run the RACADM command at the command line interface (CLI): "racadm raid importconfig:" where is the FQDD identifier of the target controller. In order to erase the data on the unlocked drive, run the command: "racadm raid cryptographicerase:" where is the FQDD identifier of the target drive.

Message	iDRAC is unable to successfully communicate with the device arg1 , because of one or more of the following reasons: device is incorrectly seated, iDRAC firmware error, device is in a shutdown state or device firmware error.
Arguments	arg1 = deviceName
Detailed Description	iDRAC is unable to successfully communicate with the device identified in the message. This issue could have happened because of one or more of the following reasons: device is incorrectly seated, device firmware error, device is in a shutdown state or iDRAC firmware error. Ensure that the following are correct, and then retry the operation by running the following command at the Command Line Interface (CLI): racadm racreset. 1) The device is correctly operating in the host operating system. 2) The device and iDRAC firmware versions are latest. Also ensure that the device is properly installed and cabled. If the issue persists, contact your service provider.

Message Redundant path disconnected on arg1 .

Arguments arg1 = Controller Name

Detailed Description The controller identified in the message has two connectors that are connected to the same enclosure. The communication path on one connector has lost connection with the enclosure. The communication path on the other connector is reporting this loss.

Recommended Response Action Make sure both the cables are securely attached to the enclosure and controller. For more information about connecting the cables to the enclosure, see the Cables Attached Correctly section in the PERC Users Guide. Also, make sure both Enclosure Management Modules (EMMs) are healthy.

CTL40

Message	A multi-bit Error Correction Code (ECC) error is detected on the arg1 .
Arguments	arg1 = controllerName
Detailed Description	An error involving multiple bits is detected during the Read or Write operation. The error correction algorithm recalculates parity data during read/write operations. If the issue involves a single bit, the algorithm will correct and maintain parity data. In case of multiple bits, the data may be lost. However, in some multi-bit error cases, if issue occurs during Read operation, the data on the drive may be retained. However the data is lost during a Write operation.
Recommended Response Action	Replace the controller. For information about replacing the controller, see the respective PERC Users Guide available on the support site.

CTL47

Message A single-bit Error Correction Code (ECC) error is detected on the arg1 .

Arguments arg1 = controllerName

Detailed Description A component or subsystem on the controller is operating in a degraded state. The message may be an indicator of a future controller failure.

Recommended Response Action The controller recovered from a correctable error. If this message is displayed multiple times, it indicates that the controller may need replacement in the future.

CTL48

Message A foreign configuration was detected on arg1 .

Arguments arg1 = controller name

The controller has physical disks that were moved from another controller or have been removed and replaced on the current configuration. These physical disks contain virtual disks that were created on the current or other controller. See the storage hardware documentation for Import Foreign Configuration and Clear Foreign Configuration for more information. Foreign configuration is seen when a controller is replaced.

Detailed Description

Recommended Response Action: Import or clear the detected foreign configuration using a configuration tool or utility.

CTL49

Message: The NVRAM has corrupted data on arg1 .

Arguments: arg1 = Controller name

Detailed Description: The NVRAM has corrupted data. This may occur after a power surge, a battery failure, or for other reasons. The controller is reinitializing the NVRAM.

Recommended Response Action: No response action is required as the controller is taking the required corrective action. However, if this message is generated often (such as during each reboot), then replace the controller.

CTL51

Message arg1 SAS port report: arg2
 Arguments arg1 = Controller name arg2 = message
 Detailed Description The controller detected an issue because of incorrectly connecting the SAS cables to the enclosure or backplane.
 Recommended Response Action Make sure that the SAS cables are firmly attached to the enclosure or backplane. For information about using SAS cables, see the respective PowerEdge server Installation and Service Manual available on the support site.

Message arg1 is operating at less than optimal bandwidth.

Arguments arg1 = controller name

Detailed Description The controller identified in the message experienced a PCIe training error and is operating at less than full bandwidth. Until this issue is resolved, a reduction in the storage performance is expected.

Recommended Response Action Perform a Powercycle operation on the Chassis. If the issue persists, contact your service provider.

HD_RDB Event Messages

DDHDR002

Message Historical metadata database backup failed.

Detailed Description If the primary historical metadata database fails without a recent backup present, some or all of the historical data can be lost when the primary historical database is restored from its backup and log files. Data in the historical metadata database is used for some system reports, but it is not required for proper system functioning.

Recommended Response
Action Contact your contracted support provider or visit us online at <https://www.dell.com/support> to help debug the problem.

