Detect and respond to cyber threats

Safeguard your organization’s digital assets and disrupt attacks before they do damage.

Monitor and Analyze
- User behavior
- Network traffic
- System logs
- Security data

Detect and Respond
- Unauthorized access
- Incidents and intrusions
- Malware infections
- Data breaches

Steps for advancing cybersecurity maturity
- Continuous log monitor
- Threat detection analysis
- Early security alerting and notification
- Incident response
- Remediation and recovery
- Forensic analysis
- Include AI/ML to predict and automate

Contain risks | Safeguard data | Ensure business continuity

Protect your organization’s operations and reputation
