The Dell OCm14102B-N5-D dual-port 10Gb Ethernet (10GbE) mezzanine adapter is based on the Emulex fourth-generation OneConnect® Network Adapter technology, featuring the leading 10GbE Network Adapter to support Local Area Network (LAN) and RDMA over Converged Ethernet (RoCEv2) on a single 10GbE adapter.

Dell PowerEdge 13th generation servers, with Dell adapters provided by Emulex, offer multiple benefits for the Dell enterprise customer, including:

- Accelerating workload performance through consolidation of multiple networking services on a single 10GbE adapter platform
- Increasing data center IT agility and scalability through deployment of a secure, private or hybrid, multi-tenant cloud infrastructure
- Maximizing server hardware utilization through CPU efficient networking

The OCm14102B-N5-D dual-port 10GbE adapters offer more scalable virtualization with support for enhanced Single-Root I/O Virtualization (SR-IOV), SMB Direct with RoCEv2, Dell switch independent NIC extended partitioning (NParEP) and next-generation overlay networking technologies that address the requirements of virtual machine (VM) mobility and massive scaling of Layer 2 domains inside private or hybrid cloud infrastructures.

**Key features**

- Network and RDMA traffic over a common 10GbE infrastructure
- SMB Direct with RoCEv2 support
- SR-IOV support
- Superior performance and efficiency:
  - Overlay network tunneling offloads (VXLAN and NVGRE)
  - TCP/IP stateless offloads
- VMware vSphere NetQueue support
- Microsoft Windows Server VMQ and Dynamic VMQ support
- Support for Dell’s new NParEP (NIC extended partitioning), offering up to 16 partitions per adapter
- PCIe 3.0 compliant

**Accelerated Microsoft application performance with SMB Direct with RoCEv2 support**

RDMA reduces CPU utilization and data latency and improves throughput by bypassing the host TCP/IP stack. SMB Direct RoCEv2 leverages Converged Ethernet, also known as Data Center Bridging (DCB), as a lossless physical layer networking medium. RoCEv2 architecture removes the TCP/IP stack and a data copy step. This technology works by seamlessly sensing, without user action or intervention, the presence of an RDMA compliant adapter and switching from standard TCP/IP networking to SMB Direct mode. Dell customers can now benefit from faster Hyper-V live migrations and high performance Network Attached Storage (NAS) for applications such as Microsoft SQL Server and Microsoft Unified Communications and Collaboration applications (Exchange, Lync and SharePoint).

**Emulex Virtual Network Exceleration™ (VNeX)**

Overlay network offloads for multi-tenant cloud networking

Dell is delivering a superior overlay networking solution for Dell PowerEdge 13th generation servers, by offering the Emulex 10GbE Converged Network Adapter. Together, Dell and Emulex offer solutions that include the industry’s only hardware offload support for Virtual Extensible Local Area Network (VXLAN) and Network Virtualization using Generic Routing Encapsulation (NVGRE) tunnels. These solutions are designed to simplify VM mobility and network scalability while optimizing server performance when compared to adapters that lack offload capability.
OCm14102B-N5-D Dual-port 10GbE Network Mezzanine Adapter

Emulex VNeX tunnel offload is powered by a multi-core adapter ASIC engine that accelerates the performance of overlay networking. By offloading the Ethernet packet header encapsulation process, while simultaneously preserving legacy stateless TCP offloads, Emulex VNeX provides full native network performance with reduced server CPU utilization in an overlay network environment, enabling greater VM density. It also results in increased server power efficiency reducing data center energy and cooling expenses. Additionally, this technology allows Dell customers to massively scale networks to meet the growing demands of simultaneously servicing many user groups.

Optimized bandwidth allocation with support for new Dell NParEP
Dell has doubled the NIC partitioning bandwidth with the new Dell NParEP feature supported on Emulex OCx1410x adapters. Dell PowerEdge 13th generation servers, with Emulex OCm14102B-N5-D network adapters, offer customers the ability to configure up to 16 NIC functions (partitions) per adapter, or up to eight NIC functions per port. NParEP is ideal for virtualized server environments because bandwidth allocation can be optimized to support I/O intensive applications, virtualization services and server management functions.

Optimized host server virtualization density using SR-IOV
SR-IOV provides a more cost-effective solution than multiple physical adapter ports by optimizing I/O for VMs, enabling higher host server virtualization ratios to deliver maximum server return on investment (ROI). SR-IOV enables multiple VMs to directly access the OCm14102B-N5-D’s I/O resources, thus allowing the VM’s network I/O to bypass the hypervisor’s virtual switch and take a path directly between the VM and the adapter, eliminating redundant I/O processing in the hypervisor. This, in turn, allows higher I/O performance, lower CPU utilization and significantly reduced latency as compared to the alternative of software-emulated NIC devices that are implemented in the hypervisor.

