³ A 64-bit operating system is required to support 4GB or more of system memory.
⁴ Significant system memory may be used to support graphics, depending on system memory size and other factors.
⁵ ISV certification applies to select configurations.
⁶ GB means 1 billion bytes and TB equals 1 trillion bytes; actual capacity varies with preloaded material and operating environment and will be less.
⁷ The Dell Precision T3500 uses a very efficient Active Power Factor Correction (APFC) power supply. Dell recommends only Universal Power Supplies (UPS) based on Sinewave output for APFC PSUs, not an approximation of a Sinewave, Square Wave or quasi-Square Wave (see UPS Technical Specifications). If you have questions, please contact the manufacturer to confirm the output type.