Category System maintenance (DDHDR = HD_RDB)

Severity Warning

Redfish Event
Type

No alerts are applicable for this message

DDHDR003

Message Historical metadata database upgrade failed.

Detailed Description Saving of new historical metadata fields will be disabled, which may result in some UI reports being incomplete or unavailable. However, this change is not expected to impact the system otherwise.

Recommended Response
Action Contact your contracted support provider or visit us online at <https://www.dell.com/support> to help debug the problem and upgrade the historical metadata database.

Category System maintenance (DDHDR = HD_RDB)
Severity Critical
Redfish Event Type

No alerts are applicable for this message

DDHDR004

Message Historical metadata database pruning failed.
Detailed Description Pruning ensures the historical database does not consume more than its allocated disk space.
Recommended Response Action Contact your contracted support provider or visit us online at <https://www.dell.com/support> to help debug the problem.

Category System maintenance (DDHDR = HD_RDB)
Severity Warning
Redfish Event Type

No alerts are applicable for this message

DDHDR005

Message All existing historical metadata has been lost, and the system is running without a historical database.

Data in the historical database is used for some system reports, but it is not required for proper system functioning. If the recovery process fails to create a new primary historical database from the shelf database files during head swap processing, or if the database has become corrupted, this failure will occur. Currently, the system is operating without a historical database due to the failed attempt to create a new one.

Detailed Description

Recommended Response Action Contact your contracted support provider or visit us online at <https://www.dell.com/support> to debug this problem and possibly attempt recovery of the lost historical data.

Category System maintenance (DDHDR = HD_RDB)
Severity Warning
Redfish Event Type

No alerts are applicable for this message

ENC100

Message	arg1 is sending inconsistent responses to the controller.
Arguments	arg1 = enclosure name
Detailed Description	The storage controller is not receiving a consistent response from the enclosure due to a firmware problem or an incorrect cabling configuration. If the cables are longer than the specified maximum length, the signals may be degraded. Turn off all the enclosures attached to the system, check if the cable configurations are correct and reboot the system. If the problem persists, update the enclosure firmware to the latest supported version.
Recommended Response Action	Download the latest supported version of the firmware from the service provider. For more information about cable configuration, see storage enclosure documentation.

ENC19

Message arg1 has failed.

Arguments arg1 = Enclosure Management Module Name

Detailed Description An Enclosure Management Module (EMM) has failed. The failure may be caused by a loss of power to the EMM. The EMM self-test may also have identified a failure. There may also be a firmware problem or a multi-bit error.

Recommended Response Action Reset the Enclosure Management Module (EMM). See the storage hardware documentation for information on replacing the EMM. Replace the EMM. Contact technical support if the issue persists.

Message	The redundant multipath connection to the enclosure arg1 is abruptly disconnected because either the EMM is removed, cable is damaged, the cable is removed, a SAS IO Module is powered off, is damaged or is removed.
Arguments	arg1 = enclosure Name
Detailed Description	The redundant multipath connection to the enclosure identified in the message abruptly disconnected because either the EMM is removed, cable is damaged, the cable is removed, a SAS IOM module is powered off, is damaged or is removed.
Recommended Response Action	Do one of the following: 1) Make sure that the cables are properly connected to the Controller. 2) If the Enclosure Management Module (EMM) is removed, reinsert the EMM. 3) Check the status of both SAS IO modules (IOM). If a SAS IO module is removed, reinsert the SAS IOM.

ENC5

Message Redundancy on arg1 is degraded

Arguments arg1 = Enclosure Name

Detailed Description One or more of the enclosure components has failed. For example, a fan or power supply may have failed. Although the enclosure is currently operational, the failure of additional components could cause the enclosure to fail.

Recommended Response Action Identify and replace the failed component. To identify the failed component, select the enclosure in the tree view and click the Health subtab. Any failed component will be identified with a red X on the enclosures Health subtab. Alternatively, you can select the Storage object and click the Health subtab. The controller status displayed on the Health subtab indicates whether a controller has a failed or degraded component. See the enclosure documentation for information on replacing enclosure components and for other diagnostic information.

ENC6

Message Communication timeout on arg1 .

Arguments arg1 = Enclosure Name

Detailed Description The controller is unable to communicate with an enclosure. There are several reasons for communication loss. For example, there may be a bad or loose cable. An unusual amount of I/O may also interrupt communication with the enclosure. In addition, communication loss may be caused by software, hardware, or firmware problems, bad or failed power supplies, and enclosure shutdown.

