General

Languages Visual Studio provides several programming languages for software development	Visual Web Developer 2008 Express Edition	Visual Basic 2008 Express Edition	Visual C# 2008 Express Edition	Visual C++ 2008 Express Edition	Visual Studio 2008 Standard Edition	Visual Studio 2008 Professional Edition	Visual Studio Team System 2008 Architecture Edition	Visual Studio Team System 2008 Database Edition	Visual Studio Team System 2008 Development Edition	Visual Studio Team System 2008 Test Edition	Visual Studio Team System 2008 Team Suite
JScript 8.0 is an open implementation of JavaScript for creating active online content for the Web	◆				◆	◆	◆	◆	◆	◆	◆
Visual Basic 2008 is an evolution of the Visual Basic language that is engineered for productively building type-safe and object-oriented applications	◆	◆			◆	◆	◆	◆	◆	◆	◆
Visual C# 2008 brings the expressiveness and elegance of C-style languages to enable rapid application development for the .NET Framework	◆		◆		◆	◆	◆	◆	◆	◆	◆
Visual C++ 2008 provides a powerful and flexible development environment for creating Microsoft Windows-based and Microsoft .NET-based applications				◆	◆	◆	◆	◆	◆	◆	◆

Project System Use the Project System to manage items required by your development effort, such as references, data connections, folders, and files	Visual Web Developer 2008 Express Edition	Visual Basic 2008 Express Edition	Visual C# 2008 Express Edition	Visual C++ 2008 Express Edition	Visual Studio 2008 Standard Edition	Visual Studio 2008 Professional Edition	Visual Studio Team System 2008 Architecture Edition	Visual Studio Team System 2008 Database Edition	Visual Studio Team System 2008 Development Edition	Visual Studio Team System 2008 Test Edition	Visual Studio Team System 2008 Team Suite
Auto-Convert Projects enables you to easily move projects based on the .NET 2.0 Framework to .NET Framework 3.5		◆	◆								
Multitargeting Support enables you to target your code to a specific version of the .NET Framework	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆
Service Reference adds references to Windows Communication Foundation (WCF) services	◆	◆	◆		◆	◆	◆	◆	◆	◆	◆
Solution Explorer provides an organized view of a solution's projects and files	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆
Solutions can contain multiple projects that you can open, close, and save together	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆
Upgrade Wizard enables you to open a Visual Basic 6.0 project in Visual Basic 2008 and step through the upgrade process		◆			◆	◆		◆	◆	◆	◆
Visual Studio Conversion Wizard enables you to convert a solution or project to the project file format that is used by this version of Visual Studio	◆			◆	◆	◆	◆	◆	◆	◆	◆
Web References enable you to use objects and methods provided by a Web service in your code	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆

Extensibility Visual Studio is a highly-extensible and automatable integrated development environment	Visual Web Developer 2008 Express Edition	Visual Basic 2008 Express Edition	Visual C# 2008 Express Edition	Visual C++ 2008 Express Edition	Visual Studio 2008 Standard Edition	Visual Studio 2008 Professional Edition	Visual Studio Team System 2008 Architecture Edition	Visual Studio Team System 2008 Database Edition	Visual Studio Team System 2008 Development Edition	Visual Studio Team System 2008 Test Edition	Visual Studio Team System 2008 Team Suite
Add-Ins enable you to create Visual Studio add-ins to extend or automate the functionality of Visual Studio					◆	◆	◆	◆	◆	◆	◆
Macros and Macros IDE enable you to create, manipulate, edit, and run macros to automate Visual Studio using Visual Studio's automation model					◆	◆	◆	◆	◆	◆	◆
Visual Studio Add-in project template for creating an Add-in loadable into both the Visual Studio and the Visual Studio Macros IDE					◆	◆	◆	◆	◆	◆	◆
VSPackages enable you to create software modules for extending Visual Studio with UI elements, services, projects, editors, and designers					◆	◆	◆	◆	◆	◆	◆
Wizards enable you to extend or automate the functionality of Visual Studio using programs that lead a user through a series of actions to accomplish a complex, repetitive, or difficult task					◆	◆	◆	◆	◆	◆	◆

