Introducing all-round information security expertise.
Today, there’s more to Dell. And it’s called information security expertise, now available to all sizes of organisations.

You see, we’ve acquired SecureWorks, a company recognised (and awarded) as the global leader in keeping information safe, currently protecting thousands of customers in over 70 countries.

That includes companies of all shapes and sizes; from small, right up to Fortune 500.

All those companies have recognised the many benefits of leaving their information protection to experts who have the people, the skills and technology to keep ahead of every kind of threat that’s around today, or looms tomorrow.

**Our know-how and experience will keep you safe in a perilous digital world.**
From our security operations centres around the world, Dell SecureWorks monitors around 15 billion security events and potential threats worldwide – every day.

Also, we have the valuable backup of hundreds of analysts and a world-class Counter Threat Unit quickly identifying the short and long-term threats that confront our customers, and then designing the necessary counter-measures.

Working so globally, with so many customers in so many sectors, we can also instantly alert the rest of the world to something that’s happening far away.

Then, forewarned, we have the skills, experience and knowledge to make sure you and your organisation is thoroughly protected.

**Wherever a threat looms, we’ll spot it early and deal with it appropriately.**
With Dell SecureWorks on the job, the last thing you have to worry about is the total security of your network, because our highly-trained and accredited experts are monitoring it 24/7.

And if a real threat comes up, we have what it takes to react promptly and with greater resources than even the best in-house security teams.

So, you can get on with the real business of doing business, safe in the knowledge that when it comes to information security we really do have you covered.

You can rest assured, that your information will be protected every second of every day.
Let’s face it, even the most competent in-house security teams can be under pressure at the best of times.

The security climate can change for the worse very quickly, with little warning.

Factor in everyday issues such as holiday cover, sickness and staff turnover, and the challenge to sustain maximum protection takes on a whole new complexion.

Outsource your information security to Dell SecureWorks and those issues won’t be your concerns any more.

What’s more, you can redeploy those skills (and budget) to focus on the issues and functions that will really make a difference to the core purpose of your business.

Taking the heat off you and your team – rain or shine.
Effective security monitoring and management needs good people, not to mention the best and latest technology.

If you employ an in-house team – that costs money, of course. And it’s not an insignificant amount either.

Once you take into account salaries, training, hardware, software and updates – it all adds up to a sizeable sum.

However, outsource your information security to Dell SecureWorks and those costs shrink dramatically, replaced by a regular, predictable amount for a service that is right for you.

All backed up with the global resources and expertise that sets us apart.

**Not only will we protect you more, you can count on us to cost you less too.**

The savings all add up to a nice round sum.
Reaching compliance is never quite as easy as just ticking boxes in a straight audit. The world is more complicated than that.

Our accomplished QSAs and compliance experts have a rounded background in IT security, coupled with business savvy and a comprehensive understanding of the requirements.

They have security, technical and business expertise, together with hands-on practical experience.

And with that breadth and depth of experience comes the common sense and confidence to have a pragmatic view on how standards can be best implemented in your organisation.

Our experts will work as your partner to deliver better security solutions while gaining compliance quickly and cost-effectively.

From PCI to 27001, we’ll make your compliance run smoothly.
Dell SecureWorks offers the most complete range of world-class information security services.

A full breadth of Managed Security, Counter Threat Intelligence, and Security and Risk Consulting.

Consistently awarded for quality and service, our security services have the flexibility to integrate into even the most complex environments.

So you get a tailored service that fits your needs, whether that’s full outsourcing, co-management, monitoring or automated correlation and reporting.

And because Dell SecureWorks is a vendor-neutral provider, your technology solution will be the one that’s best and most cost-effective too.

Just choose which services are best for you.
To round up, a list of our services.
