IX. PERFORMANCE DATA

System Configuration

The Energy Consumption and Declared Noise Emissions data is based on a configuration including:

Processor	Intel, Pentium P6300, 2.27GHz
Hard Drive(s)	500 GB
Memory	8G (4G*2)
Video Card	DSC
RMSD / Optical Drive	GS30N DVDRW
Power Supply (Internal or External)	External
Power Supply Size in Watts	90W
Power Supply Efficiency Level	V

Energy Consumption⁴

Energy efficiency benefits the environment and lowers the total cost of equipment ownership by reducing power consumption. Dell offers energy calculators that help estimate power needs, potential emissions avoidance and potential cost savings. Click [here](#) for Dell's Client Energy Savings Calculator, Data Center Capacity Planner, and Monitor Power Savings Calculator. Information on Energy Efficiency is available [here](#)

Client Computers:

Service Level	Energy Consumption (Wattage)	BUT Calculation	Description of Service Level
*Maximum	52.14	178.32	The system is running programs to maximize the power consumption.
Idle Mode	6.84	23.39	As specified EPA Energy STAR computer mode.
S3 "Sleep" Mode	1.11	3.79	Suspend-to-RAM (low-power/sleep mode)
Off	0.51	1.75	System is turned off but still connected to its AC power source. If the product is a computer, the Low Power Mode feature is enabled via BIOS if available.
External Power Supply (If applicable)	0.23	0.79	AC adapter connected to mains with system detached otherwise known as "No-load" condition.

*Maximum **Energy Consumption** results are based solely upon the laboratory testing of the **System Configuration** listed above.

Energy consumption is tested at 230 Volts / 50 Hz. Heat dissipation is calculated based on the measured watts, assuming the service level is attained for one hour. BTU is calculated based upon the wattage reading taken in the given mode. To convert Watts to BTU, (1 Watt = 3.42 BTU)

If applicable, iAMT increases the power consumption even during the off state. The power measurements reported above are valid only if the iAMT Management Engine (ME) is set to "ON" in S0 state only (S0 is simply power-on, non-sleep, working state).

ErP compliance is tied to the CE mark.

Declared Noise Emissions in accordance with ISO 9296 (tested in accordance with ISO 7779)

⁴ This document is informational only and reflects laboratory performance. Your product may perform differently, depending on the software, components and peripherals you ordered. Accordingly, the customer should not rely upon this information in making decisions about electrical tolerances or otherwise. No warranty as to accuracy or completeness is expressed or implied.