External Tools Visual Studio includes a number of core external tools to aid in developing and debugging your applications	Visual Web Developer 2008 Express Edition	Visual Basic 2008 Express Edition	Visual C# 2008 Express Edition	Visual C++ 2008 Express Edition	Visual Studio 2008 Standard Edition	Visual Studio 2008 Professional Edition	Visual Studio Team System 2008 Architecture Edition	Visual Studio Team System 2008 Database Edition	Visual Studio Team System 2008 Development Edition	Visual Studio Team System 2008 Test Edition	Visual Studio Team System 2008 Team Suite
.NET Framework Tools make it easier for you to create, deploy, and manage applications and components that target the .NET Framework (see .NET Framework Tools)	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆
ATL/MFC Trace Tool displays debug trace messages in the ATL and MFC sources					◆	◆	◆	◆	◆	◆	◆
Create GUID generates a GUID based on specified criteria					◆	◆	◆	◆	◆	◆	◆
Dotfuscator Community Edition enables you to protect your managed application from reverse engineering					◆	◆	◆	◆	◆	◆	◆
Error Lookup retrieves a system error message or module error message based on the value entered					◆	◆	◆	◆	◆	◆	◆
External Tools dialog box enables you to add tools to the Tools menu, which you can then launch from within Visual Studio	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆
Source Control Integration enables two options: source control solution based on the Source Control Plug-in API (formerly known as the MSSCCI API), or a source control VSPackage					◆	◆	◆	◆	◆	◆	◆
Spy++ provides a graphical view of the processes, threads, windows, and window messages of a system					◆	◆	◆	◆	◆	◆	◆

Add-Ins/Macro Security options enable you to define security settings for running add-ins and macros in Visual Studio					◆	◆	◆	◆	◆	◆	◆
AutoRecover options enable you to specify whether or not files are automatically saved periodically while they are open, and whether restore modified files if Visual Studio shuts down unexpectedly	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆
Documents options to control the display of documents in Visual Studio and manage external changes to documents and files	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆
Filtered Options enables you to simplify the options available to a subset of those available	◆	◆	◆	◆							
Fonts and Colors options enables you to establish a custom font and color scheme for various user interface elements in Visual Studio, including syntax-specific fonts and colors	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆
General options enable you to specify some basic IDE options, such as document UI, application animations, and file associations	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆
Import and Export Settings Wizard enables you to export settings, import settings, or overwrite your settings by using a predefined settings collection	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆
International Settings options enable you to change the default language when you have more than one language version of Visual Studio installed	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆
Visual Studio Settings enable you to choose from a number of predefined IDE settings					◆	◆	◆	◆	◆	◆	◆
Web Browser options enable you to sets options for both the internal Web browser and Internet Explorer	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆

Setup Experience Visual Studio Setup provides a consolidated setup experience	Visual Web Developer 2008 Express Edition	Visual Basic 2008 Express Edition	Visual C# 2008 Express Edition	Visual C++ 2008 Express Edition	Visual Studio 2008 Standard Edition	Visual Studio 2008 Professional Edition	Visual Studio Team System 2008 Architecture Edition	Visual Studio Team System 2008 Database Edition	Visual Studio Team System 2008 Development Edition	Visual Studio Team System 2008 Test Edition	Visual Studio Team System 2008 Team Suite
Express Setup provides the most streamlined setup experience with a lightweight download and the fewest decisions to make during setup	◆	◆	◆	◆							
Full Setup provides the most control over which components to install during setup						◆	◆	◆	◆	◆	◆
Simplified Setup provides some customization over which components to install during setup					◆						