Recommended Response Action Check for problems with the cables. See the Cables attached correctly section for more information on checking the cables. You should also check to see if the enclosure has degraded or failed components. To do this, select the enclosure object in the tree view and click the Health subtab. The Health subtab displays the status of the enclosure components. Verify that the controller has the supported driver and firmware versions installed and that each Enclosure Management Modules (EMMs) are running the same version of supported firmware.

EPP010

Message	Unable to use the Extended Power Performance (EPP) feature because the power supply unit (PSU) slot - arg1 is empty.
Arguments	arg1 = slot number
Detailed Description	The Extended Power Performance cannot be used because the power supply unit (PSU) slot identified in the message is empty.
Recommended Response Action	Install an EPP-capable PSU in the empty slot, and then retry to enable the EPP feature.
Category	System Health (EPP = Extended Power Performance)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

EPP011

Message	Unable to use the Extended Power Performance (EPP) feature because the power supply unit (PSU) slot - arg1 has no input power.
Arguments	arg1 = slot number

Detailed Description	The Extended Power Performance cannot be used because the power supply unit (PSU) slot identified in the message has no power supply.
Recommended Response Action	Make sure that the PSU in the PSU slot has input power, and then retry to enable the EPP feature.
Category	System Health (EPP = Extended Power Performance)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

EPP012

Message	Unable to use the Extended Power Performance (EPP) feature because the power supply unit (PSU) slot - arg1 has no output power.
Arguments	arg1 = slot number
Detailed Description	The Extended Power Performance cannot be used because the power supply unit (PSU) slot identified in the message has no output power. Make sure that the PSU in the PSU slot has no issue in the output power, and then retry to enable the EPP feature. To check the health status of the PSU identified in the message using the RACADM CLI utility, enter the following command: "racadm getpbinfo". If the PSU identified in the message is showing no output power, contact your service provider.
Recommended Response Action	
Category	System Health (EPP = Extended Power Performance)
Severity	Warning
Redfish Event Type	
	No alerts are applicable for this message

EPP013

Message	Unable to use the Extended Power Performance (EPP) feature because the power rating of power supply unit (PSU) slot - arg1 is less than 3000W.
Arguments	arg1 = slot number
Detailed Description	The Extended Power Performance cannot be used because the power rating of PSU identified in the slot is less than 3000W.
Recommended Response Action	Make sure that there are at least six PSUs in the chassis and each PSU must be of 3000W capacity, and then retry to enable the EPP feature.

FAN0001

Message Fan arg1 RPM is less than the lower critical threshold.
 Arguments arg1 = number
 Detailed Description
 The fan is not performing optimally. The fan may be installed improperly or may be failing. Fan speeds may have increased to protect the system.
 To resolve any temporary issues in communicating with the fans, restart iDRAC. If the issue persists, do the following: 1) Open the chassis cover and check for any cable interference in the fan blades. 2) Remove the fan (as identified in the iDRAC log) from the server, and then reinstall in the same slot. 3) Make sure the fan is removed from its connector on the motherboard. 4) Swap the fan with another fan from a different location in the same server. 5) If the issue persists, replace the fan with a new fan. 6) If the issue persists after installing the new fan in the slot, contact your technical support team and provide complete information about the tasks you performed to resolve this issue. Note: Dell Technologies recommends that you always upgrade your iDRAC and BIOS to the latest versions to get optimized performance on your servers.

FAN0202

Message	arg1 fan arg2 requires attention for optimal performance.
Arguments	arg1 = location arg2 = index
Detailed Description	A device in the chassis requires a fan type that does not match the configuration of the fan identified in the message. Some devices may experience varied performance and possible thermal errors depending on the configuration, workload, and environment.

Replace the fan with a Gold Grade (Hardware Version 2) fan during the next scheduled service. Dell recommends as soon as possible for optimal performance. For more information about recommended fan configurations, see the MX7000 Users Guide available on the support site.

FLDC1021

Message The journal mirror entry with WWN = arg1 is not accessible.

Arguments arg1 = World Wide Name

Detailed Description The device identified in the message having the journal mirror entry with given WWN (World Wide Name) is not accessible. A portion of an SSD is used for journal content. To assure consistency, the journal content is written into two other SSDs. These copies are journal mirrors. If the journal content cannot be written to any of the journal mirrors, then this event is signaled. It is a warning because the FLDC code will then attempt to choose another SSD to be a journal mirror.

Recommended Response Action No response action is required.