Simplified management using the Dell iDRAC8 framework or Emulex OneCommand® Manager application
The Dell OCm14102B-N5-D supports both Dell and Emulex management tools, and is fully integrated with Dell’s Lifecycle Controller management scheme. Dell Lifecycle Controller provides fast, efficient, secure local and remote deployment, configuration and update capabilities. The Emulex OneCommand Manager application provides centralized management of Dell adapters based on Emulex OneConnect NICs, CNAs and LightPulse HBAs throughout the data center from a single management console. The OneCommand Manager application provides a graphical user interface (GUI) and a scriptable command line user interface (CLI). OneCommand Manager for VMware is fully integrated with VMware vCenter, enabling ‘single window pane’ management for VMware deployments.

Enterprise-class performance and reliability
Leveraging four generations of advanced, field-proven controller and adapter technology, the Dell OCm14102B-N5-D meets the robust interoperability and reliability requirements of enterprise cloud and scale-out data centers.

Key benefits
- Minimize wasted idle bandwidth by optimizing bandwidth allocation for applications, management and virtualization services using Dell NParEP
- Perform vMotion or Live Migration without reconfiguring network resources
- Reduce capital and operational expenditures (CAPEX and OPEX) with maximized server efficiency
  - Increase throughput
  - Increase server CPU effectiveness
  - Improve server power efficiency
- Provision secure, multi-tenant cloud-scale networks
  - Exceed the typical 4096 VLAN limit to enable support for larger numbers of tenants/user groups
- Simplified and flexible system management using Dell iDRAC8 with Lifecycle Controller or Emulex OneCommand Manager
Converged Enhanced Ethernet (CEE) and Data Center Bridging (DCB)

- IEEE 802.1Qbb Priority Flow Control (PFC)
- IEEE 802.1Qaz Enhanced Transmission Selection (ETS)
- IEEE 802.1Qaz Data Center Bridging Exchange (DCBX)
- IEEE 802.1Qau Quantized Congestion Notification (QCN)
- Absolute per-priority rate control option/configuration

Remote Direct Memory Access (RDMA)

- Direct data placement in application buffers without CPU intervention
- Supports IBTA RoCE and RoCEv2 (Layer 3 routing) specification
- Linux Open Fabrics Enterprise Distribution (OFED) support
- Low latency queues for small packet sends and receives
- Windows Server SMB Direct (SMB over RDMA)
- Linux NFS over RDMA

PCI Express (PCIe) interface

- PCIe Gen 3.0 x8 (8, 5.0, and 2.5 GT/s per lane) compliant interface:
  - Up to 64 Gbps full duplex bandwidth
  - Supports up to 8 PCIe Physical Functions (PFs) per port
  - Support for x1, x2, x4 and x8 link widths
    - Configurable width and speed to optimize power versus bandwidth
    - SR-IOV:
      - Supports up to 63 PCIe VFs for NIC per port
      - Up to 704 Message Signal Interrupts (MSI-X)
      - Advanced Error Reporting (AER)
      - Supports D0, D3 (hot & cold) power management modes
      - Completion Timeout (CTO)
      - Function Level Reset (FLR)
      - Alternative Routing ID Interpretation (ARI)

Comprehensive OS support

- Windows Server
- Red Hat Enterprise Linux
- Novell SUSE® Linux Enterprise Server
- VMware ESX
- Citrix XenServer

Management, boot support

- Support for Dell management tools:
  - iDRAC shared LOM via NCSI
  - OS2BMC
  - RT-CEM
  - UEFI HII
  - UEFI Firmware Management
  - UEFI Configuration Access
  - Support for Emulex OneCommand Manager Management Application for configuration and control

Management, boot support (continued)

- VMware vCenter management plugin support
- Role-based management, integrated with Active Directory and LDAP
- Flexible personality definition for networking and storage protocols
- Optimized bandwidth allocation with switch independent Dell NParEP enhancements

Control

- Wake on LAN Support
- UEFI and x86 remote boot support including PXE v2.1 and UEFI 2.3.1
- MAC statistics gathering (SNMP, Ethernet MIB, MIIB2, RMON, RMON2)
- Offline and online firmware updates
- Integrated Thermal Sensor works with management utilities

Hardware environments

- Dell PowerEdge 13th Generation Servers

Environmental requirements

- Operating temperature: 0° to 55°C (32° to 131°F)
- Storage temperature: -40° to 70°C (-40° to 158°F)
- Relative humidity: 5% to 95% non-condensing

Agency approvals

- North America
  - FCC Class A
  - UL/CSA Recognized
  - Class 1 Laser Product per DHHS 21CFR (j)
- Australia / New Zealand
  - C-Tick Mark
- Europe
  - CE Mark
  - EU RoHS compliant
  - TUV Bauart Certified
  - Class 1 Laser Product per EN60825-1
- Japan
  - VCCI Class A
- Taiwan
  - BSMI Class A
- Korea
  - MSIP (formally KCC/MIC) Class A
- China
  - China RoHS Compliant