Help System Visual Studio uses MSDN Library for integrated and comprehensive documentation	Visual Web Developer 2008 Express Edition	Visual Basic 2008 Express Edition	Visual C# 2008 Express Edition	Visual C++ 2008 Express Edition	Visual Studio 2008 Standard Edition	Visual Studio 2008 Professional Edition	Visual Studio Team System 2008 Architecture Edition	Visual Studio Team System 2008 Database Edition	Visual Studio Team System 2008 Development Edition	Visual Studio Team System 2008 Test Edition	Visual Studio Team System 2008 Team Suite
Document Explorer provides a way of interacting with the help topics that are written for various products and technologies	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆
Dynamic Help window automatically displays links to Help, training, and other topics, based on the context of what you are doing in Visual Studio	◆			◆	◆	◆	◆	◆	◆	◆	◆
MSDN Express Library is an abridged version of the MSDN Library that is specially tailored for the Visual Studio Express products	◆	◆	◆	◆	◆						
MSDN Library is an essential resource for developers using Microsoft tools, products, and technologies (available as a separate download, but not included with Express or Standard editions)	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆
MSDN Library Online provides online access to MSDN Library content	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆

Basic Tools

Code Editing Tools The ability to write and modify text and code is a core function of Visual Studio 2008	Visual Web Developer 2008 Express Edition	Visual Basic 2008 Express Edition	Visual C# 2008 Express Edition	Visual C++ 2008 Express Edition	Visual Studio 2008 Standard Edition	Visual Studio 2008 Professional Edition	Visual Studio Team System 2008 Architecture Edition	Visual Studio Team System 2008 Database Edition	Visual Studio Team System 2008 Development Edition	Visual Studio Team System 2008 Test Edition	Visual Studio Team System 2008 Team Suite
Auto Using to detect when your code is missing a using statement to qualify a data type	◆		◆		◆	◆	◆	◆	◆	◆	◆
Bookmark window to display and navigate to bookmarks in your code	◆			◆	◆	◆	◆	◆	◆	◆	◆
Bookmarks enable you to mark lines of code and navigate to them	◆		◆	◆	◆	◆	◆	◆	◆	◆	◆
Class Designer provides a visual design surface called a class diagram that you can use to work with classes and other types in a project					◆	◆	◆	◆	◆	◆	◆
Class View displays the symbols defined, referenced, or called in the application you are developing	◆		◆	◆	◆	◆	◆	◆	◆	◆	◆
Code Colorization colorizes code tokens and constructs so they are easier to scan and read	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆
Code Definition window is a read-only editor view that displays the definition of a symbol in a code file stored in, or referenced by, the active project				◆	◆	◆	◆	◆	◆	◆	◆
Code Snippets Manager to add folders to the folder list that the Code Snippet Picker scans for XML .snippet files	◆	◆	◆		◆	◆	◆	◆	◆	◆	◆
Code Snippets provide a way for you to insert ready-made snippets of code into your projects	◆	◆	◆		◆	◆	◆	◆	◆	◆	◆
Document Outline window provides an outline view of elements and scripts in the current document	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆
Find All References enables you to find every line of code that references a particular class or member	◆	◆	◆		◆	◆	◆	◆	◆	◆	◆
Generate Method Stub is an IntelliSense Automatic Code Generation feature that provides an easy way to create a new method declaration when writing a method call	◆		◆		◆	◆	◆	◆	◆	◆	◆
IntelliSense accelerated development by making language references easy to access and use	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆
Metadata as Source enables you to view metadata that appears as C# source code in a read-only buffer	◆		◆		◆	◆	◆	◆	◆	◆	◆
Object Browser enables you to explore available objects and their members	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆
Organize Usings enables you to sort using statements and remove unused usings	◆		◆		◆	◆	◆	◆	◆	◆	◆
Properties window enables you to view and change the design-time properties and events of selected objects that are located in editors, designers, and other tools windows	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆
Property Manager enables you to modify project settings that are defined in property sheets				◆	◆	◆	◆	◆	◆	◆	◆

