From design to end-of-life and everything in between, we work to improve the environmental impact of the products you purchase. As part of that process, we estimate the specific impacts throughout the lifecycle. This includes the contributions from materials, manufacturing, distribution, use and end-of-life management.

This product’s estimated carbon footprint:

7810 kgCO₂e *

Estimated impact by lifecycle stage:

Dell uses PAIA (Product Attribute to Impact Algorithm) to perform product carbon footprints. PAIA is a streamlined LCA tool developed by MIT’s Materials System Laboratory. It takes into consideration important attributes of the product which can be correlated to activities in order to calculate the product carbon footprint.

Due to high configurability of servers, the information provided here was calculated based on the products highest selling configuration (see assumptions on page 2).
* This product has an estimated standard deviation of +/- 7850 kgCO2e

As part of our commitment to transparency, the chart to the right demonstrates the degree of uncertainty that exists within the PAIA model for product carbon footprinting, based on assumptions we have made for select variables.

**Assumptions for calculating product carbon footprint:**

<table>
<thead>
<tr>
<th>Product Weight</th>
<th>26.02 kg</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server Type</td>
<td>Tower</td>
</tr>
<tr>
<td>Product Lifetime</td>
<td>4 years</td>
</tr>
<tr>
<td>Use Location</td>
<td>EU</td>
</tr>
<tr>
<td>Assembly Location</td>
<td>EU</td>
</tr>
<tr>
<td>Energy Demand (Yearly TEC)</td>
<td>1577.238 kWh</td>
</tr>
<tr>
<td>HDD/SSD Quantity</td>
<td>x4 1.2TB 2.5&quot; HDD</td>
</tr>
<tr>
<td>DRAM Capacity</td>
<td>16BG</td>
</tr>
<tr>
<td>CPU Quantity</td>
<td>2</td>
</tr>
</tbody>
</table>

1 of these products... has a footprint approx. equivalent to **driving 19,135 miles** in a passenger car.

10 of these products... have a footprint approx. equal to what **92 acres of US forests** can absorb in a year.

100 of these products... have a footprint about the same as the annual average carbon footprint of **156 people**.

To help our customers and other stakeholders contextualize product carbon footprint values, we provide these approximate equivalencies. Please remember these are estimates and should not be used for emission inventory or formal carbon footprinting exercises.

Calculations are based on the following methodologies: 2.45 miles driven per 1 kg co2e (source: [U.S. EPA](https://www.epa.gov)); approx. 850 kg co2e absorbed per acre of forests over a year (source: [U.S. EPA](https://www.epa.gov)); global personal carbon footprint estimated at 5 MtCO2e per person (source: [World Bank](https://www.worldbank.org)).
