

Jumpstart your Education Data Management Implementation

Dell EDM Student Enrollment Jumpstart for Higher Education

“In-memory analytics is a game-changing leap forward. With real-time data at our advisors’ fingertips and personalized, useful information in the hands of our students we will be able to help in their academic careers.”

Vince Kellen CIO,
University of Kentucky

The Challenge

The primary goal of every education institution is to see students learn, grow, graduate and succeed in college, university level and in the workforce. There are countless data points for students, but vital records are often housed in various formats and across diverse systems, with no way to consolidate them. Embarking on that data driven journey can take considerable time and effort.

The Dell EDM Student Enrollment Jumpstart Solution

EDM is a decision support system designed to meet and exceed institutional goals while addressing federal, state, and organizational mandates. The EDM Student Enrollment Jumpstart provides a quick on-ramp to data driven decision making by focusing initially on data from the student information system and a core set of data models, typically in under 3 months.

While providing the full complement of EDM capability, the Jumpstart focuses on the tangible benefits of integrating data related to enrollment, demographics, special population review, end of course grades, and staff data.

The EDM Jumpstart is comprised of a robust data model, integration business logic for common systems in use by educational institutions, and starter dashboards. Get started with the following:

- Summary Enrollment
- Demographics Analysis
- Student Profile & History
- End of course grades
- Instructor and Class Profiles
- The ability to expand with more data analytics capability as your needs grow! Add data integration and reporting for Discipline, Attendance, Assessments, At Risk identification and more.

Key Benefits

- Implements the foundations of EDM in 3 months
- 360 degree view of the student, class, campus and district
- Jumpstarts the process of education insight with prebuilt data models, data integration adapters and 6 quickstart dashboards and KPIs