Code Editing Tools The ability to write and modify text and code is a core function of Visual Studio 2008	Visual Web Developer 2008 Express Edition	Visual Basic 2008 Express Edition	Visual C# 2008 Express Edition	Visual C++ 2008 Express Edition	Visual Studio 2008 Standard Edition	Visual Studio 2008 Professional Edition	Visual Studio Team System 2008 Architecture Edition	Visual Studio Team System 2008 Database Edition	Visual Studio Team System 2008 Development Edition	Visual Studio Team System 2008 Test Edition	Visual Studio Team System 2008 Team Suite
Resource Editors are specialized environments for creating, modifying, and previewing resources included in a Visual Studio project				◆	◆	◆	◆	◆	◆	◆	◆
Source Code and Markup Formatting enables the text editor to format source code and markup on a per language basis	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆
Surround-With Code Snippets enable you to wrap selected lines of code a code snippet	◆		◆		◆	◆	◆	◆	◆	◆	◆
Tag Navigator represents the element that is currently selected in the document and the hierarchy of parent tags to which it belongs	◆				◆	◆	◆	◆	◆	◆	◆
Task List window helps you create and manage a list of programming tasks	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆
Toolbox displays icons for items that you can add to the various design surfaces in Visual Studio	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆

Refactoring Tools Refactoring tools help you improve your code after it has been written by changing its internal structure without changing its external behavior	Visual Web Developer 2008 Express Edition	Visual Basic 2008 Express Edition	Visual C# 2008 Express Edition	Visual C++ 2008 Express Edition	Visual Studio 2008 Standard Edition	Visual Studio 2008 Professional Edition	Visual Studio Team System 2008 Architecture Edition	Visual Studio Team System 2008 Database Edition	Visual Studio Team System 2008 Development Edition	Visual Studio Team System 2008 Test Edition	Visual Studio Team System 2008 Team Suite
Encapsulate Field refactoring enables you to quickly create a property from an existing field, and then seamlessly update your code with references to the new property					◆	◆	◆	◆	◆	◆	◆
Extract Interface refactoring provides an easy way to create a new interface with members that originate from an existing class, struct, or interface					◆	◆	◆	◆	◆	◆	◆
Extract Method refactoring provides an easy way to create a new method from a code fragment in an existing member	◆		◆		◆	◆	◆	◆	◆	◆	◆
Promote Local Variable to Parameter refactoring provides an easy way to move a variable from a local usage to a method, indexer, or constructor parameter while updating the call sites correctly					◆	◆	◆	◆	◆	◆	◆
Remove Parameters refactoring provides an easy way to remove parameters from methods, indexers, or delegates					◆	◆	◆	◆	◆	◆	◆
Rename refactoring provides an easy way to rename identifiers for code symbols such as fields, local variables, methods, namespaces, properties, and types	◆	◆	◆		◆	◆	◆	◆	◆	◆	◆
Reorder Parameters refactoring provides an easy way to change the order of the parameters for methods, indexers, and delegates					◆	◆	◆	◆	◆	◆	◆

Debugging Tools

Debugging tools in Visual Studio 2008 enable you to observe the run-time behavior of your program and locate logic errors

64-Bit Debugging enables you to debug 64-bit applications running on Windows 64-bit computers locally or remotely (remote debugging for Visual C++ only in Standard Edition)

Attach to Local Process enables you to attach the debugger to any process on the local computer

Attach to Remote Process enables you to attach the debugger to processes on remote computers that have been set up for remote debugging (remote debugging for Visual C++ only in Standard Edition)

Autos window displays variables used in the current statement and the previous statement

Breakpoints enable you to tell the debugger that an application should break, pause execution, at a certain point

Breakpoints window lists all breakpoints currently set in your program and displays their properties

Call Browser window enables you to search for function calls, and then browse the search results and easily navigate to the function references in your source code files

Call Stack window displays a list of all active procedures or stack frames for the current thread of execution

Debugger Visualizers create a dialog box or other interface to displays a variable or object in a meaningful way that is appropriate to its data type (Visual Studio includes four: text, HTML, XML, and dataset)

Disassembly window shows assembly code corresponding to the instructions created by the compiler

Dumps enable you to save program information for debugging at a later time

Edit and Continue is a time-saving feature that enables you to make changes to your code during a debugging session, instead of having to stop, recompile your entire program, and restart the debugging session

Error List window displays the Errors, Warnings, and Messages produced as you edit and compile code