FSD9031

Message: Unable to authorize the debug operation for arg1 that was authorized by the following BMC user: BMC user name: arg2 , Employee arg3 at arg4 , for the period started at arg5 and ended at arg6 .

Arguments: arg1 = debugCaps arg2 = userName arg3 = employeeName arg4 = unblockTime arg5 = startTime arg6 = endTime

Detailed Description: The debug operation cannot be authorized for the user identified in the message. For OpenBMC, a Redfish Debug command could not be run. If the Redfish Debug command was run under the direction of Dell tech support then further assistance from tech support should be requested.

Recommended Response Action: For OpenBMC verify all of the following: 1) Ensure that the unblock, grant, and invoke commands are all run against the same BMC. 2) Ensure that the dat.ini file has not been changed in any manner. 3) Ensure that the current date is between the start and end dates. Note that Dell can further restrict both the set of debugCaps that are authorized and the start and stop times. If an authorized person did not enter a Redfish Debug command then an attacker may have entered the command.

Message arg1 is unable to join the iDRAC local group arg2 either because the Group passcode is incorrect, group already has the max allowed iDRACs, iDRAC already part of another group, group name does not exist, or issues in network connection.

Arguments arg1 = Service Tag arg2 = group name

Detailed Description The Service Tag identified in the message could not join the iDRAC local group identified in the message either because the Group passcode entered is incorrect, Group passcode is temporarily locked out, local group already has the max allowed iDRACs, or issues in network connection.

Recommended Response Action Do any one of the following and retry the operation: a) Enter correct Group Passcode. b) Remove existing iDRAC(s) from the local group. Consider upgrading to a supported console if there are more than the maximum iDRACs. c) Verify the network cabling connections. d) Wait for five minutes and retry login.

Message: Unable to remove the group member because the group needs at least one member.

Detailed Description: The group member cannot be removed because the group needs at least one active member. A member in a group that has only one member or whole group members all together cannot be removed, but the group itself must be deleted by running the command.

Recommended Response Action: Delete the group by using the graphical user interface (GUI): On the Group Manager Summary page, click the Edit Group tab. Or, run the RACADM command at the command line interface (CLI) : racadm groupmanager delete -g .

Message	A hardware mismatch is identified for the arg1 zone in the Heater Manager Subsystem.
Arguments	arg1 = ZoneName
Detailed Description	A hardware mismatch is identified for the zone in the Heater Manager Subsystem.
Recommended Response Action	Power off the server and ensure that the heater and sensor cable assembly for zone identified in the message are plugged into the correct connectors and the sensors are properly positioned. If the heater and sensor cable assembly is properly positioned then provide this iDRAC Lifecycle log to the Technical Support team.

Message The iDRAC on the sled arg1 is not communicating with the Management Module(MM).
 Arguments arg1 = slot Number
 Detailed Description The iDRAC on the sled identified in the message is not communicating with the Management Module (MM).
 1) Update the firmware versions of iDRAC and Management Module (MM) to ensure that both have latest applicable versions. 2) If the issue persists, reset iDRAC in the sled. To reset iDRAC using the OpenManage Enterprise-Modular Graphical User Interface (GUI) a) Log in to the GUI. b) Select Hardware. c) Select Chassis Slots. d) Select the slot where the sled is inserted and select iDRAC Reset. 3) If the issue persists and the sled can be safely powered off, select System Reseat in step (d). To reseat by running a RACADM command at the Command Line Interface (CLI), run racadm serveraction -m server- -f reseat. 4) If the issue persists and the sled can be safely powered off, remove the sled, wait for one minute, and then reinsert the sled. 5) If the issue persists, contact your service provider.

HWC2017

Message Fabric mismatch corrected between the server in slot arg1 and IO Module in slot arg2 .

Arguments arg1 = slot number arg2 = slot number

Detailed Description No detailed description available.

Recommended Response Action No response action is required.

Category System Health (HWC = Hardware Config)

Severity Informational

Redfish Event Type Alert

No alerts are applicable for this message

HWC2018

Message A fabric mismatch is detected between the server in slot arg1 and IO Module in slot arg2 .

