#### IT Consulting: Windows 7 Readiness Assessment

The Dell Windows 7 Readiness Assessment is designed to identify application compatibility, hardware compatibility and migration readiness, and to provide the recommendations needed to help make your transition to Windows 7 as smooth as possible.

Access hardware readiness	Determine if Windows 7 can run and perform on your current installed base by having Dell sample your hardware inventory, assist you in setting a minimum hardware specification and measure and report current inventory against tiered compatibility standards.
Review software compatibility	Compatibility is assessed on your applications using automated discovery tools to catalog a sample of software titles in your client PC environment. Dell identifies issues with applications that cannot be remediated and provides reports and advice on best practices for testing custom applications for Windows 7 compatibility.
Prepare your end users	Dell helps prepare your end users for the impact of new features of Windows 7 by evaluating your training plans and recommending effective training strategies.
Access your infrastructure	Dell helps determine the impact of Windows 7 data security features on your existing infrastructure. The impact of Windows 7 Group Policy Objects (GPOs) is assessed and advice is provided on how to take advantage of GPO features.
Complete your migration plan	Dell provides project plan templates for use in developing your deployment project plan. Hardware refresh plans, version guidance, imaging strategy, and completed deployment plans are evaluated based on your Windows 7 licensing terms, security requirements, and deployment needs.