Exception Assistant is a debugging tool that provides details about exceptions when they occur, including the exception message, troubleshooting tips, and a task-oriented list of corrective actions to take

Find Symbol Results window lists search results for the Find Symbol tab of the Find and Replace window, the Find All References shortcut menu command in the Object Browser, Class View, or the Code Editor	◆		◆	◆	◆	◆	◆	◆	◆	◆	◆
Immediate window enables you to enter expressions to be evaluated or executed by a development language	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆
Just-In-Time Debugging launches the Visual Studio debugger automatically when a program, running outside Visual Studio, encounters a fatal error					◆	◆	◆	◆	◆	◆	◆
Locals window displays the local variables and their values in the current stack frame	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆
Managed Debugging enables you to debug managed applications, or applications written in languages that target the common language runtime, such as Visual Basic, C#, and Managed Extensions for C++	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆
Memory window displays large buffers, strings, and other data that do not display well in the Watch or Variables window				◆	◆	◆	◆	◆	◆	◆	◆
Mini-dumps contain pertinent data during a crash that show the call stack and symbols, just as if the crash had occurred on the developer's machine while debugging within Visual Studio					◆	◆	◆	◆	◆	◆	◆
Mixed-Mode Debugging enables you to debug a mixed-mode application, which is any application that combines native code with managed code				◆	◆	◆	◆	◆	◆	◆	◆
Modules and Symbols window enables you to load and unload the symbols for a module				◆	◆	◆	◆	◆	◆	◆	◆
MPI Cluster System Debugging enables you to debug parallel programs that run on a cluster of computers communicating through the Message Passing Interface (MPI)					◆	◆	◆	◆	◆	◆	◆
Multithreaded/Multiprocess Debugging is easier with an improved Threads window and other user interface improvements to make multithreaded debugging easier					◆	◆	◆	◆	◆	◆	◆
Native Debugging enables you to debug native applications, which are applications written in C/C++				◆	◆	◆	◆	◆	◆	◆	◆
NTSD Command Support enables you to use the Immediate window for NT Symbolic Debugger (NTSD) commands, which can help with debugging user-mode applications					◆	◆	◆	◆	◆	◆	◆
Object Test Bench enables you to create instances of your project's objects for simple object-level testing						◆	◆	◆	◆	◆	◆
Output window displays status messages at run time	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆

Debugging Tools

Debugging tools in Visual Studio 2008 enable you to observe the run-time behavior of your program and locate logic errors

Processes window shows all processes that you have attached to or launched from Visual Studio

Registers window enables you to see register values change as your code executes with recently changed values appearing in red

Remote Debugging enables debugging of a computer or device from another computer

Script Debugging enables you to find and correct errors in scripts written in VBScript or JScript/JavaScript, including supports for debugging of client-side scripts in ASP.NET pages

SQL-CLR Debugging enables you to debug various kinds of CLR database objects, including stored procedures, triggers, user-defined scalar functions, user-defined table-valued functions, user-defined aggregates, and user-defined types

Step-Into Web Services enables you to attach to a Web service to debug a Web service call

Symbols Server Support enables you to automatically download the proper symbols for various Microsoft operating systems, as well as MDAC, IIS, ISA, and the .NET Framework

Threads window lists all of the threads for the current process and information about them

Tracepoints enable you to create breakpoints with a custom action associated with it

T-SQL Debugging enables you to debug various kinds of T-SQL database objects, including stored procedures, triggers, user-defined functions, and extended stored procedures

Watch window displays the values of selected variables or watch expressions and only updates when execution is stopped at a breakpoint or exception

XSLT Debugger enables you to debug a style sheet, or to debug an XSLT transformation invoked from another application