Arguments	arg1 = slot number arg2 = slot number
Detailed Description	A fabric type mismatch is detected between the server in slot and I/O module as identified in the message. Check the chassis fabric type by using the Manage Module graphic user interface (GUI) and compare against the type of fabric used in the I/O or mezzanine card. To check chassis type on the Manage Module home page, select the server, and then view the I/O module properties.
Recommended Response Action	For more information about the compatible fabric types, see the Manage Module Users Guide available on the support site.
Category	System Health (HWC = Hardware Config)

HWC3006

Message	Unable to QuickDeploy server in slot arg1 .
Arguments	arg1 = number
Detailed Description	There are not enough IPv4 addresses reserved for the servers in this chassis. Therefore the newly inserted server could not be configured with the QuickDeploy feature. Do the following: 1) Check the number of reserved IPv4 addresses for QuickDeploy. 2) Modify it such that the newly inserted blade will obtain an IP address for QuickDeploy. 3) Reseat the server to retry the QuickDeploy operation or manually configure the network parameters for the server. (Note that some chassis models may require a response at the LCD panel).
Recommended Response Action	Do the following: 1) Check the number of reserved IPv4 addresses for QuickDeploy. 2) Modify it such that the newly inserted blade will obtain an IP address for QuickDeploy. 3) Reseat the server to retry the QuickDeploy operation or manually configure the network parameters for the server. (Note that some chassis models may require a response at the LCD panel).

IOV1007

Message Unable to assign a PCIe slot.

Detailed Description	The IOV slot management subsystem detected an error which may prevent the physical assignment/unassignment or turning off of a PCIe slot. The errors can be caused by PCIe training timeouts, false hot plug signals, or installation of an unsupported PCIe adapter card. For a list of supported PCIe adapter cards contact your service provider.
Recommended Response Action	Insert only supported adapter cards into system PCIe slots and make sure they are fully inserted. Retry the operation.

IOV1009

Message	Mismatch in Slot or Virtual Adapter FQDD and Server Slot FQDD count.
Detailed Description	The FQDD pairs identified in the messages do not match in the required method input parameters.
Recommended Response Action	Provide a valid pair of FQDDs. Please refer to the DCIM Chassis PCI Management Profile document for the required parameter definitions.
Category	Configuration (IOV = IO Virtualization)
Severity	Warning
Redfish Event Type	

No alerts are applicable for this message

IOV101

Message	A PCIe adapter arg1 is inserted in arg2 arg3 .
---------	--

Arguments arg1 = device name arg2 = slot type arg3 = slot number

Detailed Description The Chassis Management Controller (CMC) detected the insertion of an adapter in the slot identified in the message.

Recommended Response Action If the adapter in slot identified in the message is mapped to a server, the server must be turned off then back on before server can access adapter. If the adapter in slot is a shared adapter and any server is on then the entire chassis must be turned off and turned on for the server(s) to gain access to the installed shared adapter.

IOV106

Message Unable to power on PCIe adapter arg1 in arg2 arg3 .

Arguments arg1 = device name arg2 = slot type arg3 = slot number

Detailed Description The Chassis Management Controller (CMC) is unable to power on adapter. Possible reasons for power failures are: 1) Adapter not an approved adapter. 2) Adapter not fully inserted in the slot 3) Auxiliary power cable not connected (applicable to slot 1 - 3 only). 4) Adapter is damaged.

Recommended Response Action Make sure a supported PCIe device is used and that it is properly inserted in the PCIe slot. For a list of supported devices, contact the service provider.

IPA0100

Message The iDRAC IP Address changed from arg1 to arg2 .

Arguments arg1 = old IP Address arg2 = new IP Address

Detailed Description The iDRAC IP Address changed from the earlier IP Address identified in the message to the new IP Address identified in the message. This notification will be generated when the iDRAC network card selection is changed, if the DHCP lease expires and the DHCP server assigns another address, or if iDRAC IP address is manually changed.

Recommended Response Action Remote management consoles that have cached or stored the iDRAC IP address may have to be updated with the new IP address either through a re-discovery or manual reconfiguration. A response action may not be required if the console receives this SNMP notification and updates the iDRAC IP address accordingly.

Message The iDRAC Service Module is unable to communicate with iDRAC using the OS to iDRAC Pass-through channel.

Detailed Description The iDRAC Service Module could not successfully communicate with iDRAC, because the OS to iDRAC Pass-through channel is not configured in the USB-NIC mode.

Recommended Response Action Make sure that the OS to iDRAC Pass-through channel is configured only in the USB-NIC mode, and then retry the operation. To enable the OS-to-iDRAC Pass-through channel, run the following command in the order they are listed: 1) racadm set idrac.os-bmc.PTMode usb-p2p 2) racadm set idrac.os-bmc.UsbNicIpAddress 3) racadm set idrac.os-bmc.adminstate enabled.

Message The server operating system (OS) is unable to start the iDRAC Service Module, because it is set to "disabled" in iDRAC.

