Advanced System Manageability Modes

NOTE: Hardware management mode options allow you to select the right systems management feature support for your enterprise. Dell's innovative approach to scalable remote client management offers you a choice of built-in hardware management capabilities across platform offerings.

The latest generation of Broadcom® TruManage™ technology provides the capability to manage your install base of systems regardless of the power or O/S state of the system.

This functionality allows IT to address many issues remotely rather than having to physically visit systems.

The OptiPlex™ XE supports Broadcom® TruManage™ technology which supports the following features:

BIOS Management, asset reporting, remote troubleshooting and repair, power on for remote patching/updating.

System Monitoring Options

NOTES:

- The Dell Watchdog Timer is hardware based with a software user interface
- The Dell Watchdog Timer must be enabled through the Dell factory; cannot be installed after purchase.
- Once enabled, the end user has the ability to configure the desired system response taken in the event a system hangs during boot or O/S load, or if an application does not respond in the specified amount of time.

	DT	SFF
Dell Watchdog Timer	Optional via factory installation only	

Memory

NOTES:

- Your computer supports a maximum of 8GB of memory when you use four 2GB DIMMs; however, 32-bit operating systems, such as the 32-bit version of Microsoft® Windows® XP, can only use a maximum of 4 GB of address space. Moreover, certain components within the computer require address space in the 4GB range. Any address space reserved for these components cannot be used by computer memory; therefore, the amount of memory available to the operating system is less than 4GB.
- The entire 8GB memory range is available to 64-bit operating systems.
- Memory modules should be installed in pairs of matched memory size, speed, and technology. If the memory modules are not installed in matched pairs, the computer will continue to operate, but with a slight reduction in performance.

¹The total amount of available memory will be less than 4GB. The amount less depends on the actual system configuration. To fully utilize 4GB or more of memory requires a 64-bit enabled processor and 64-bit operating system.

¹¹The OptiPlex XE is tested to withstand 24x7 operation in 45°C environments standard within 3 year warranty period, and can support 24x7 operation over 3 year warranty period in environments up to 55°C with use of optional ducting kit. The XE motherboard uses at least 105°C/3000 hrs E-Capacitors or Polymer Capacitors. The XE motherboard also uses at least 15u gold plating for internal connectors/slots and normal 30u gold plating for external ports (except for VGA/10u and Serial/15u). Overcurrent protection polyfuses are used on USB, serial, PS/2, VGA and DP ports, and thermal sensors on CPU, SIO chip, CPU inlet, and PSU inlet for thermal protection.

Power

NOTE: The OptiPlex XE utilizes wide-ranging power supplies. These power supplies do not require users to switch or reconfigure the PSU when alternating between 100-240VAC electrical currents/sockets. The XE also uses a more efficient Active Power Factor Correction (APFC) power supply. Dell recommends only Uninterruptible Power Supplies (UPS) based on Sine Wave output for APFC PSUs, not an approximation of a Sine Wave, Square Wave, or quasi-Square Wave. If you have questions, please contact the manufacture to confirm the output type.

Chassis Enclosure & Ventilation Requirements

Enclosure Ventilation

If your enclosure has doors, they need to be of a type that allows at least 30% airflow through the enclosure (front and back).

Enclosure Minimum Clearance

Leave a 10.2 cm (4 in.) minimum clearance on all vented sides of the computer to permit the airflow required for proper ventilation.

Recommended Enclosure

Do not install your computer in an enclosure that does not allow airflow. This restricts the airflow and impacts your computer's performance, possibly causing it to overheat.

Open Desk Minimum Clearance

If your computer is installed in a corner, on a desk, or under a desk, leave at least 5.1 cm (2 in.) clearance from the back of the computer to the wall to permit the airflow required for proper ventilation.

Regulatory Compliance and Environmental

¹⁷ All tests are conducted according to ISO 7779 and declared according to ISO 9296 except 90% CPU. For this mode, the system CPU was stressed at 90% utilization with no other peripheral device actively seeking. This test mode is not specified in ISO 7779, but was measured using the same microphone distances and measurement techniques defined for the other reported operating modes.

¹⁸ Declared Sound Power rounded to nearest tenth of a bel per ISO 9296 section 4.4.2