Settings and Constraints Editor to specify requirements on the hosting environment in the Application Designer, or to specify constraints of the hosting environment in the Logical Datacenter Designer							◆				◆
Synchronize with Datacenter to synchronize deployment diagrams with logical datacenter diagrams							◆				◆
System Design project template to define the current system by adding and connecting systems or applications, which enables a top-down design approach							◆				◆
System Designer to compose applications into systems or reusable subsystems and validate the resulting configurations							◆				◆
Validate Diagram validates the deployment diagram to find constraint violations between the applications and logical servers							◆				◆
Version to assign major and minor versions to diagrams for informational purposes							◆				◆
Web Service Details window to review, define, and edit operations and their parameters for Web service provider endpoints on ASP.NET applications							◆				◆

Add Database Reference to refer to an object in another database from a database project								◆			◆
Advanced Database Tools to validate SQL syntax, execute database queries and scripts, and examine result sets								◆			◆
Custom Data Generators to extend the data generation capabilities of the standard data generators								◆			◆
Data Compare to compare the data between two databases that have the same schema								◆			◆
Data Generation to fill a test database with test data that is appropriate for the schema of the database but unrelated to the production data								◆			◆
Database Refactoring to automatically update references to renamed database schema objects								◆			◆

Database Schema Build & Deployment Tools to deploy a new database, or changes to an existing database, from your database project to a database server								◆			◆
Database Unit Testing to establish a baseline state for your database and then to verify any subsequent changes you make to database objects								◆			◆
Offline Database Schema to make database schema changes in an isolated development environment								◆			◆
Project Version to change the database project between SQL Server 2000 and SQL Server 2005								◆			◆
Schema Compare to compare the schemas of two databases and then decide whether to apply some or all schema objects from the source to the target								◆			◆
SQL Server 2000 project template to create a project that represents a Microsoft SQL Server 2000 database schema								◆			◆
SQL Server 2000 Wizard project template to automate creating a SQL Server 2000 database project, optionally importing a schema from a database, and configuring your build settings								◆			◆
SQL Server 2005 project template to create a project that represents a Microsoft SQL Server 2005 database schema								◆			◆
SQL Server 2005 Wizard project template to automate creating a SQL Server 2005 database project, optionally importing a schema from a database, and configuring your build settings								◆			◆
T-SQL Editor to modify definitions of database objects such as tables, views, indexes, stored procedures, etc								◆			◆

C/C++ Code Analysis tool to identify possible defects in C/C++ source code caused by common coding errors, such as buffer overruns, un-initialized memory, null pointer dereference, memory and resource leaks									◆		◆
Code Analysis Check-In Policy to requires that code analysis is run prior to check-in (This features requires Visual Studio Team System 2008 Team Foundation Server)									◆		◆
Code Metrics to identify complex, difficult to maintain, and error-prone code by measuring class coupling, depth of inheritance, cyclomatic complexity, lines of code, and a maintainability index									◆		◆
Managed Code Analysis tool to analyze managed assemblies and reports information about the assemblies, such as violations of the programming and design rules set forth in the Microsoft .NET Framework Design Guidelines									◆		◆
Spelling Checker with Custom Dictionary Support to spell-check resource strings as well as class, method, and property names									◆		◆

Code Profiling Tools Use the Code Profiling tools to identify performance bottlenecks in your applications	Visual Web Developer 2008 Express Edition	Visual Basic 2008 Express Edition	Visual C# 2008 Express Edition	Visual C++ 2008 Express Edition	Visual Studio 2008 Standard Edition	Visual Studio 2008 Professional Edition	Visual Studio Team System 2008 Architecture Edition	Visual Studio Team System 2008 Database Edition	Visual Studio Team System 2008 Development Edition	Visual Studio Team System 2008 Test Edition	Visual Studio Team System 2008 Team Suite
Application Verifier to quickly find subtle programming errors in C++ applications that can be extremely difficult to identify with normal application testing, such as errors caused by heap corruption, incorrect handle and critical section usage									◆		◆
Compare Reports enables you to compare a report either by using the Performance Explorer or the /diff on options from the VSPerfReport command									◆		◆
Compressed Report Files to generate small compressed report files that open up quickly									◆		◆
Copy Report View Data to HTML enables you to copy and paste rich data (tables with headers and values) from the performance reports									◆		◆
Filtered Analysis to filter performance reports on timestamp, process, thread, and marks									◆		◆
Hot Path to automatically expand the most expensive code path in the call tree and allocation view of the performance report									◆		◆