Detailed Description The server OS could not start the iDRAC Service Module, because the iDRAC Service Module disabled on iDRAC.

Recommended Response Action Enable the iDRAC Service Module on the iDRAC before starting this service on the server OS, and then retry the operation. To enable the module by using iDRAC GUI: Click Network, click OS to iDRAC Pass-through, and then click the USB NIC option. In the OS IP Address box , type an IP address, and then click Apply. To enable the module by using RACADM command, run the following command at the command line interface: racadm set idrac.servicemodule. ServiceModuleEnable enabled.

Message The In-band SNMP Get feature is not functional because an unsupported iDRAC configuration is detected.

Detailed Description The In-band SNMP Get feature is not functional because an unsupported iDRAC configuration is detected.

The In-band SNMP Get feature will not be functional in the following scenarios. 1. When System Lockdown mode is enabled in iDRAC. To disable the System Lockdown mode by using the iDRAC GUI, click iDRAC Dashboard -> More Actions -> Turn off the System Lockdown Mode. By using the RACADM Command Line Interface (CLI), run the racadm set idrac.lockdown.Systemlockdown disabled command. 2. When local RACADM configuration is disabled in iDRAC. To enable the local RACADM configuration by using the iDRAC GUI: a) Click iDRAC Settings -> Services -> Local Configuration. b) From the Disable Local Configuration using RACADM drop-down menu, select Disabled. By using the RACADM Command Line Interface (CLI), run the racadm set iDRAC.LocalSecurity.LocalConfig disabled command. 3. When iDRAC SNMP v3 is disabled in iDRAC. To enable the SNMPv3 feature by using the iDRAC GUI: a) Click iDRAC Settings -> Services -> SNMP Agent -> SNMP Protocol. b) From the drop-down menu, select ALL (SNMP V1|V2|V3). By using the RACADM Command Line Interface (CLI), run the racadm set idrac.snmp.SNMPProtocol All command.

The iDRAC Service Module is running with Limited Functionality Mode hence some features are unavailable. Possible reasons are: 1) OS-to-BMC Passthrough setting in iDRAC is disabled 2) USBNIC interface on the host OS does not have a configured IP address.

Message

The iDRAC Service Module (iSM) is currently working in the Limited Functionality Mode because of one of the two reasons identified in the message. iSM features that depend on OS-To-BMC Passthrough channel will be unavailable in the Limited Functionality mode. To switch iSM from the Limited Functionality Mode, enable the OS-to-BMC Passthrough mode on the iDRAC dashboard. Click Settings > Network Settings > OS-to-BMC Passthrough. To restore communication between iSM and iDRAC, try to repair or reinstall iSM on the host OS.

Detailed Description

For more information, see the iSM Users Guide available on the support site.

LIC002

Message	License Manager is unable to allocate the required resources at startup. The error may occur when License Manager: 1) Is unable to allocate system resources.2) Determines one or more files is incompatible with the current firmware version. This occurs when an older firmware version has been uploaded to a system that was previously running a newer firmware version. If this occurs, the current internal License Manager files are deleted and new ones are created, which align with the firmware version. A license reimport may be required. NOTE: All import, delete, export, view license commands are blocked until this issue is resolved.
Detailed Description	
Recommended Response Action	If the firmware has been rolled back to a previous version, this error may occur. All previously installed licenses must be re-imported. If this is not the case, contact technical support.

Message

Invalid entry: Object does not exist or cannot be found.

Detailed Description

Each License Manager object has a unique identifier by which it may be accessed. If the user supplied identifier is outside the acceptable range or the object no longer exists in the system, then this error is returned. Most common identifiers are the license entitlement identifier, the device Fully Qualified Device Descriptor, or the import transaction identifier assigned to a license when imported.

Recommended Response

Action

Re-issue this command with correct License Manager object identifier.

The license binding ID does not match the device unique identifier.

Detailed Description

All bound perpetual licenses contain the unique identifier of a specific device. The unique identifier binds a license to the device. For example, iDRACs unique identifier is the service tag.

Recommended Response

Action

Obtain a new license file with the correct unique identifier for the device. To use this license, import to the device with the correct unique identifier.

Message Unable to resolve host name.

Detailed Description The DNS query did not complete successfully. This may be because the connection timed out due to an incorrect host name or a DNS server configuration issue.

Recommended Response Action Do the following: 1) Verify host name entered is valid and retry the operation. 2) If the issue persists, verify the DNS server settings are configured properly to resolve the host name.
