PREMIUM & LIGHTWEIGHT DESIGN

The new, premium design of the 7550 is 19% smaller, and actually fits inside of the previous generation. It has a 21% larger touchpad, new Pro 2 keyboard, and top-firing speakers which further sets it apart from the previous generation. Along with the premium materials and masterful craftsmanship all of this adds up to creators, designers and beyond having a powerful system without the stigma of clunky design - putting elegance and performance in your hands instead.

The 7550 was engineered to provide designers and creators, and up to geologist and data scientists a mobile platform with the power of a desktop, so they can take their work with them, where ever they may go.

INTELLIGENT PERFORMANCE

Extract maximum performance from demanding applications with 10th Gen Intel® Core™ and Xeon® 8-core processors, up to 128GB of 2933MHz memory and 6TBs of storage. Keep pace with graphic and data-intensive tasks, including VR and AI, with up to NVIDIA® Quadro® RTX 5000 professional graphics. Our advanced and patented thermals keep the system running at peak performance while keeping the system cool and quiet.

Precision workstations feature Dell Optimizer for Precision which uses Artificial Intelligence software to learn how you work and adapts to your style to create a smarter, more-personal experience. The result? Improved system responsiveness, better application performance, smarter use of battery power, storage and audio optimization and more reliable network connectivity. All from a single console that you manage from WorkspaceOne or Microsoft SCCM—allowing IT staff to deploy, configure, update, and monitor Optimizer remotely.

MISSION CRITICAL RELIABILITY

ExpressSign-in identifies you when you walk up, waking your workstation and getting you ramped up quickly. It will also lock your screen when you walk away for an added layer of security.

The new design of the 7550 provides for brighter (800 nits) and up to an HDR600 display, which is 100% Adobe color gamut. There are also low blue light filter, ambient sensing and touch options available that provide for less eye strain and ease of use.

Dell Technologies Unified Workspace

Dell Technologies Unified Workspace is the most comprehensive solution to deploy, secure, manage and support virtually all devices from the cloud. We designed this revolutionary solution with intelligence and automation providing you with visibility across the entire endpoint environment. We help you save time, improve user experience, optimize resources and strengthen security.

Our modern deployment solution, ProDeploy in the Unified Workspace allows you to revolutionize the way deployment gets done. By spending just one hour for set up, IT can then hand deployment to Dell and have preconfigured systems shipped directly to the end users—wherever they are.

Dell Endpoint Security for the Unified Workspace helps you manage growing cyber risks while embracing workforce transformation. With Dell SafeGuard and Response powered by Secureworks, you gain actionable insight to help you quickly and efficiently prevent, detect and respond to cyber-attacks—keeping your environment free from harm.

We integrated our hardware management solution Dell Client Command Suite with VMware Workspace ONE, allowing you to take advantage of unified endpoint management (UEM) and manage the firmware, operating system and applications for all devices from the Workspace ONE console. UEM simplifies the management of the entire environment saving IT time from having to work between separate consoles for PCs and phones.

ProSupport Plus continues to be the only predictive and proactive support in the market. When compared to key competitors, ProSupport Plus with SupportAssist reduced time to resolve a failed hard drive with up to 11x faster time to resolution*.