Line-Level Sampling to determine where in the code of a processor-intensive function the processor has to spend most of its time									◆		◆
Load and Web Test Integration enable you to create performance sessions for Web and Load tests from Test View and Test Results (requires Development and Test Edition, or Team Suite)											◆
Portable CPU Counters decouples some of the performance counters and abstracts common performance counter data									◆		◆
Profiler 64-Bit Support for both the 64-bit applications that run on Windows 64-bit computers and 32-bit applications run on WOW64									◆		◆
Profiler Runtime Control to pause and resume performance data logging to focus data collection on times of interest									◆		◆
Profiling Tools Report to view and analyze application performance problems									◆		◆
Profiling Tools to detect application performance bottlenecks using lower-overhead sampling for relative performance data, or higher-overhead instrumentation for more exact measurement									◆		◆
Report Noise Reduction limits the amount of data in performance reports to help make performance problems more prominent									◆		◆
Runtime Profiling Control window displays a list of marks available to add to the performance report									◆		◆
Stand-Alone Profiler to analyze application performance in the absence of the Visual Studio development environment									◆		◆
Windows Communications Foundation Profiler Support enables profiling of Windows Communications Foundation (WCF) code									◆		◆
Windows Counter Support enables the profiler to collect Windows counters during performance sessions									◆		◆

Associate a Work Item to a Test to establish a trackable relationship between tests and work items (This features requires Visual Studio Team System 2008 Team Foundation Server)						◆	◆	◆	◆	◆	◆
Call a Web Test from a Web Test enables you to modularize Web tests to compose complex Web tests										◆	◆
Code Coverage to measure the effectiveness of tests on a line-by-line or even a block-by-block basis									◆	◆	◆
Code Coverage Results window to view statistics about the elements tested in a test run									◆	◆	◆
Create a Work Item from a Test Result to create a work item directly from a test result, using the Test Results window (This features requires Visual Studio Team System 2008 Team Foundation Server)						◆	◆	◆	◆	◆	◆
Create Private Accessor to regenerate a unit test's private accessors if you modified a private method in the tested code						◆	◆	◆	◆	◆	◆
Create Unit Tests dialog box to select which items to create unit tests for from a list of namespaces and their contents (methods, properties, etc.)						◆	◆	◆	◆	◆	◆
Custom Host Adapters enable you to run tests in an environment other than the default test environment										◆	◆
Easier Load Test Analysis enables you to quickly understand load test results										◆	◆
Generic Tests to wrap external programs and tests that were not originally developed for use in the Team System testing tools										◆	◆
Load Modeling enable you to control the load modeling in load tests that you run										◆	◆
Load Test Results Repository Management to more easily access the repository for load test results										◆	◆
Load Tests to run a series of Web tests or unit tests, which operate under multiple simulated users over a period of time, for both performance and stress tests (for increased-capacity load testing, see Visual Studio Team System 2008 Test Load Agent)										◆	◆
Manual Tests to create tests that are difficult or impossible to automate, such as when the connection between the computer and its power supply is interrupted, or when you want to test for user interface details or behavior, or to refine or examine your test environment at a specific point in the testing process										◆	◆

Manual Test creates a Word or text document for capturing manual test instructions										◆	◆
Master Page creates a Master Page for Web Applications	◆				◆	◆	◆	◆	◆	◆	◆
MDI Parent Form creates a skeleton form for a Windows Forms Multiple Document Interface application		◆	◆		◆	◆	◆	◆	◆	◆	◆
Midl File creates an Interface Definition Language file				◆	◆	◆	◆	◆	◆	◆	◆
Module creates a file for storing groups of functions		◆			◆	◆	◆	◆	◆	◆	◆
Module-Definition File creates a DLL export definition file					◆	◆	◆	◆	◆	◆	◆
Nested Master Page creates a Master Page which inherits from another Master Page					◆	◆	◆	◆	◆	◆	◆
Ordered Test creates a test to execute a set of existing tests in an order you specify										◆	◆
Outlook Form Region creates a class for creating an Outlook form region						◆	◆	◆	◆	◆	◆
Performance Wizard creates a performance session using the wizard									◆		◆
Property Sheet creates a Visual C++ project property sheet file				◆	◆	◆	◆	◆	◆	◆	◆
Registration Script creates an Active Template Library registration script file					◆	◆	◆	◆	◆	◆	◆
Report creates an empty Report file for creating a report using Microsoft reporting technology					◆	◆	◆	◆	◆	◆	◆
Report Wizard creates a new report using Report Wizard					◆	◆	◆	◆	◆	◆	◆
Resource File creates a file containing Win32 resources					◆	◆	◆	◆	◆	◆	◆
Resource Template File creates a file that contains Win32 resource templates				◆	◆	◆	◆	◆	◆	◆	◆
Resources File creates a file for storing managed resources					◆	◆	◆	◆	◆	◆	◆
Ribbon (Visual Designer) creates a control that provides a visual designer for basic Ribbon customization tasks						◆	◆	◆	◆	◆	◆
Ribbon (XML) creates a class for creating basic and advanced Ribbon customizations by using XML						◆	◆	◆	◆	◆	◆
Service-based Database creates an empty SQL Server database for service-based data access	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆	◆

Splash Screen creates a form preconfigured for use as a splash screen		◆			◆	◆	◆	◆	◆	◆	◆
SQL Server Database creates an empty SQL Server database	◆				◆	◆	◆	◆	◆	◆	◆
Static Discovery File creates a Web Service static discovery file					◆	◆	◆	◆	◆	◆	◆
Style Sheet creates a cascading style sheet used for rich HTML style definitions	◆				◆	◆	◆	◆	◆	◆	◆
System Diagram creates an empty diagram for designing a system containing applications and other systems in the solution							◆				◆
Test Run Configuration creates a configuration file with settings about how test runs shall be processed						◆	◆	◆	◆	◆	◆
Text File creates a plain text file	◆	◆	◆		◆	◆	◆	◆	◆	◆	◆
Transactional Component creates a class for creating transactional logic					◆	◆	◆	◆	◆	◆	◆
Unit Test creates an empty unit test class declaration						◆	◆	◆	◆	◆	◆
Unit Test Wizard uses a code generation wizard to create a unit test						◆	◆	◆	◆	◆	◆
User Control creates a reusable Windows Forms control		◆	◆		◆	◆	◆	◆	◆	◆	◆
WCF Service creates a class for creating a WCF service	◆				◆	◆	◆	◆	◆	◆	◆
Web Configuration File creates a file used to configure Web Application settings	◆				◆	◆	◆	◆	◆	◆	◆
Web Content Form creates a form for Web Applications that is built from a Master Page					◆	◆	◆	◆	◆	◆	◆
Web Form creates a form for Web Applications	◆				◆	◆	◆	◆	◆	◆	◆
Web Service creates a visually designed class for creating a Web Service	◆				◆	◆	◆	◆	◆	◆	◆
Web Test opens Internet Explorer to record a Web test										◆	◆
Web User Control creates an ASP.NET server control created using the visual designer	◆				◆	◆	◆	◆	◆	◆	◆
Windows Form creates a blank Windows Form		◆	◆	◆	◆	◆	◆	◆	◆	◆	◆
Windows Script Host creates a file containing script that is run a Windows program					◆	◆	◆	◆	◆	◆	◆
Windows Services creates a class for creating Windows services					◆	◆	◆	◆	◆	◆	◆
WPF Custom Control creates a WPF customer control		◆	◆		◆	◆	◆	◆	◆	◆	◆
WPF Flow Document creates a dynamically formatted XAML document		◆	◆		◆	◆	◆	◆	◆	◆	◆
WPF Page creates a blank WPF page		◆	◆		◆	◆	◆	◆	◆	◆	◆
WPF Page Function creates a WPF page function		◆	◆		◆	◆	◆	◆	◆	◆	◆
